fear(less)

an architectural response to fear in the city

Marten Dashorst, Architecture, Explore Lab 5, 2007-2008 tutors: Leontine de Wit, Elise van Dooren, Isabelle Doucet

The result is an increase in the privatization and the consumption of urban space. Fences that become display stands, mobile bars that designate areas of consumption.

Someday the government will have to be held responsible for what it asks of us and vice versa is one of the recurring themes in the design.

The street facade, functioning as a container, is similar with in the city, opens up at certain points. Whereas these are rarely put there as a filter function, in my building they form a connecting part of the public space.

Fences that become display stands, mobile bars that designate areas of consumption.

Someday the government will have to be held responsible for what it asks of us and vice versa is one of the recurring themes in the design.

The station hall is designed as a continuous form providing a visibility unfamiliar to the users of the metro. This collection of three of the sections is already visible. Indeed, often metro stations are connected from any kind of public transport. The street facade, functioning as a container, is similar with in the city, opens up at certain points. Whereas these are rarely put there as a filter function, in my building they form a connecting part of the public space.
