

Pyropower

Bringing people together to build a better community

Pyropower develops carbon negative solutions for communities around world. Pyropower's solutions are most suited for Community Supported Agricultures (CSAs) in European market for Pyropower's introduction in the European market. The project proposes implementing biochar systems for increasing the yield of CSA farms, for waste management and for climate change action. The project also proposes development of a digital platform which facilitates an exchange of participants of a CSA. The exchange leads to more value generation and psychological well-being for the participants of a CSA.
