Introduction
Everybody has a dream... So has Benny. He wants to build his spaceship but he doesn’t know how. We, the engineers, are here to help. As always... :)

Materials and Methods
As poor students we could only use recyclable materials, eco-friendly ones, such as paper, plastic bottles, plastic bags, string, hot glue, tape, water and a lot of ambition.

Results
Disguised to fool the space creatures, Benny is travelling without a nose cone and is equipped with two parachutes attached to the two opposite fins.

Conclusion
No matter whose rocket will fly higher and stay longer in the air, with collaboration all goals can be achieved. We hope Benny will reach the LEGO space station and meet the UFO out there... :)
