

The Blue Heart

A territorial envisioning of evolutionary agro-urban ecologies

1. The Blue Heart

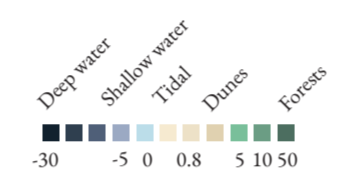

Ecological integrity (MSA indicator)*

- Most of endogenous species remain unaffected by human interference
- All of endogenous species were extinct by human interference

Migration routes

- East Atlantic Flyway
- Fish migration route
- Migration zone extent of European eels
- Migration zone extent of Atlantic Salmon

2. Speculative endogeneity

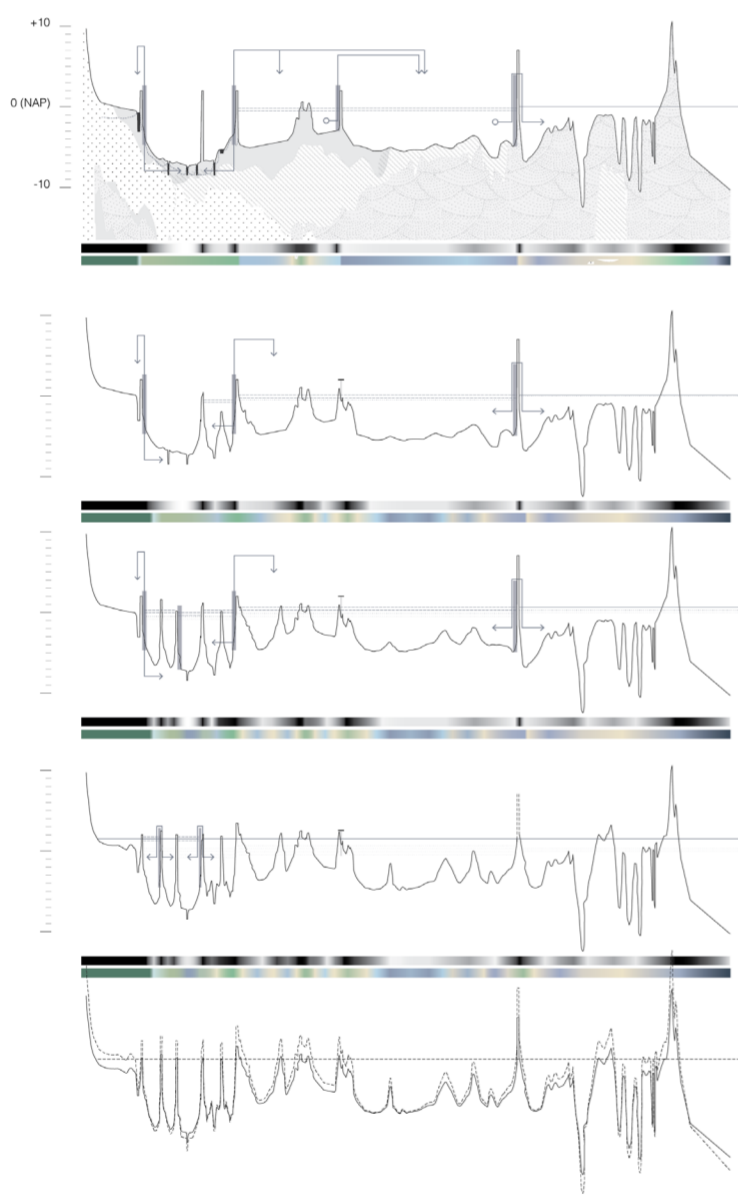

3. Composition

- Intertidal zones (from 800 until 1850)
- Intertidal zones (Wadden Sea)
- Reclaimed land
- Urban expansion post-Afsluitdijk
- Urban areas pre-Afsluitdijk

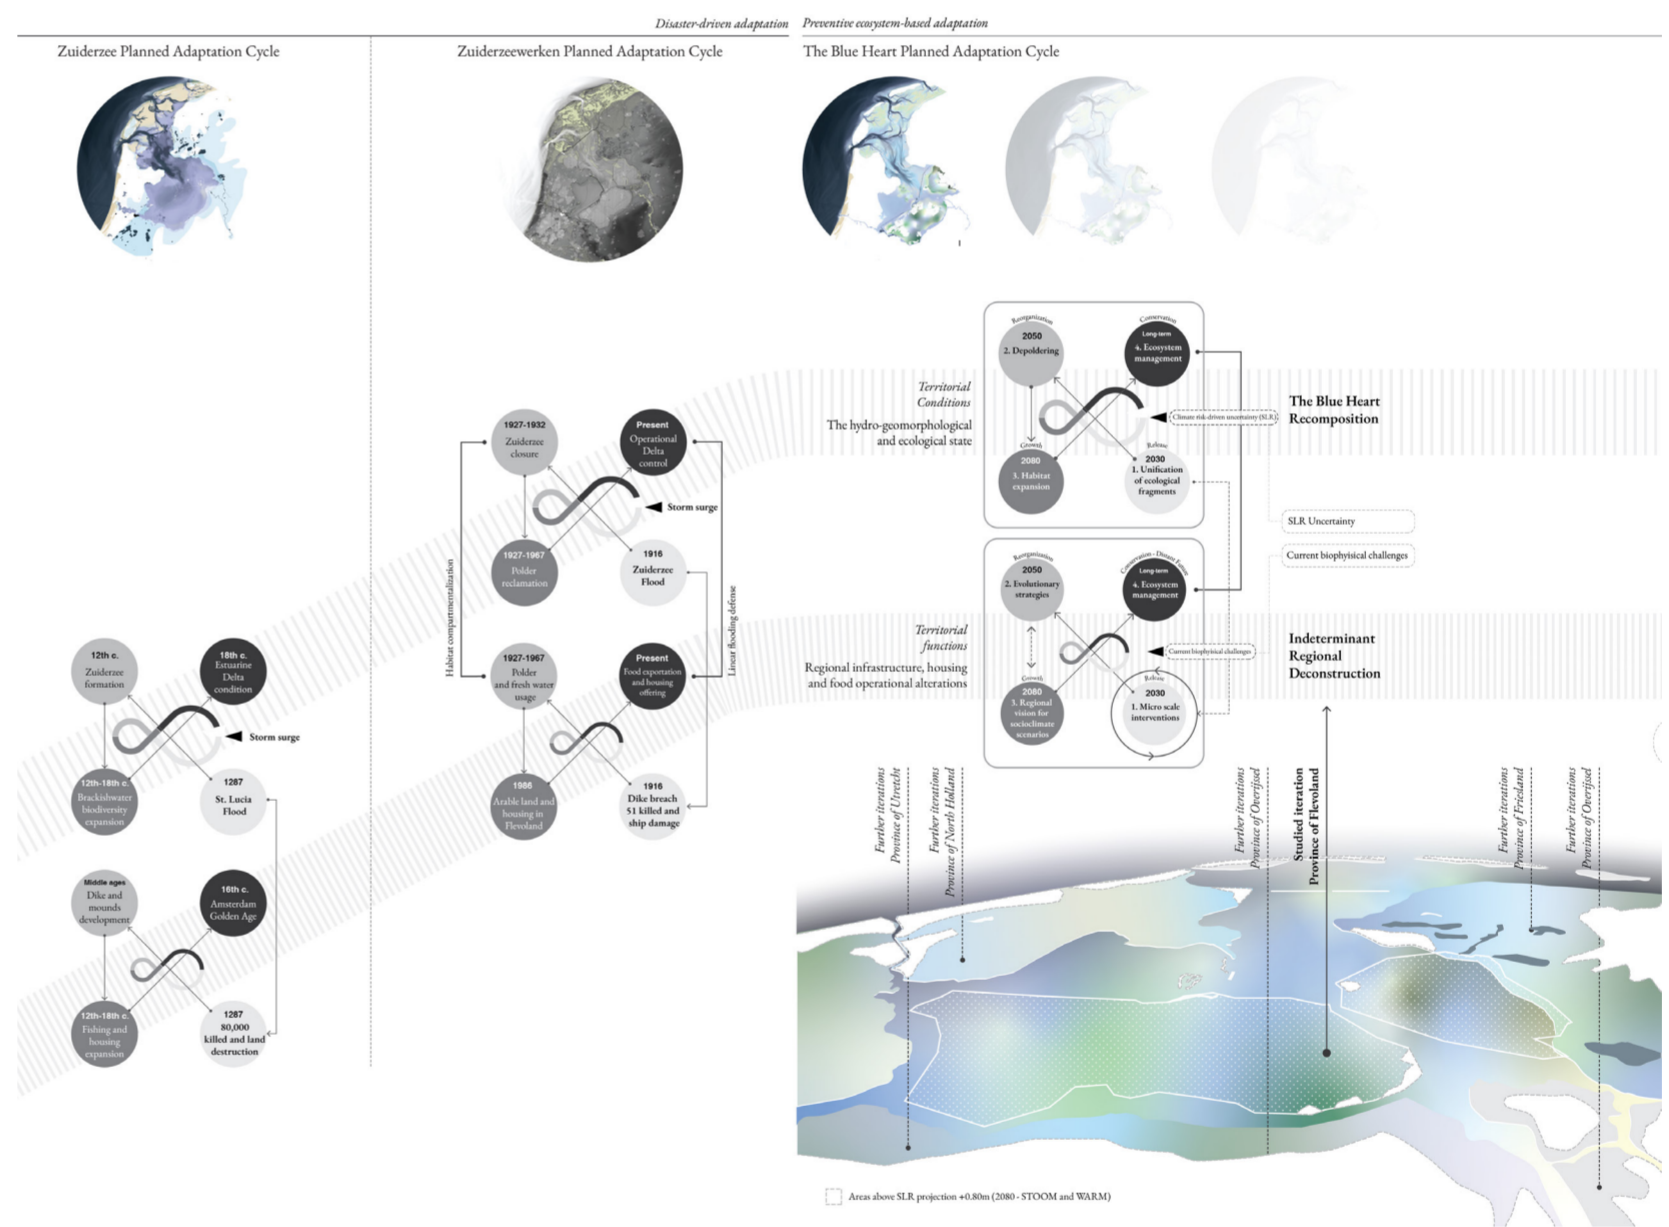

4. Fragments

5. Desired future

Territorial recomposition

The Blue Heart planned ecosystem-based adaptation cycle

Agro-urban ecological interfaces

- Fresh water storm basins
- Housing
- Food
- Dikes
- Waterway routes
- Railway
- Primary access
- Secondary access
