

UNEC Building- idea development
URBAN CONNECTION

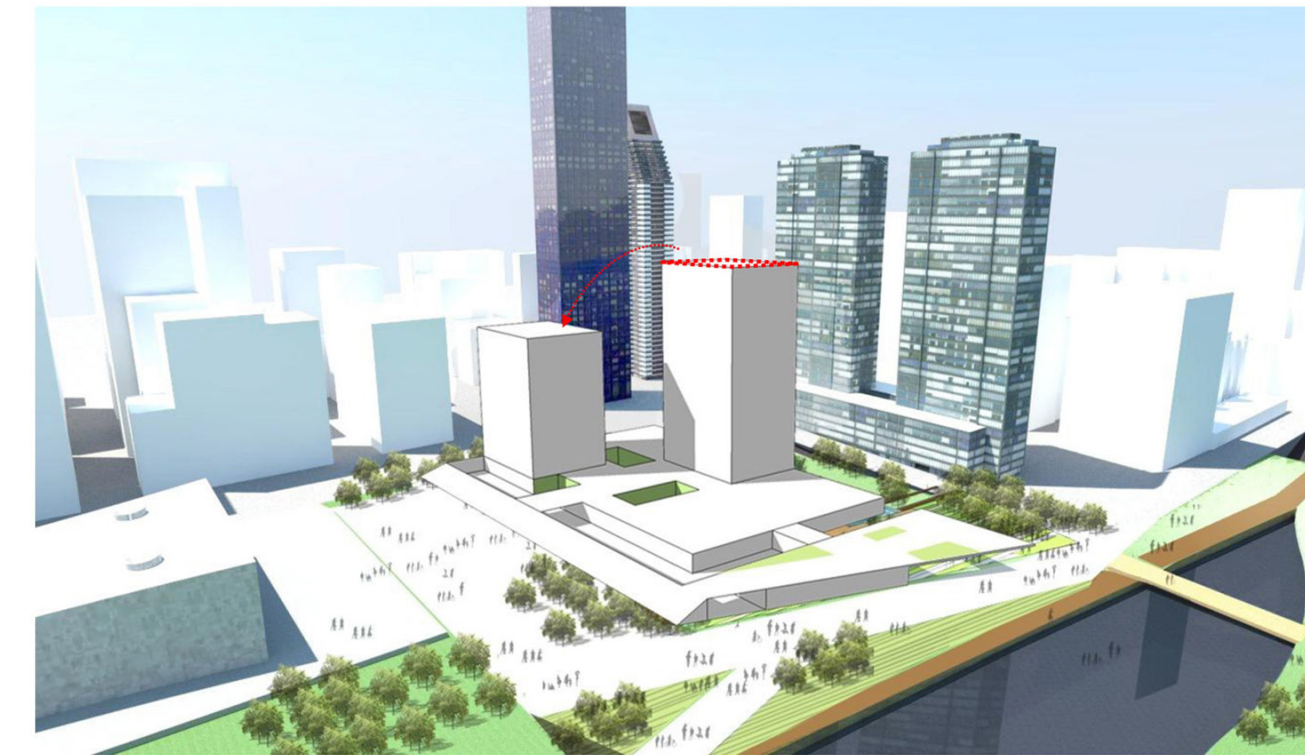

1. Follow the two urban axis and the typology-Tower+ Base

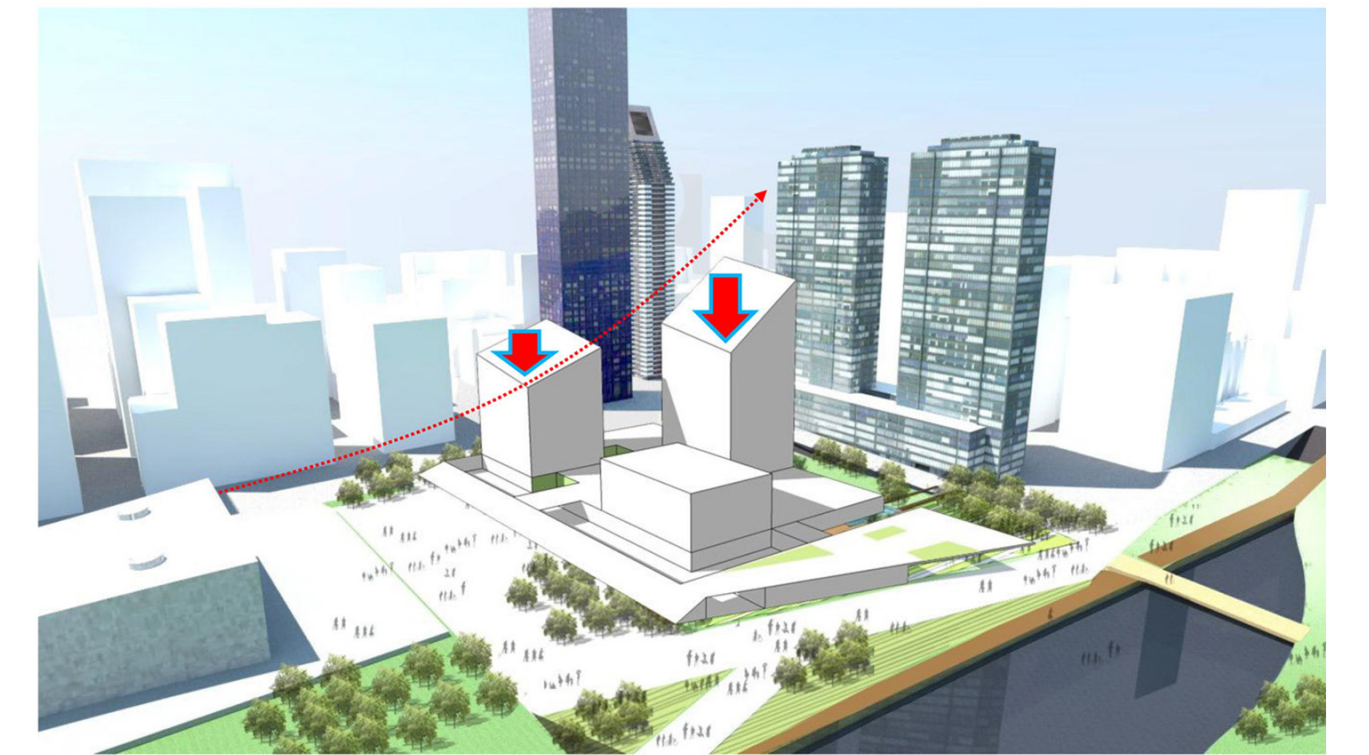

2. Move the tower to the city side- but still no contrast to the dense city

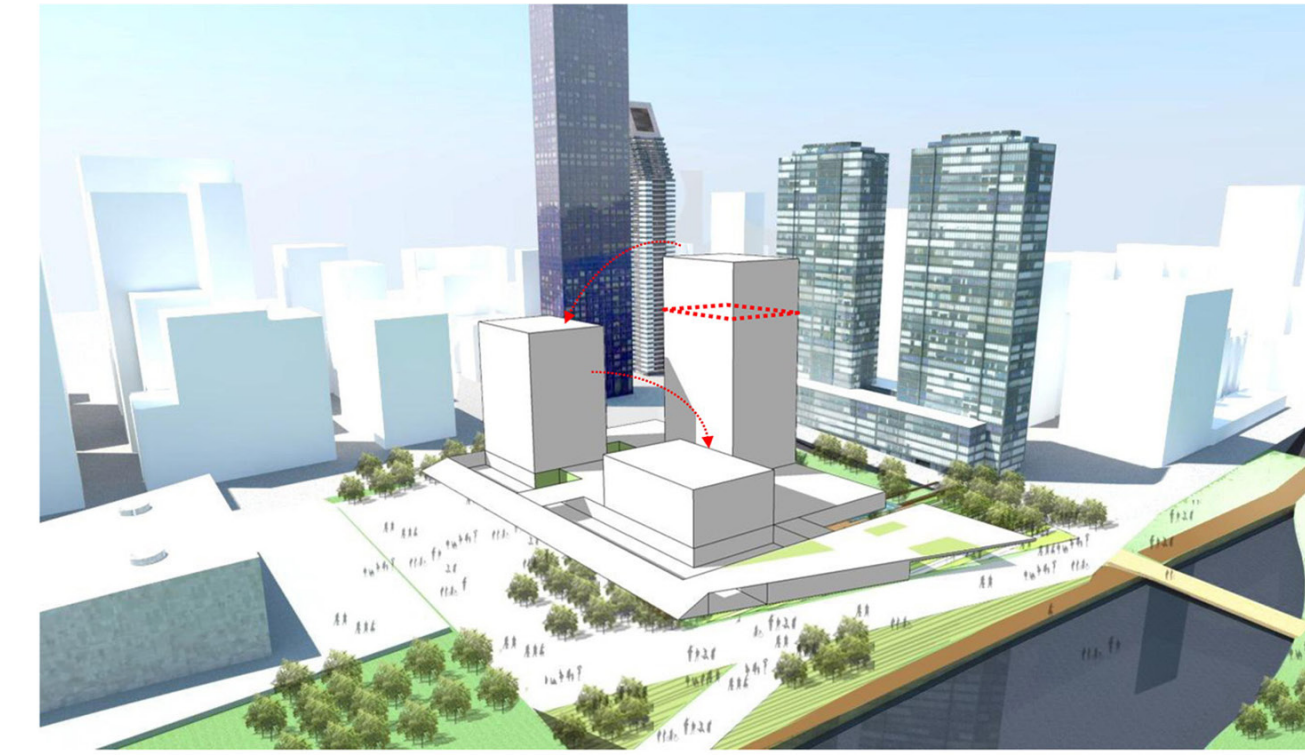

7. Push down the third tower emphasize the main entrance axis

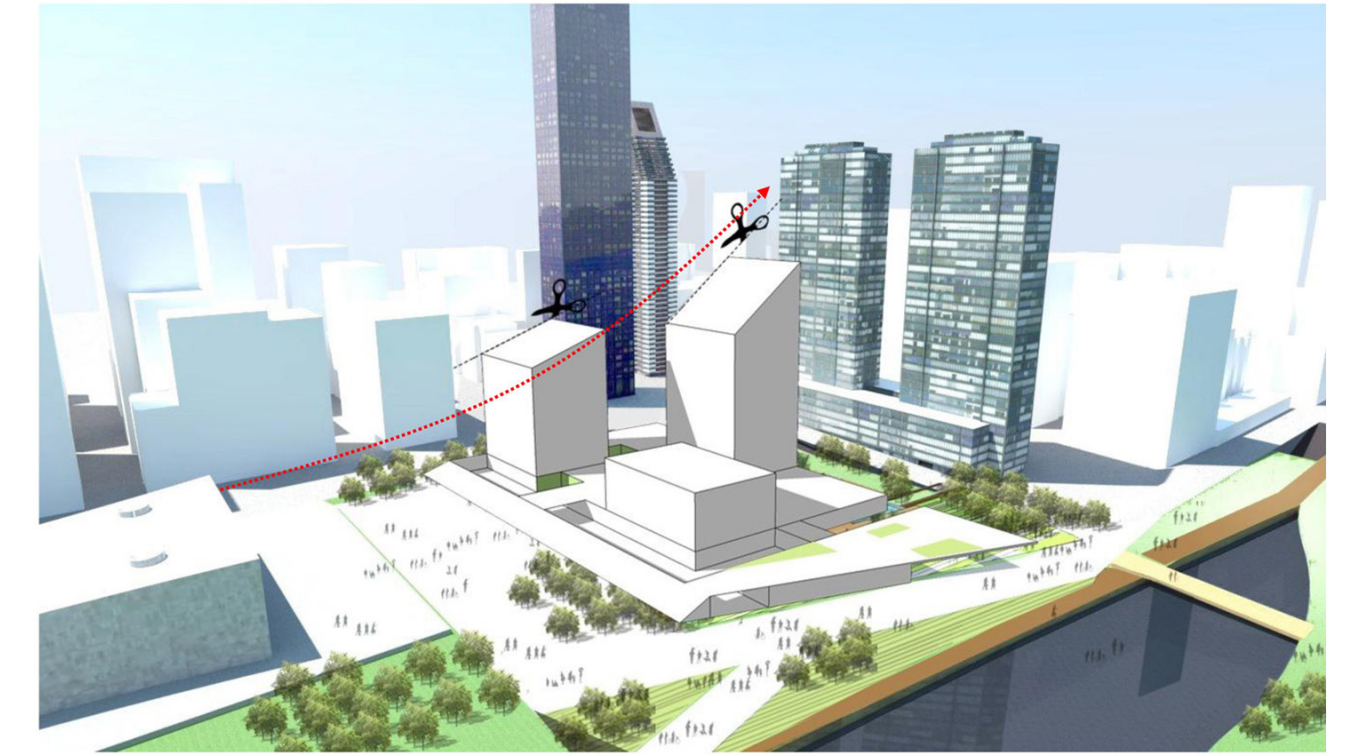

3. Cut the tower into two towers- more friendly in the volume

6. Push down the top and face more to the East river for the better skyline

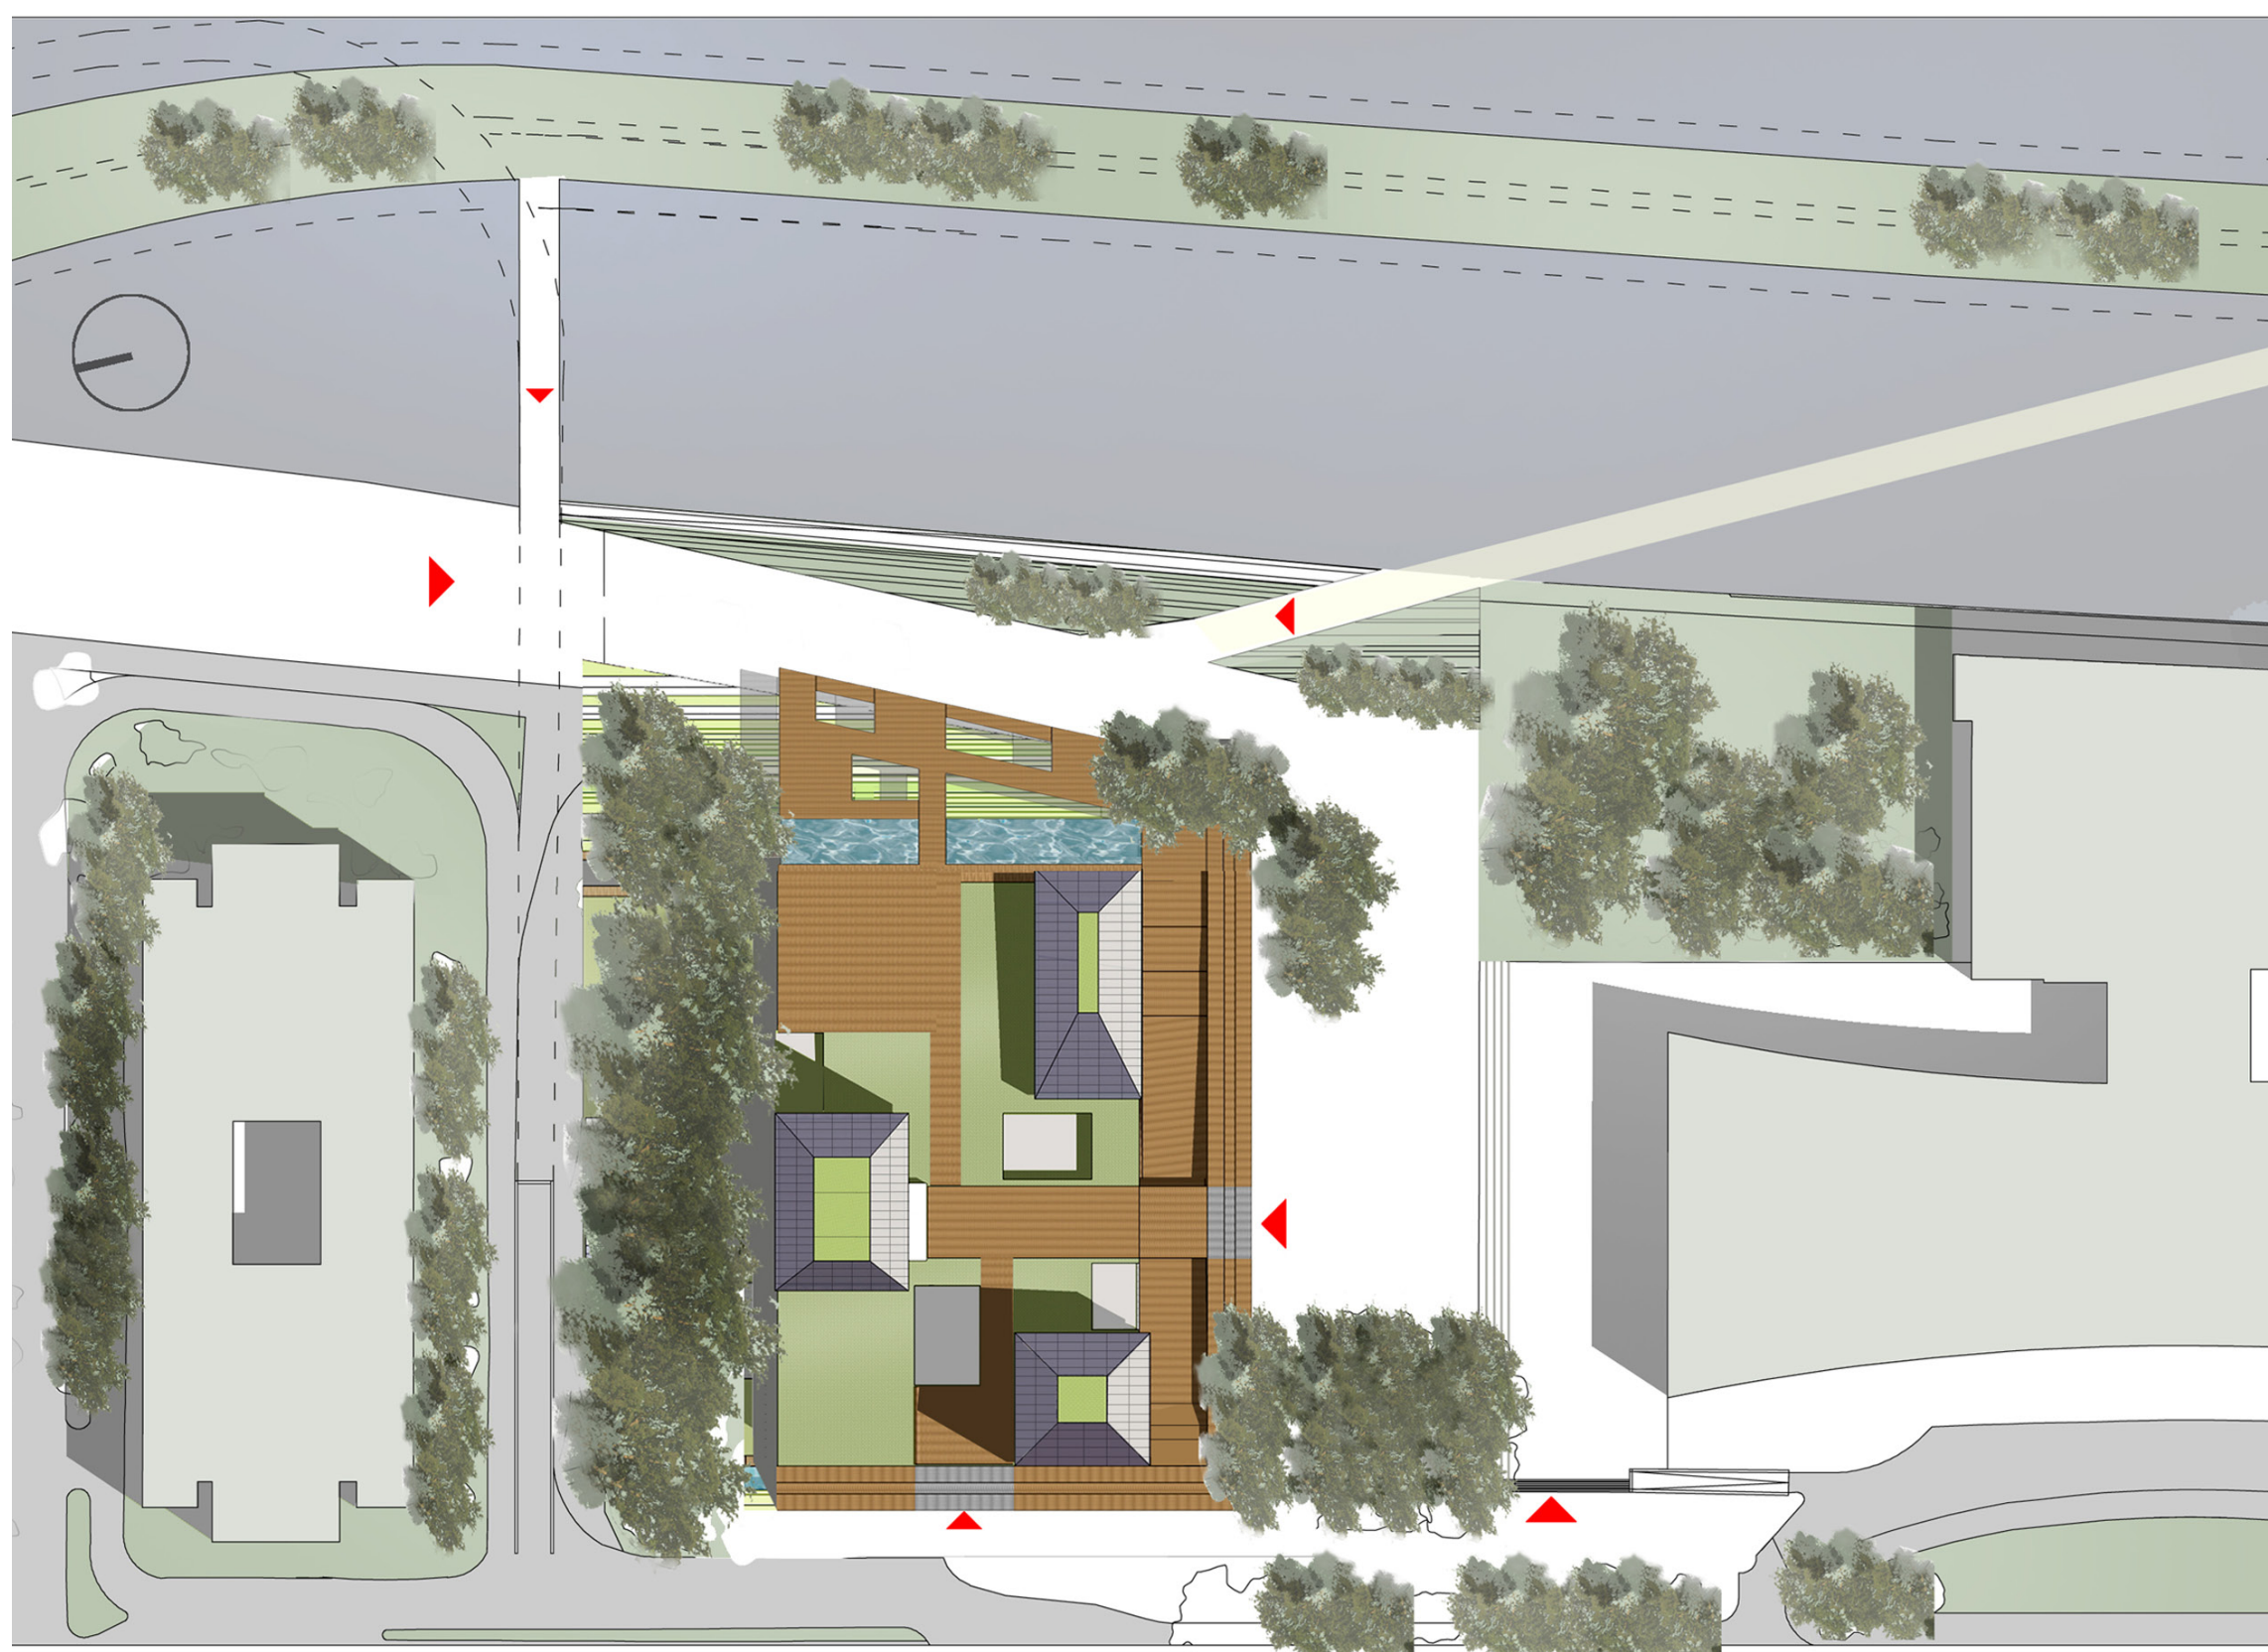

4. Cut the tower into three - more friendly and balanced in the volume

5. Cut the tower top and more urban connected in the context in UN site

Theme: **Patios** inside and outside space

Park for the public:

In Manhattan, New York, the city image is the skyscraper. The city is famous for its building density, and there is not much open public park often used except the Central Park and the High line. As an opportunity we are considering to make the UN site as a park open to the public in the sustainable view of the urban scale.
