

SMART INDOOR GROWING SYSTEM

DESIGNED TO GROW WITH YOU AND YOUR PLANTS

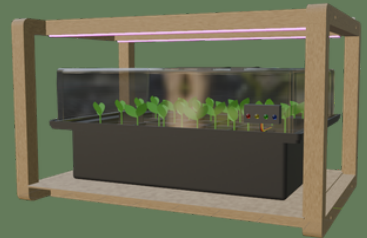

The Smart Indoor Growing System is a compact, height-adjustable setup designed for novel home gardeners. Its frame grows with your plants, allowing seedlings to develop fully until they're strong enough to move outdoors. In addition, built-in pink LED lights support healthy root and leaf growth.

The system includes a versatile growing tray that works for different growth stages, accommodating both multi-compartment seed trays and P9 pot.

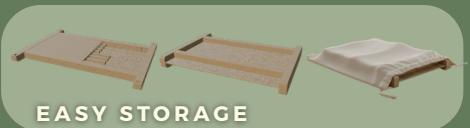

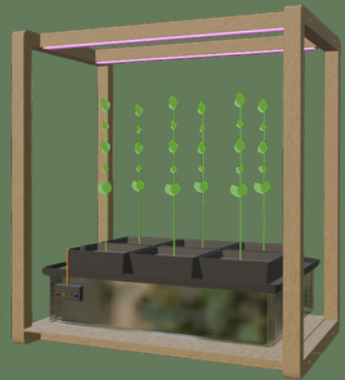

A moisture sensor shows whether the soil is too dry, slightly moist, just right, or too wet, making it easy to know exactly when to water.

The app guides you step by step through sowing and plant care, provides monthly tips, and even lets you connect with other users to share advice and experiences.

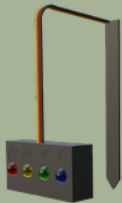

Overall, this smart system combines convenience, guidance, and adaptability, making it an ideal solution for anyone who wants to grow healthy plants at home with minimal hassle.
