Automation

In polder verrees nieuw SCHIPHOL

Automatisering maakt het passagiers gemakkelijk

Vrijdag 28 april zal koningin Juliana het nieuwe Schiphol officieel openen. Zij zal met de genodigden in een lege luchthaven staan, want het eigenlijke moment van ingebruikname valt in de nacht van 7 op 8 mei. Dan zal van het ene uur op het andere het oude al buiten gebruik worden gesteld en het eerste toestel zijn passagiers afleveren in het nieuwe stationsgebouw dat enkele kilometers verder op in de Haarlemmermeerpolder verrees.

ONDER zich aan de buitenlucht te hoeven bloot te stellen zal de luchtpassagier dan vanuit zijn huiskamer naar verre steden kunnen reizen. Indien hij een garage heeft, die aan zijn woning grenst zal hij van daar uit zijn auto naar de luchthaven rijden en zijn wagen stallen in een van de twee parkeergarages onder het hangar. Vandaar gaat hij met de lift naar de vertrekhal op de eerste verdieping; vervolgens door spoortentcontrole via de pieren en de Aviobridgen het vliegtuig in. Hij zal pas op het vliegveld van naast de eerste buitenlucht opsmuiven. Dat is een van de mogelijkheden, die het nieuwe Schiphol biedt. Een haven, die zich met de modernste ter wereld kan meten, die in vier jaar tijd uit de grond is gestampt en waarvan de totale bouwkosten globaal f 400 miljoen bedragen. Het gehele luchthavencomplex wordt ingesloten door vier start- en landingsbanen (het zogenaamde tactische uitbreidingsplan). Een baan aan de overzijde van de baan no. 4 moet nog worden aangelegd. Deze banen, elk 3300 meter lang, zijn een meter dik en samengesteld uit een sandwich van diverse soorten beton en zand.

nieuwbureau ir. F. C. Weger te Rotterdam en prof. M. Duintjer in Amsterdam.

Kritiek

De opzet van het nieuwe stationsgebouw is veel rationeler dan die van het oude, dat van kort na de oorlog dateert toen men nog geen prognoses kon maken over de ontwikkeling van de luchtvaart anno 1967. Het maken van prognoses is trouwens nog moeilijk, want steeds blijkt de ontwikkeling veel sneller te gaan dan verwacht werd. Dit heeft tot gevolg, dat het ontwerp van de gehele nieuwe luchthaven kritiek ontmoet van deskundige en minder deskundige personen, die van mening zijn dat er nog niet ver genoeg in de toekomst is gekeken. Daar tegenover kan men stellen: op

tere oppervlakte heeft dan Kennedy Airport in New York. Er is ook ruimte voor een hotel gereserveerd, maar over de bouw daarvan is nog niets definitief.

Uitgangspunt bij het ontwerpen van het nieuwe stationsgebouw was: de loopafstanden voor de passagiers zo kort mogelijk te houden en voor doorgaande reizigers snel overstappen mogelijk te maken. Met het aangrenzende bemanningencentrum is het stationsgebouw ongeveer zo groot als de nieuwe Nederlandsche Bank op het Frederiksplein. Een 800 meter lange op- en afrit maakt de vertrekhal voor reizigers toegankelijk. Daarover kan men met de auto tot voor de ingang van de vertrekhal op de eerste verdieping rijden. De reiziger bevindt zich dan op hetzelfde niveau als de cabinevloer van het vliegtuig waarmee hij zal vertrekken.

ze pieren kunnen 25 vliegtuiger tegelijk worden opgesteld, maar na eventuele verlenging van de twee zijpielen is er plaats voor 43 toestellen. Op de middenpier is een lopende hand als een soort voortschuivend trottoir, zodat de passagier het lopen van deze afstand (200 meter), ook nog wordt

vervoerd met busjes en het overstappen op het winderige platform, zoals dat tot nu toe op Schiphol gebruikelijk was, behoort tot het verleden. Het dak van de pieren is toegankelijk voor uitverhuurs en bezoekers. Men kan op die manier heel dicht bij de vliegtuigen komen. Door de toegenomen druk-

Automation makes it easy for passengers

Schiphol is very dependent on technology for flows, over all functioning and security

And so are we...

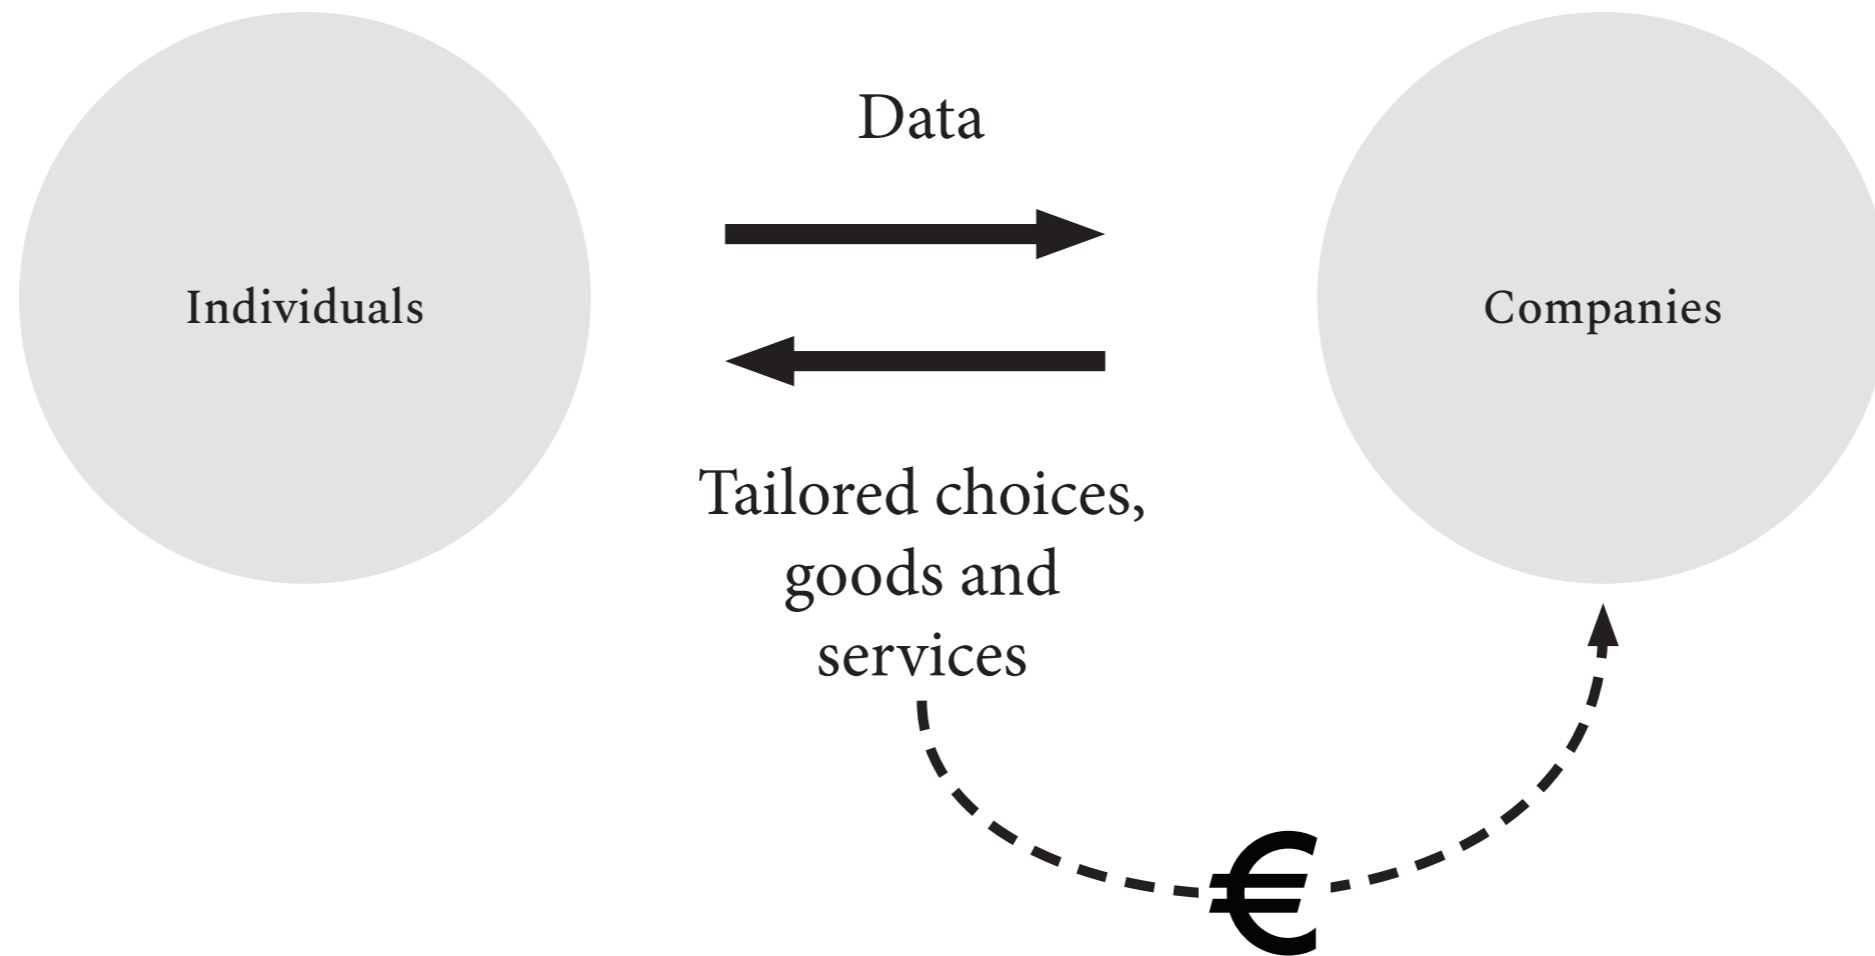

Possibilities of the digitalization

Data does have **value** in **understanding, predicting and influencing** individual behavior and decisions.

Value of data

Value out of data

335,5 billion euro
2018

769 billion euro
2025

European data economy

Data is the new Oil

There is **tremendous good** that data sharing brings about. But data sharing raises **legitimate concerns** about economic and national security, citizen and consumer privacy, and loss of intellectual property.

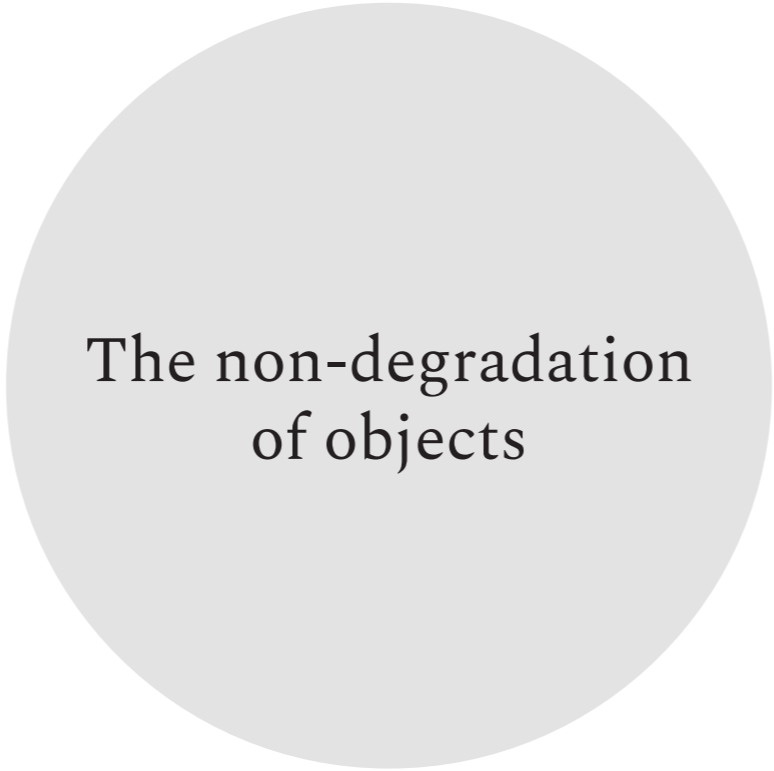

Criminalization of data

Nature has placed mankind under the governance of two sovereign masters, **pain and pleasure**. It is for them alone to point out what we ought to do, as well as to determine what we **shall do**.

Pleasure gained from crime

vs.

Pain of punishment

Cyber crime

What is a Cybercrime Prison?

RESEARCH

History of punishment and case studies

HISTORY OF PUNISHMENT

Literature research

WHAT IS PUNISHMENT?

1. It is imposed by an authority;
2. It deprives the offender of something valuable;
3. It is in response to an offence

**HOW DID METHODS OF
PUNISHMENT DEVELOP OVER
THE YEARS?**

<1700s	1770s	1850s	1950s	1980s	2018
No prisons: only imprisoned awaiting punishment	House of corrections Introduced in 1560s Mass incarceration Dormitory	Cellular prisons Solitary confinement Individual cell 1 type of prison	Abolition of solitary confinement Individual cell More types of prison based on security level	Individual cell in department	Individual cell Ankle cuff Digitalization
		Curing Moral diseases			Efficiency
Physical punishment		Psychological punishment		Reducing harmful impact of detention	Future?

Crime based punishment | Criminal based punishment

History of punishment

1600s: corporal punishment & house of corrections

1700s: suspending freedom as punishment

Early 1800s: introduction of the prison cell

Late 1800s: architecture as disciplinary tool

Late 1900s: isolation to resocialization

2000s: resocialization to efficiency

Typological development

HOW DOES PUNISHMENT WORK FOR CYBERCRIME?

1. It is imposed by an authority;
- 2. It deprives the offender of something valuable;**
3. It is in response to an offence
