

'Facilitating Dutch energy startups to expand their business in India'

WHY?

HOW?

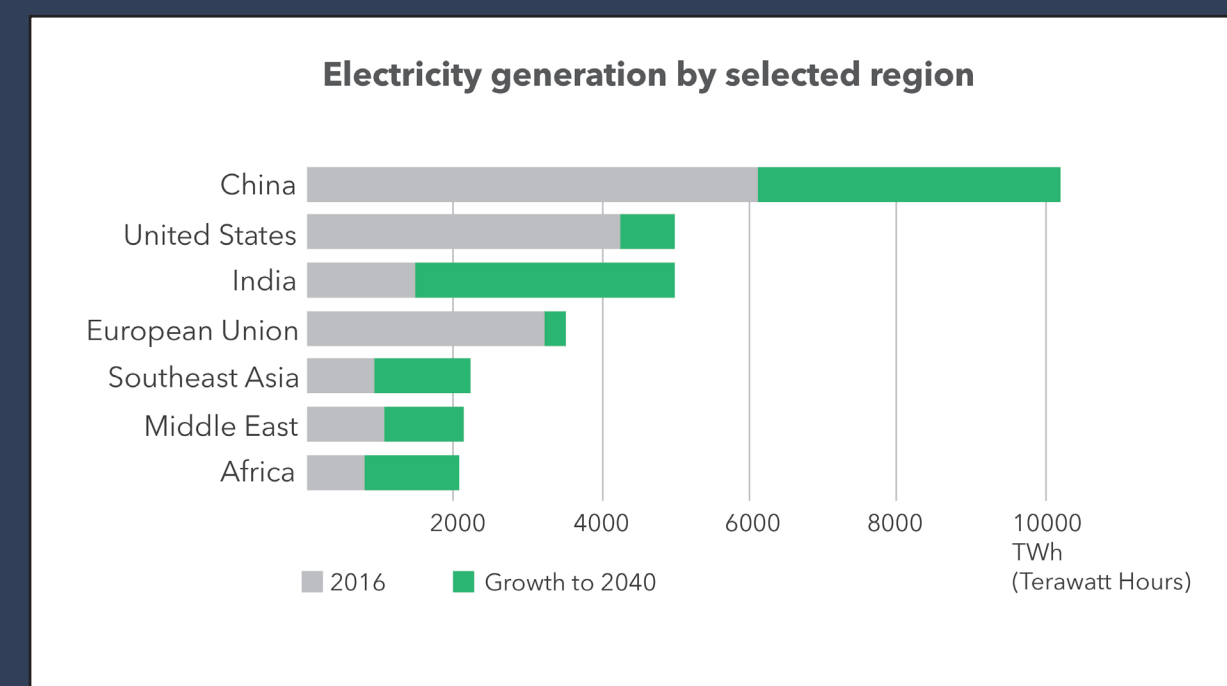

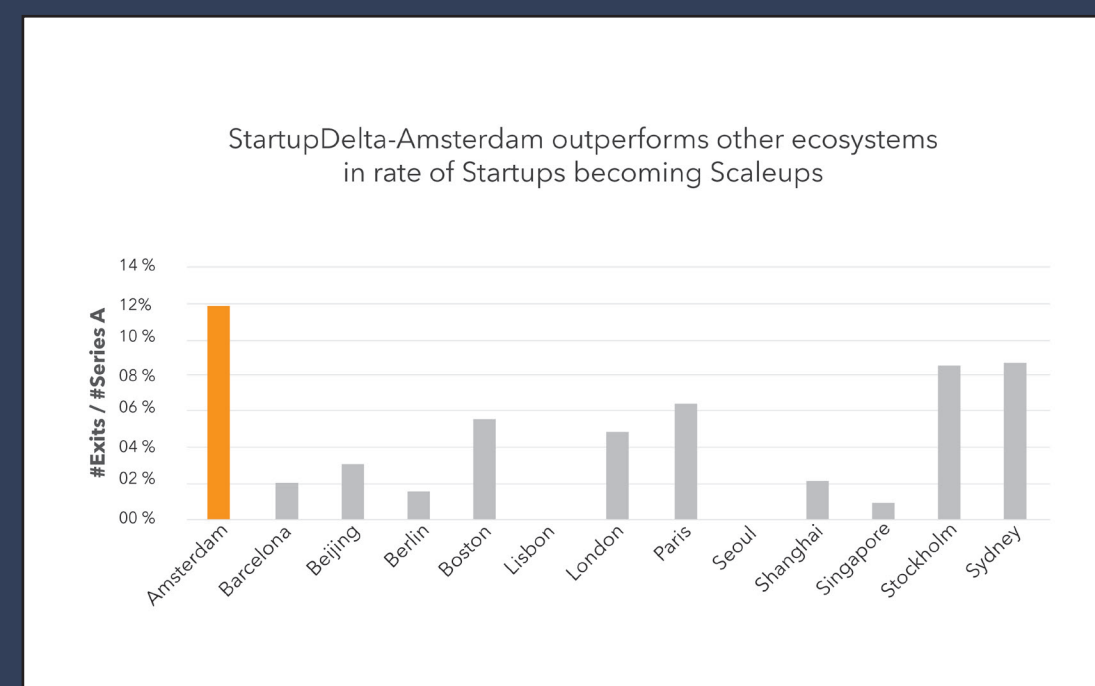

Around **285** Startups in clean energy domain

One of the largest market for clean energy innovations

Venturedam provides 'Projectile framework' to de-risk the startup expansion process.

The framework helps to test the most critical assumption for the success of the business in the Indian market.

The Government of India and the Netherlands initiated the Dutch-India startup exchange initiative to facilitate the startup expansion by providing a bureaucratic support.

The framework helps to identify and attain the opportunity in the market with a balanced consideration of desirability, viability, and feasibility.
