Corrigendum

Corrigendum to “LCA methodological choices and environmental impacts performance of an integrated seawater desalination and brine treatment system” [Sustain. Prod. Consump. 61 (2025) 338–355]

Rodoula Ktori ^{a,*}, John A. Posada ^{a,1}, Mark C.M. van Loosdrecht ^a, Dimitrios Xevgenos ^b^a Department of Biotechnology, Delft University of Technology, Van der Maasweg 9, 2629, HZ, Delft, the Netherlands^b Department of Engineering Systems and Services, Delft University of Technology, Jaffalaan 5, 2628, BX, Delft, the Netherlands

The authors regret that an inconsistency was identified between the results presented in Fig. 6 and the inventory data reported in Tables S.11 and S.12 of the Supplementary Information. This discrepancy arose because an additional scenario from a previous version of the manuscript was inadvertently retained in the Supplementary Information, although it was not included in the final published article. As a result, the scenario numbering in the Supplementary Information did not correspond to the scenarios discussed in the main text, leading to apparent inconsistencies for Climate change and Marine ecotoxicity results for Scenario 3.

The Supplementary Information has now been corrected by removing the tables related to the excluded scenario and aligning the remaining scenario numbering with the final version of the article. The results presented in the main article remain unchanged.

The authors would like to apologise for any inconvenience caused.
