

**"Eroding on the edges"**

Integration Strategy for West Fringe of Xi'an City as a  
supportive urban tissue in  
Mega City Plan 2020+

## KEY WORDS

Public space network, Fragmentation, Local value, Multi-layering strategy, Flows, Landscape

## RESEARCH QUESTION

How to combine the current corridor development and the cultural & historic assets by means of the **public space network**, in order to counteract the fragmentation at the local level and meanwhile benefit the local inhabitants of western fringe of Xi'an City, supplementing the governmental city model.

**CONTEXT  
INTRODUCTION**

**READING THE  
CITY&VISION**

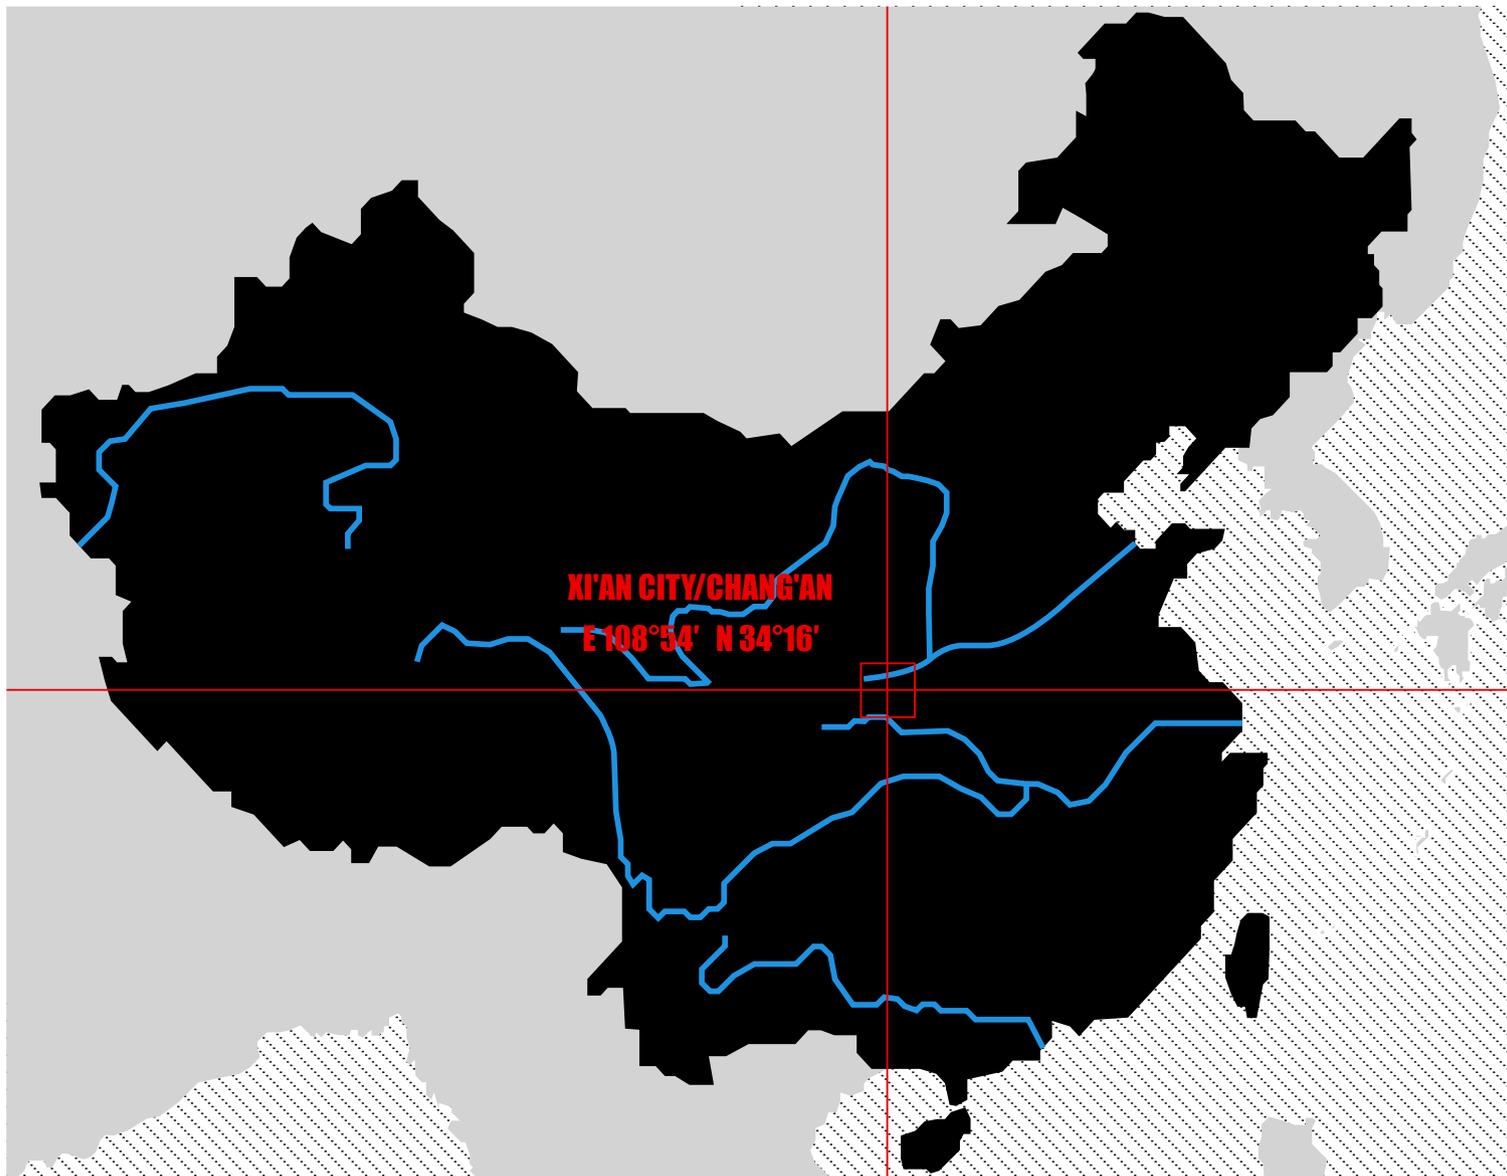

**URBAN DESIGN**

**EDGE STRATEGY**

# XI'AN CITY : Complex city

# XI'AN CITY Introduction

## Population

Xi'an	7,547,600
Rome	2,726,927
Amsterdam	762,317
Shenzhen	12,693,000

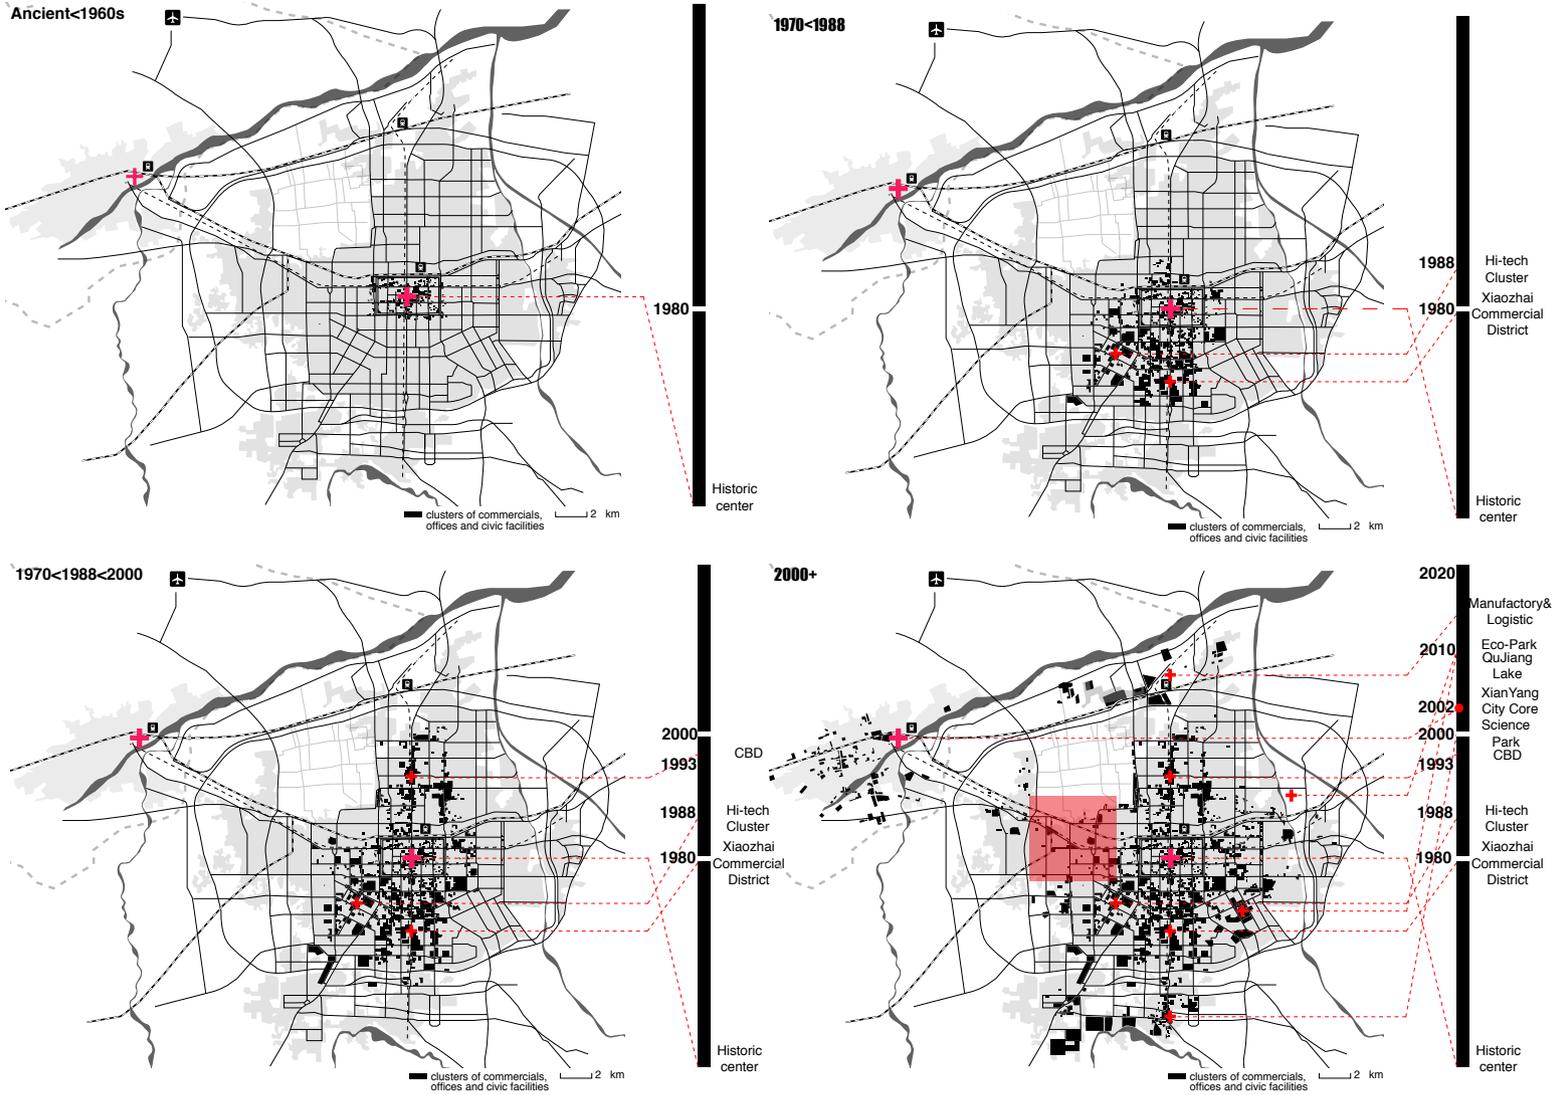

## Land Area (sq km)

Xi'an	3,547
Rome	1,285
Amsterdam	166
Shenzhen	2,050

## History (yr)

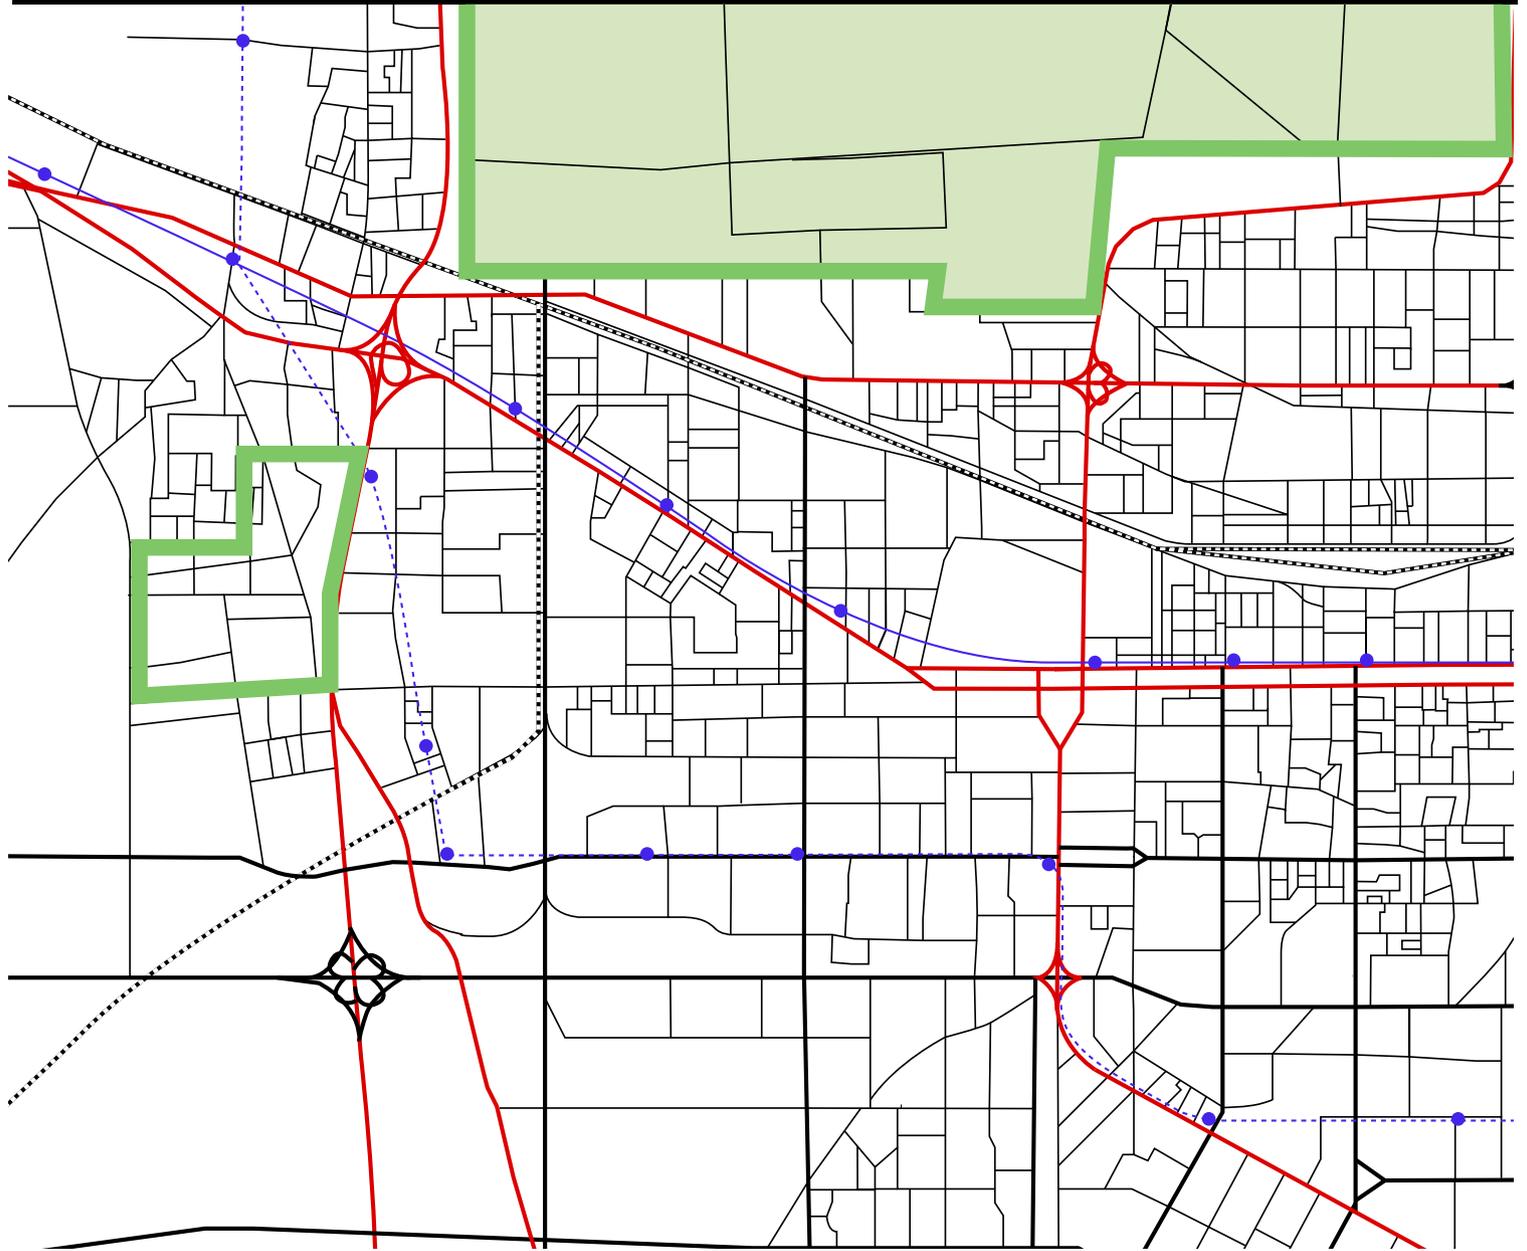

Xi'an	3,200 since 1100BC
Rome	2,760 since 763BC
Amsterdam	735 since 1257
Shenzhen	132 since 1978

# Context: Mega Xi'an City 2020+

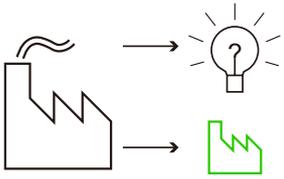

**Monocentric city > Polycentric city > Proximal cities' collaboration > Twin city model > Mega Xi'an city plan 2020+**

# Condition of local scale

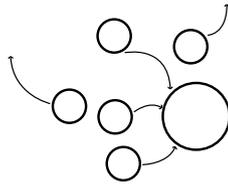

- Metro
- - - Railway
- Corridors
- Streets
- Local streets
- Preserved heritage park

# Problem Definition

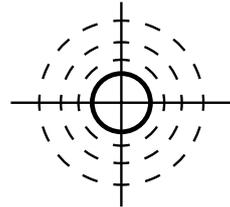

transforming industry

+

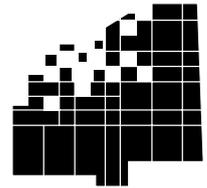

floating groups

+

rapid urban growth

+

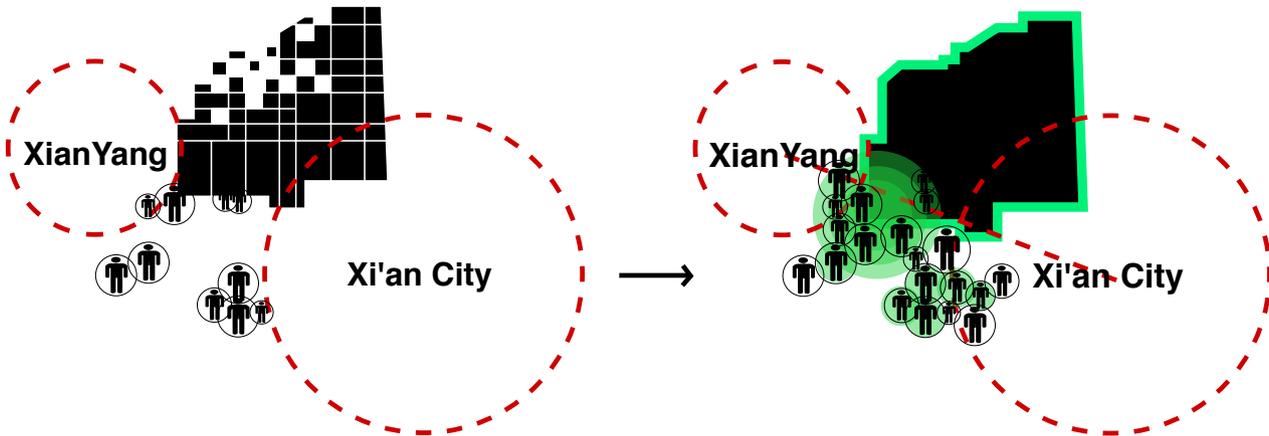

neglecting cultural assets

**Spatial fragmentation and deprived urban quality at the local level because of neglecting the existing conditions and local values.**

# Ultimate Aim

The availability of the **cultural & historic asset area**, and the importance of **new development** area in between two main centrality cores, can be combined as the activator in order **to integrate** the whole in between area become the **supportive tissue** of the Xi'an Mega City model, meanwhile **benefit the localities**.

**Networked Cities**

Source: photo by author

Rethink and redesign the "edges" to absorb flows and developing strength to establish the integrated urban tissue.

The "edges" become the interactive spatial element.

# Isolated mono-functional islands

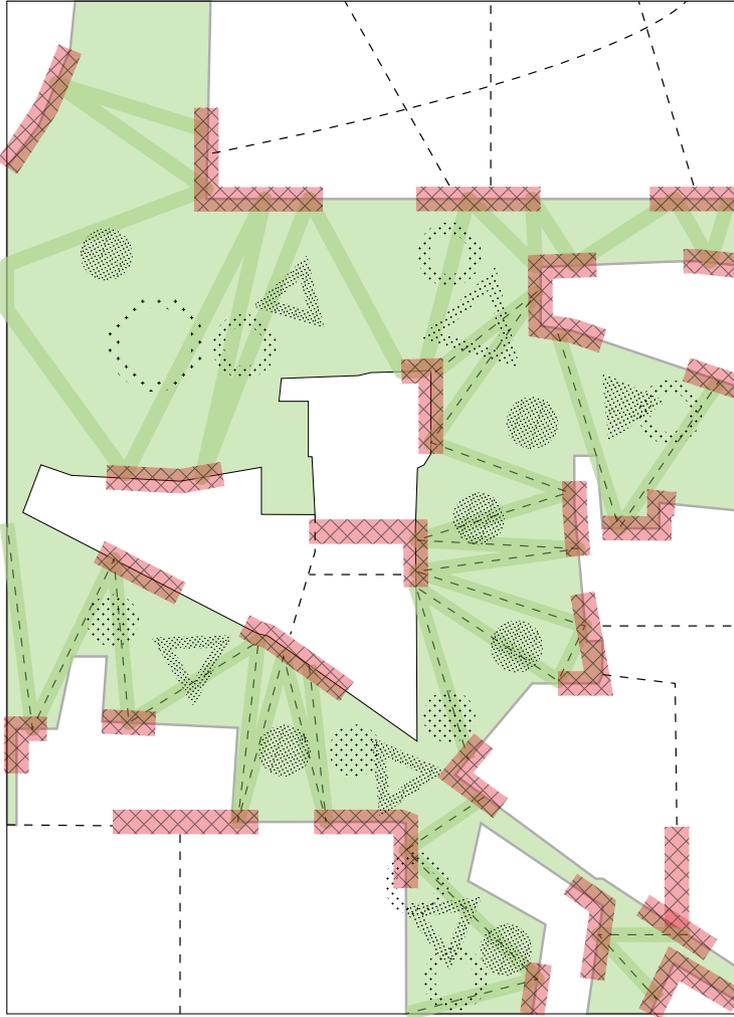

# Concept: Design on the edges

200m

# Strategy: Activation of edges

Activate the edge by means of

## ***Landscaping***

Providing diverse landscape quality on the edges by capturing the green flow from natural heritage park to the locality.

## ***Densifying***

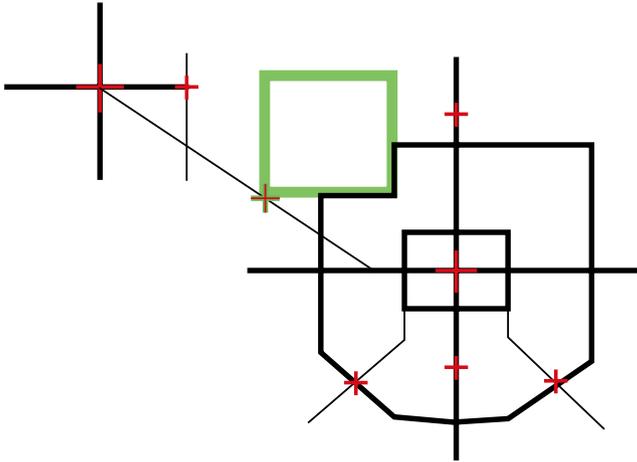

Building densification on the edges in different functions which enable new typologies of public spaces and more capacity for urban diversity.

## ***Programming***

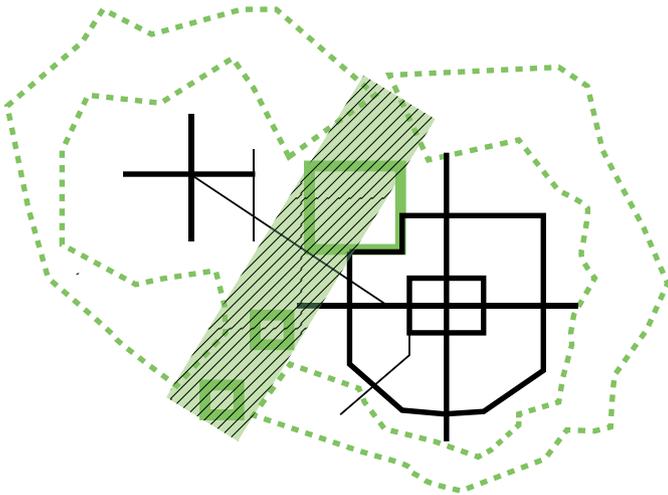

Proposals of diverse and consistent public activities in order to vitalize the public space network on the edges.

# Expected Spatial Relational Effect

City Scale Effect

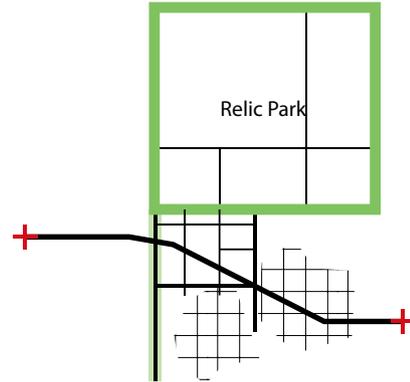

Form new identical sub-centrality to reinforce the twin city model.

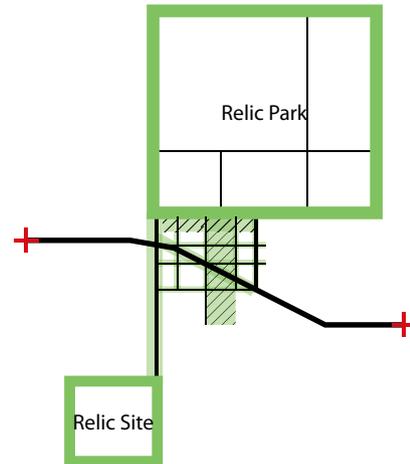

Keep the green structure coherent and create opportunity to interface the city with green and cultural related space.

Local Scale Effect

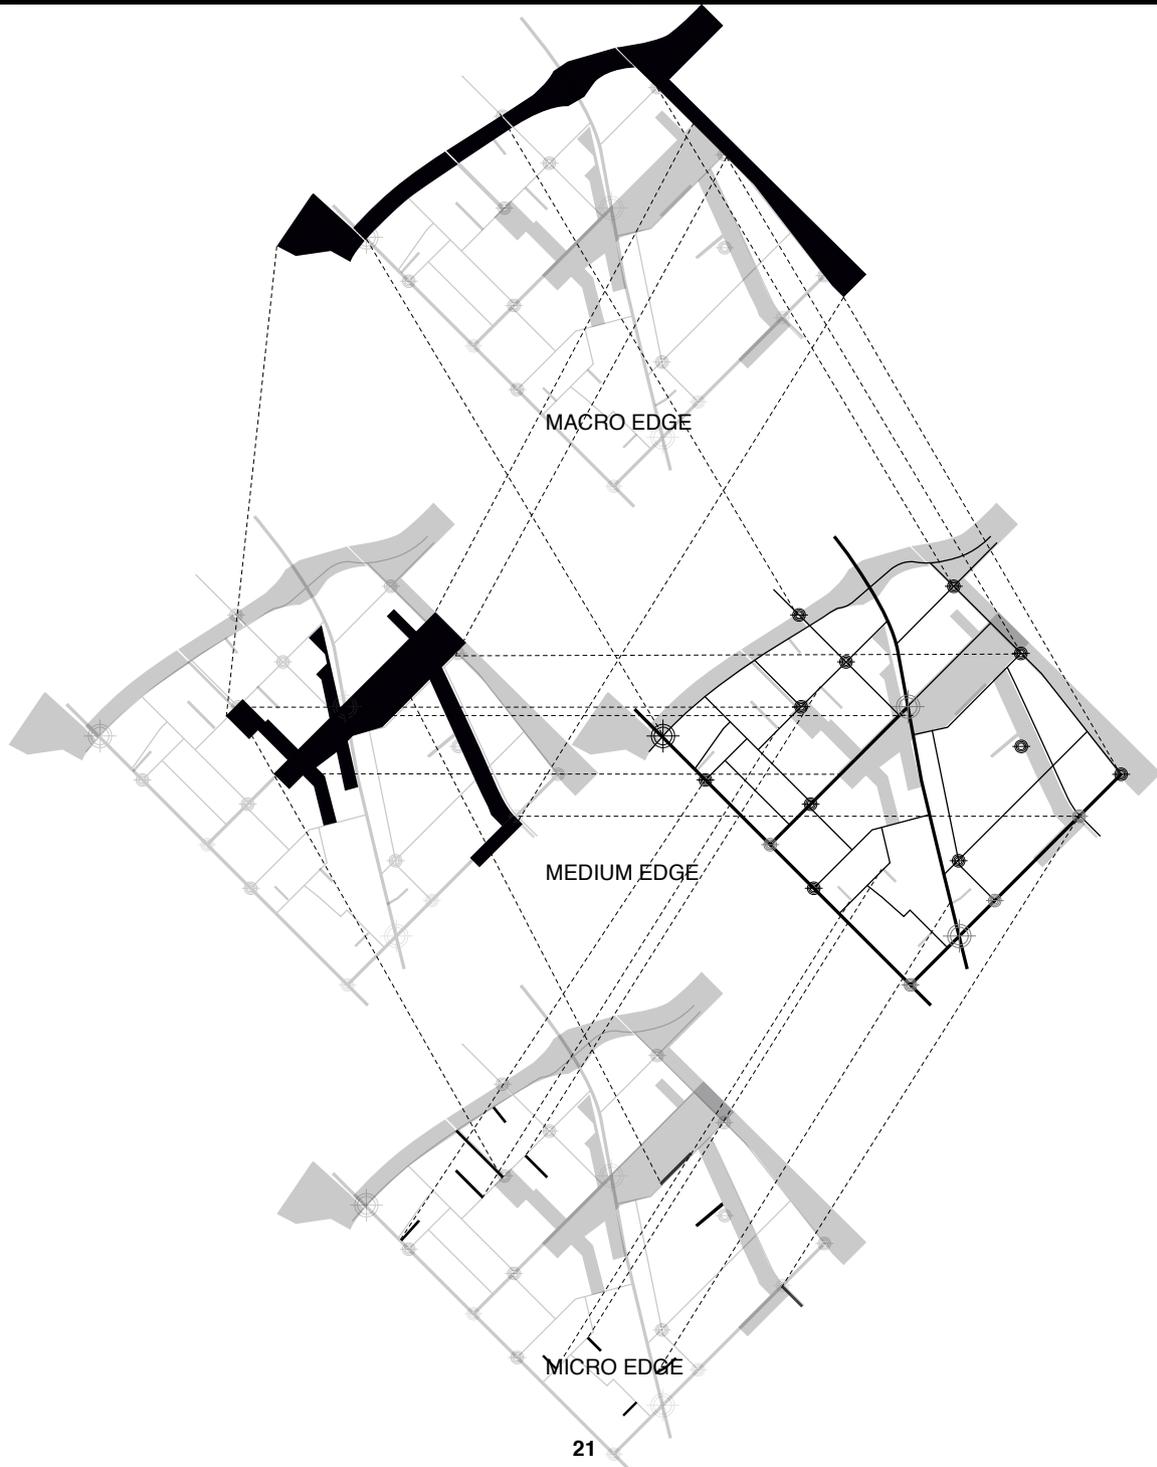

Restructured urban network in the future integrates the local area as the urban tissue with the city structure as a whole.

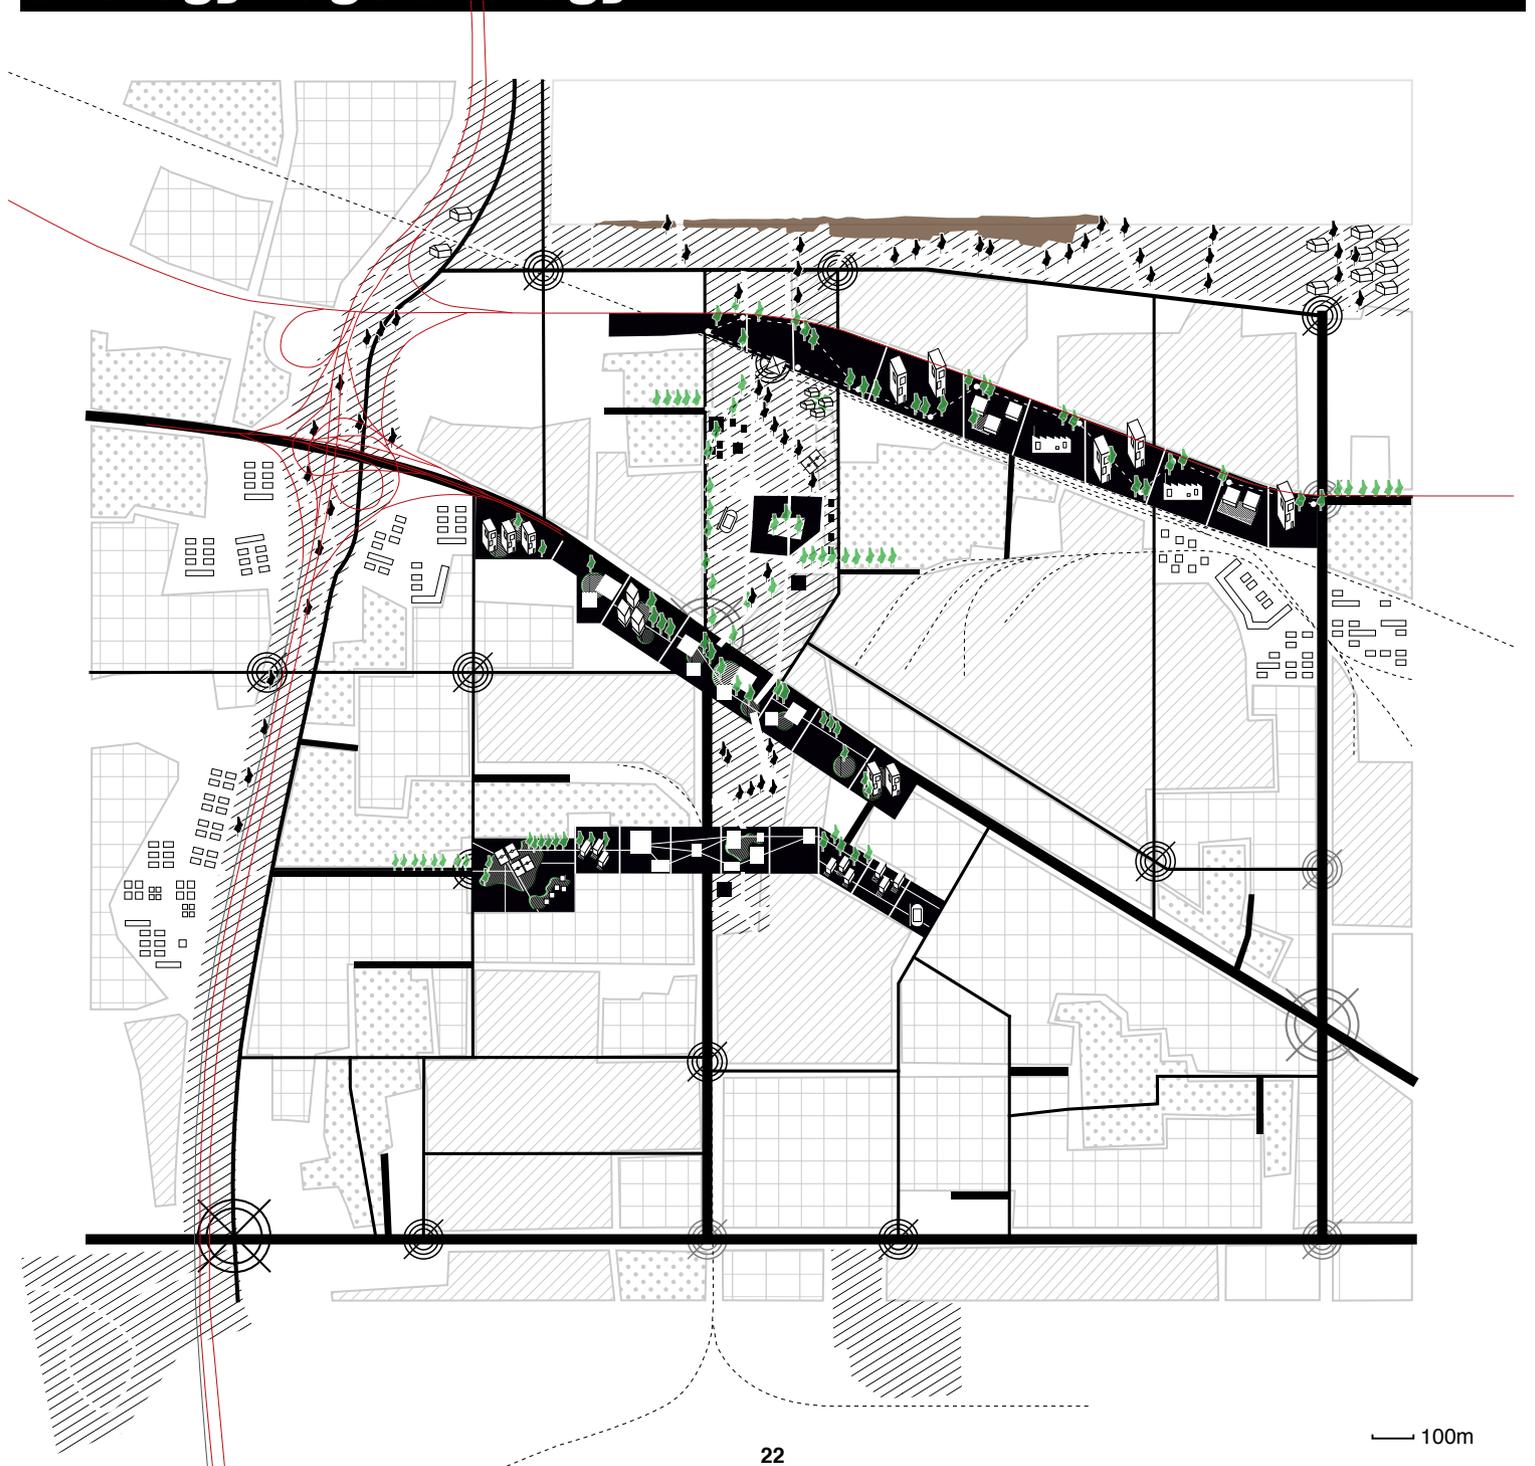

Provoke the value of the regional heritage park to the public meanwhile permeate the green quality via the proposed network.

# Strategy: Multi-layered working system

# Strategy: Edge Strategy

# Existing green space

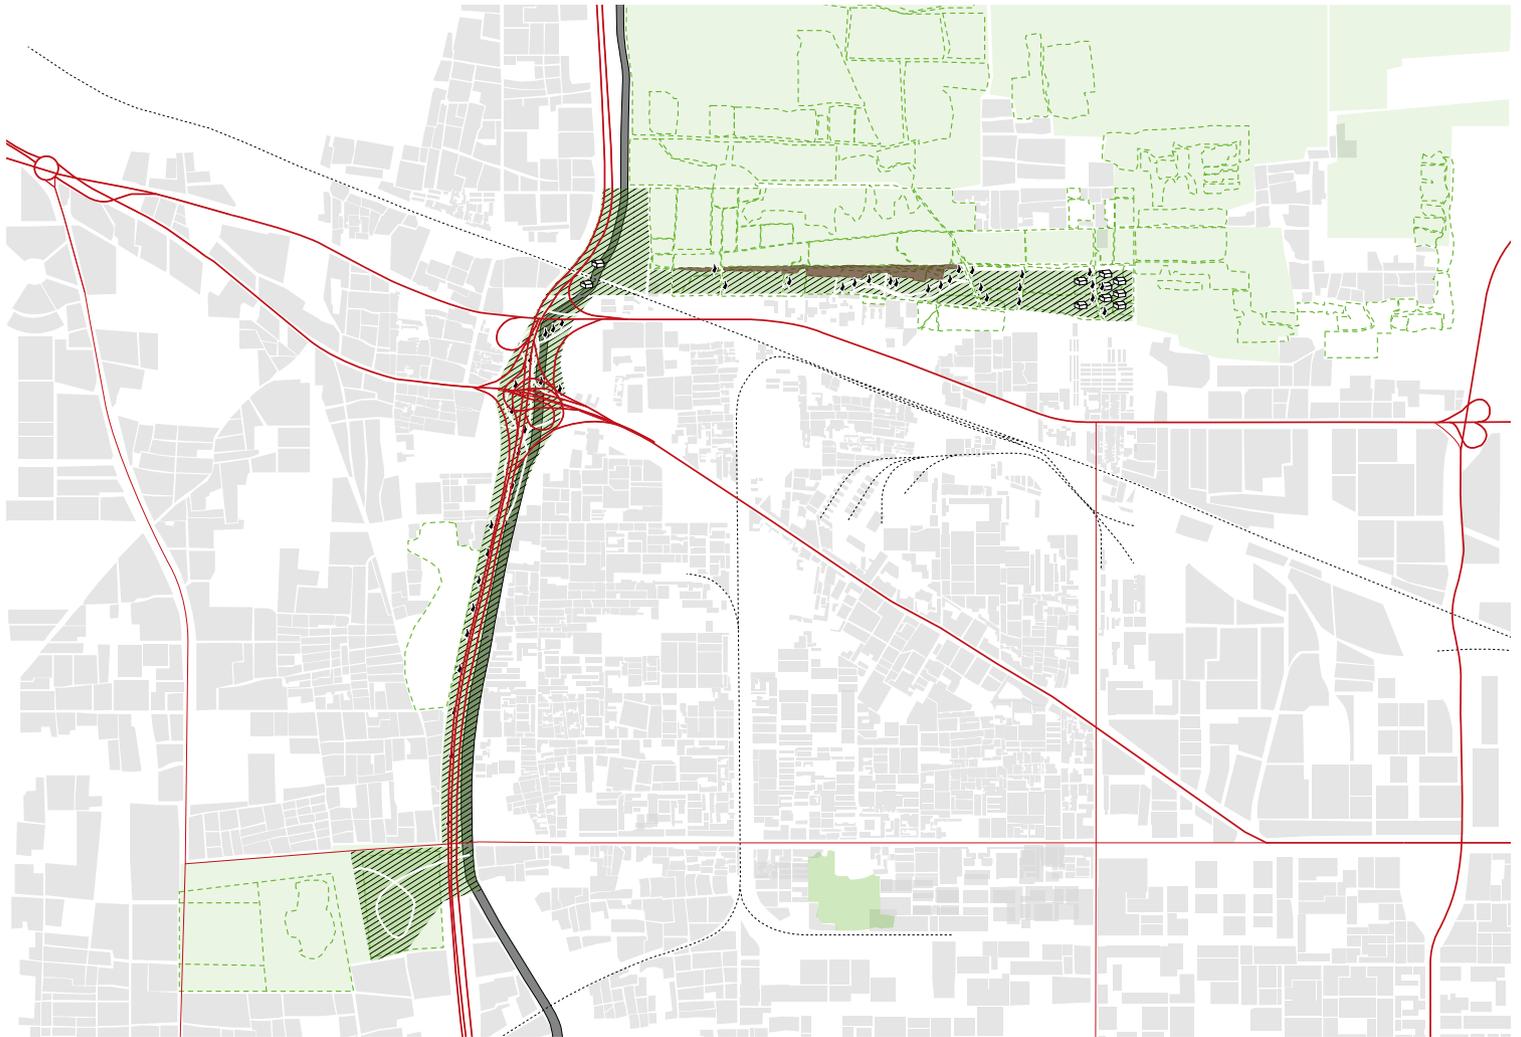

- Existing urban green
- Undefined green open space
- Riverbank green space

# Micro edge: Design tools providing permeability

Criteria are dependings of what is surrounded.

+ Large infrastrucutre

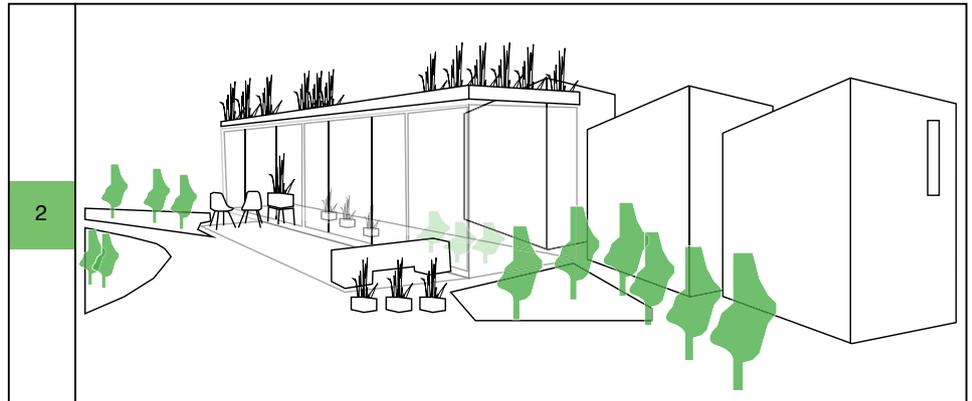

+New housing development projects

Densification on the micro edges(public space, shops at the bottom floor, parking)

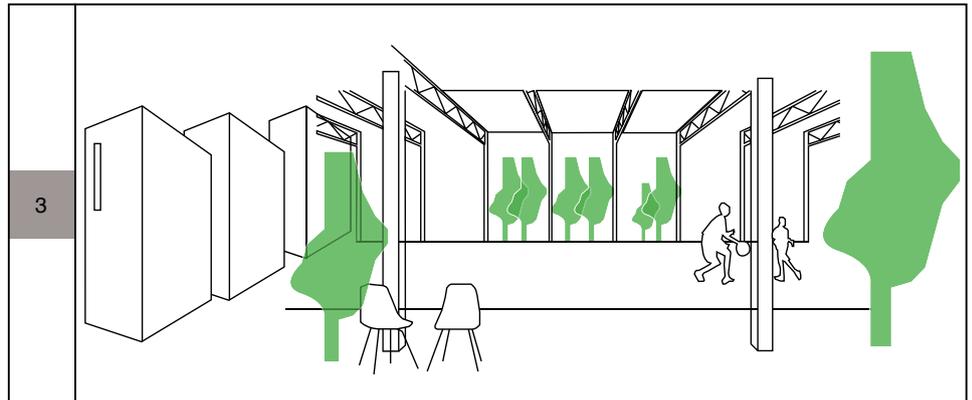

+ Green and original agricultural land

+ Local neighbourhood

Urban agriculture(glass houses, community room)

+ Industrial area

Conversion of industrial buildings into service functions(sports,education,resturants,bicycle parking,etc.)

Providing visual accessibility

Place of gethering

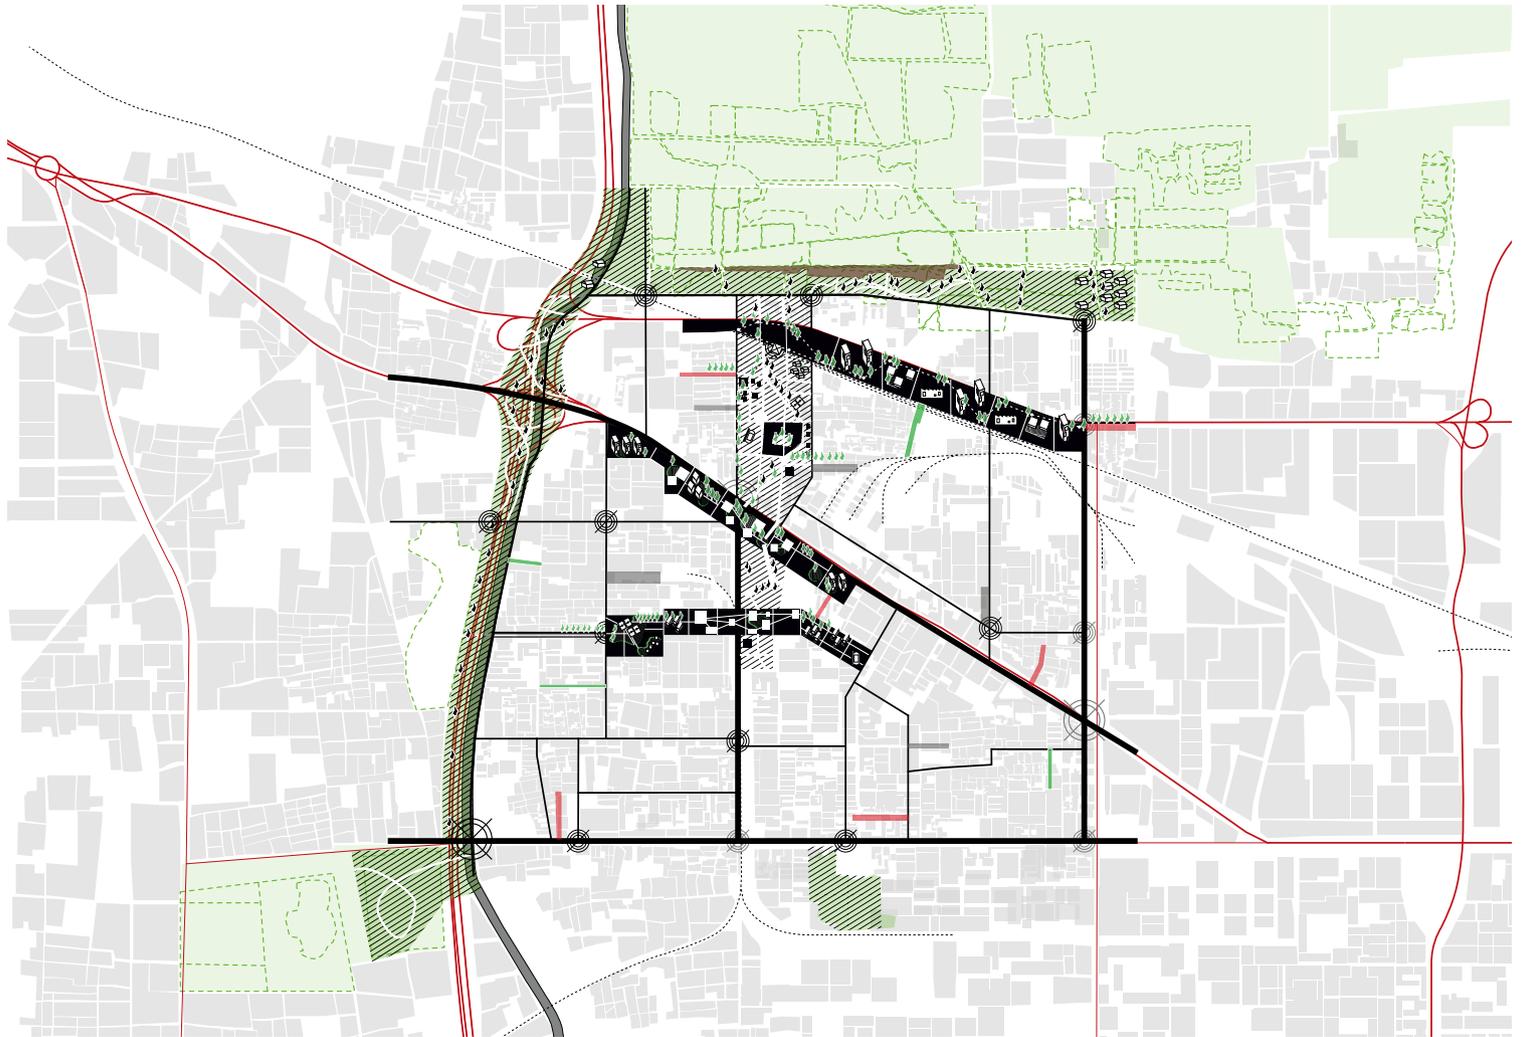

Diversity and vitality

Qualified edges

Permeable public spaces

Sense of belonging

Conclusion ●

# Design: Starting Point

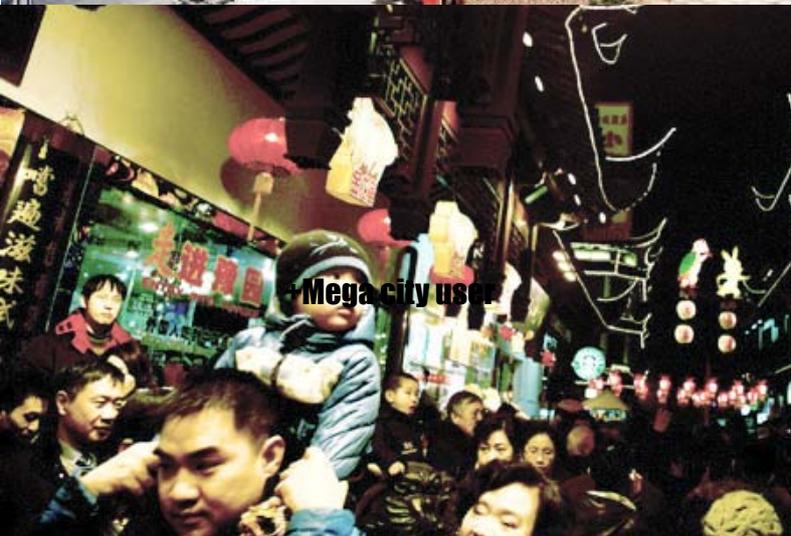

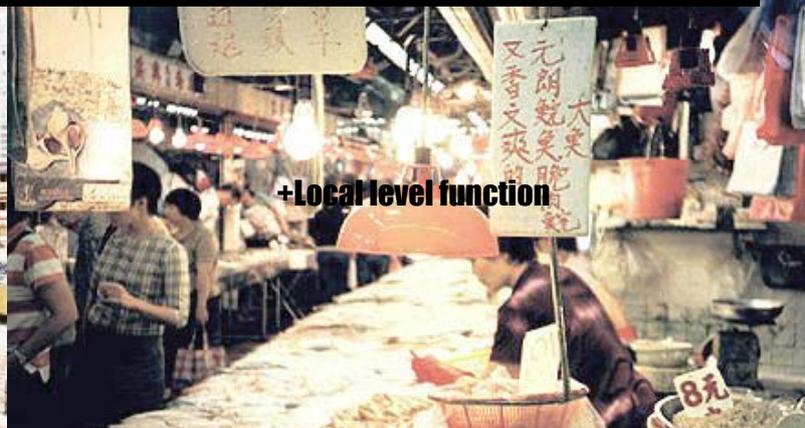

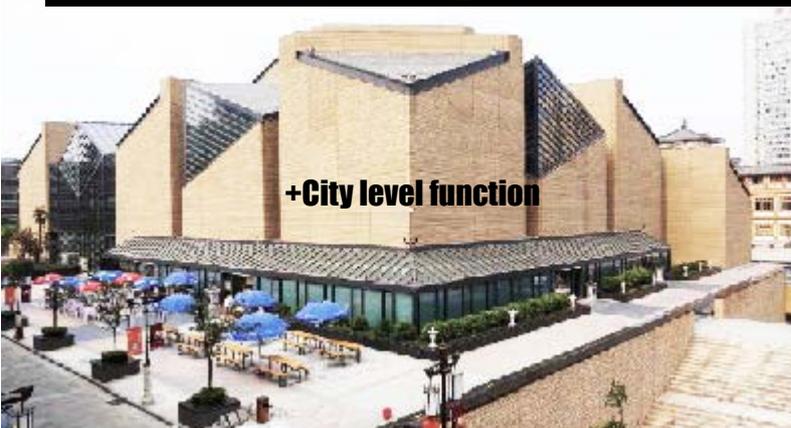

Central Yard Area  
size: app.247,500 sqm

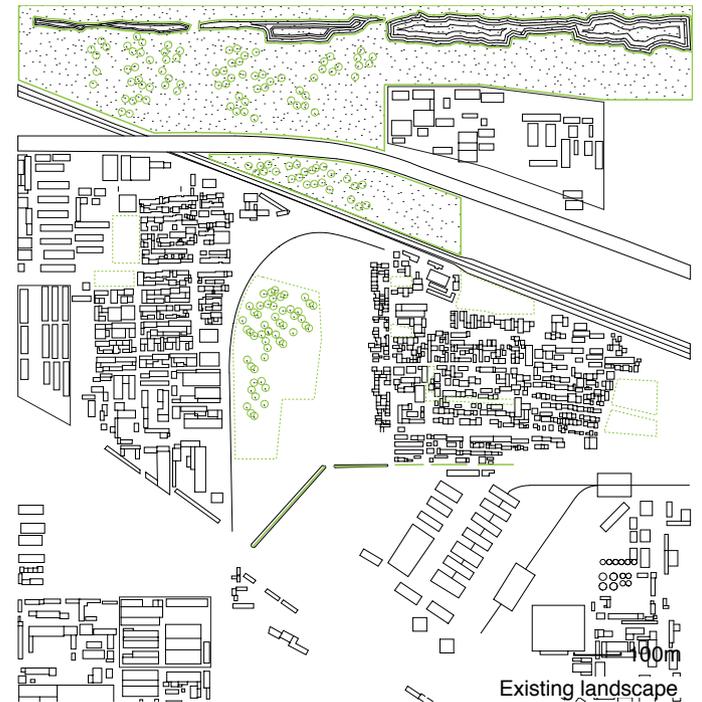

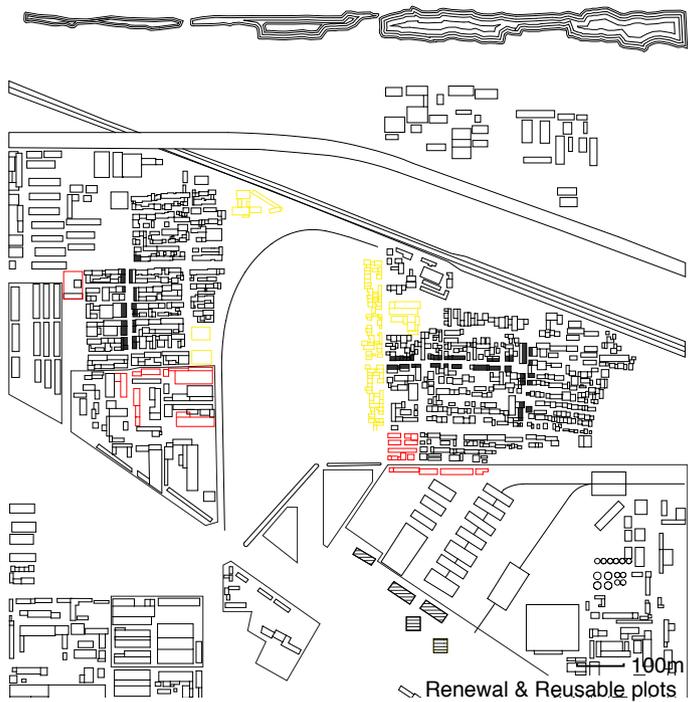

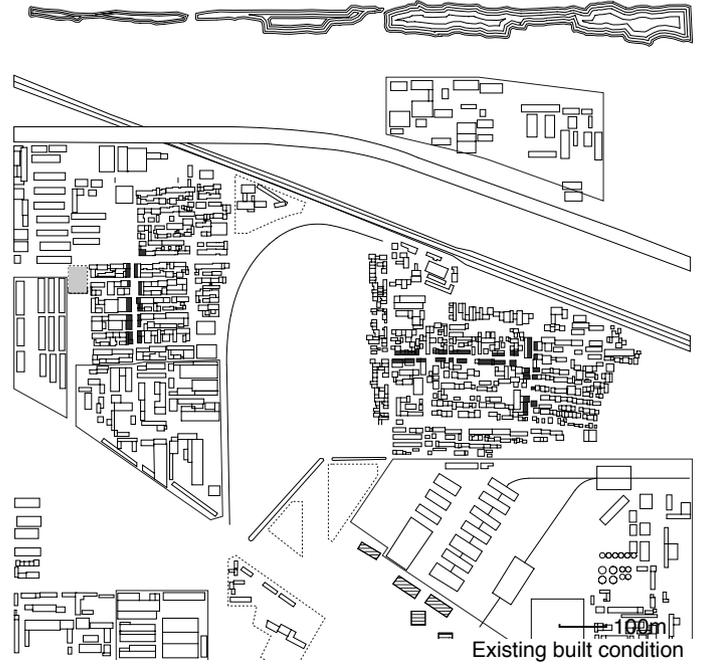

Spatial design challenge

How to organize the different level of public space as a network, by means of shaping landscape, meanwhile permeate the qualities to surrounding neighbourhood, in order to integrate the local structure in the new city structure?

# Transtional Strip

# Site: The existing & potential

# Site: The existing & potential

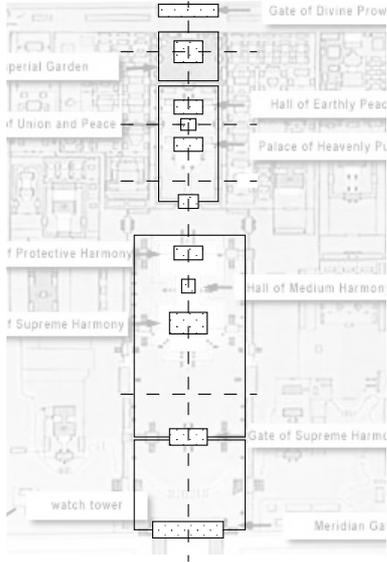

— 100m  
Potential flows

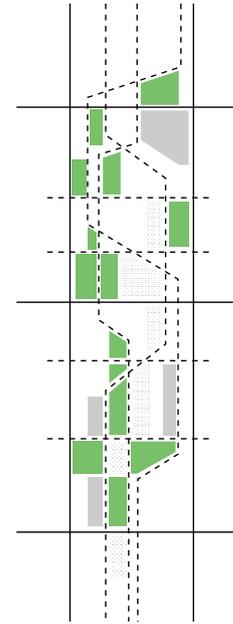

— 100m  
Proposed central green flow

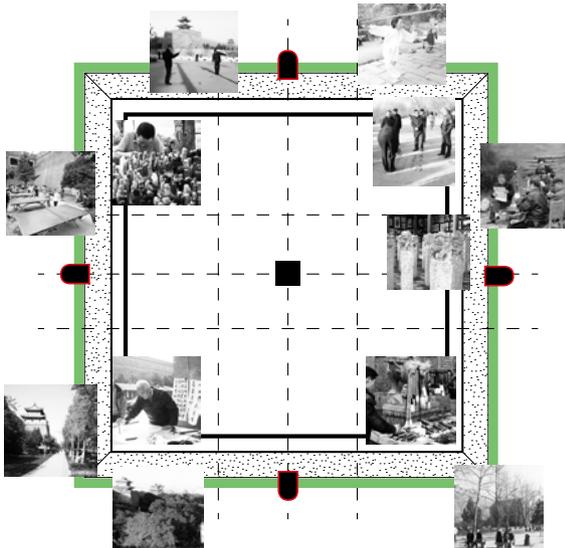

# Reshape the traditional pattern

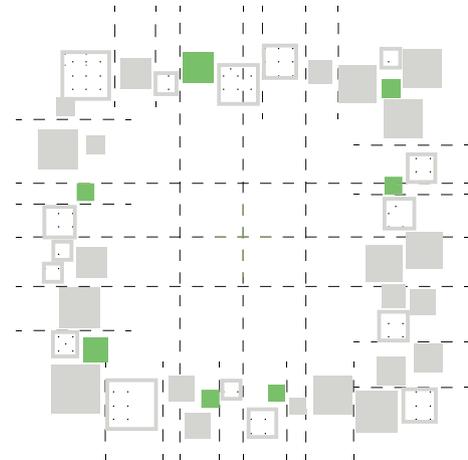

Iconic axial regularity of the Chinese traditional architecture

Enrich the spatial condition of the axes for dynamic demands and program, meanwhile improve the permeability.

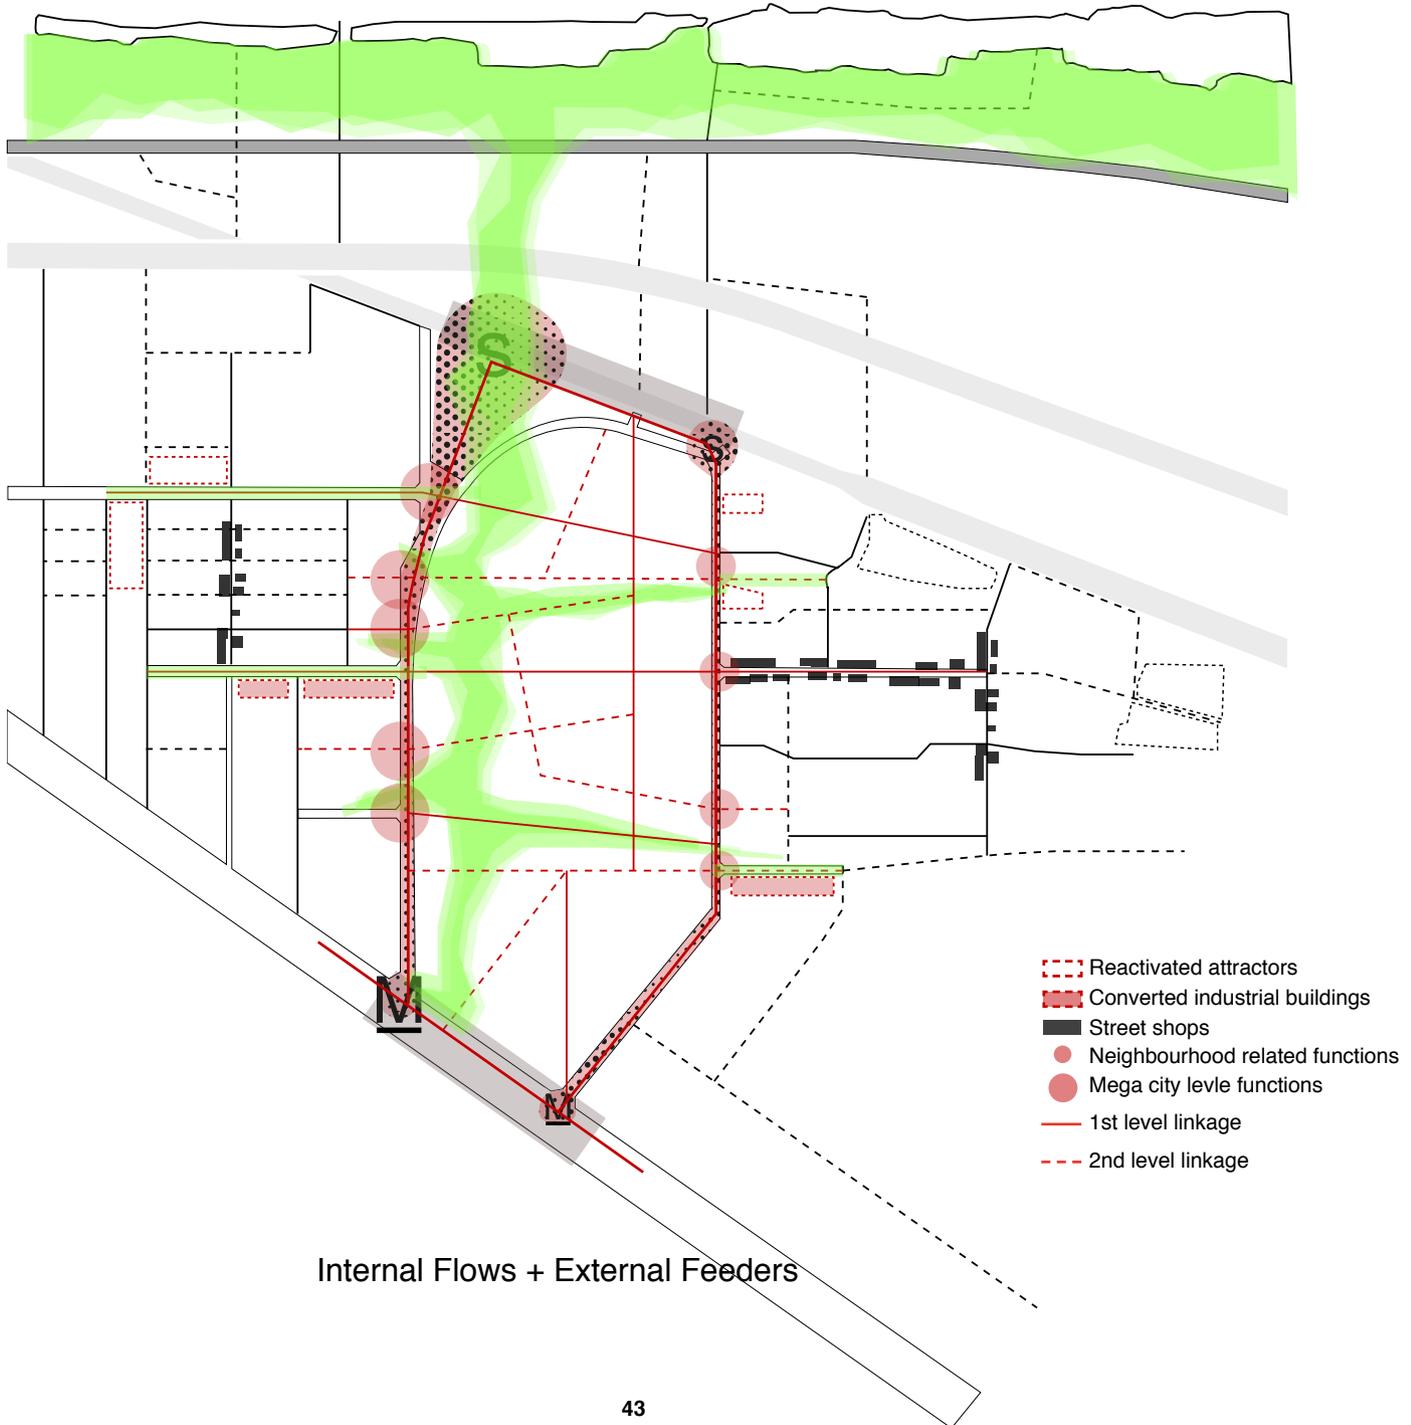

Iconic public space system of Xi'an city

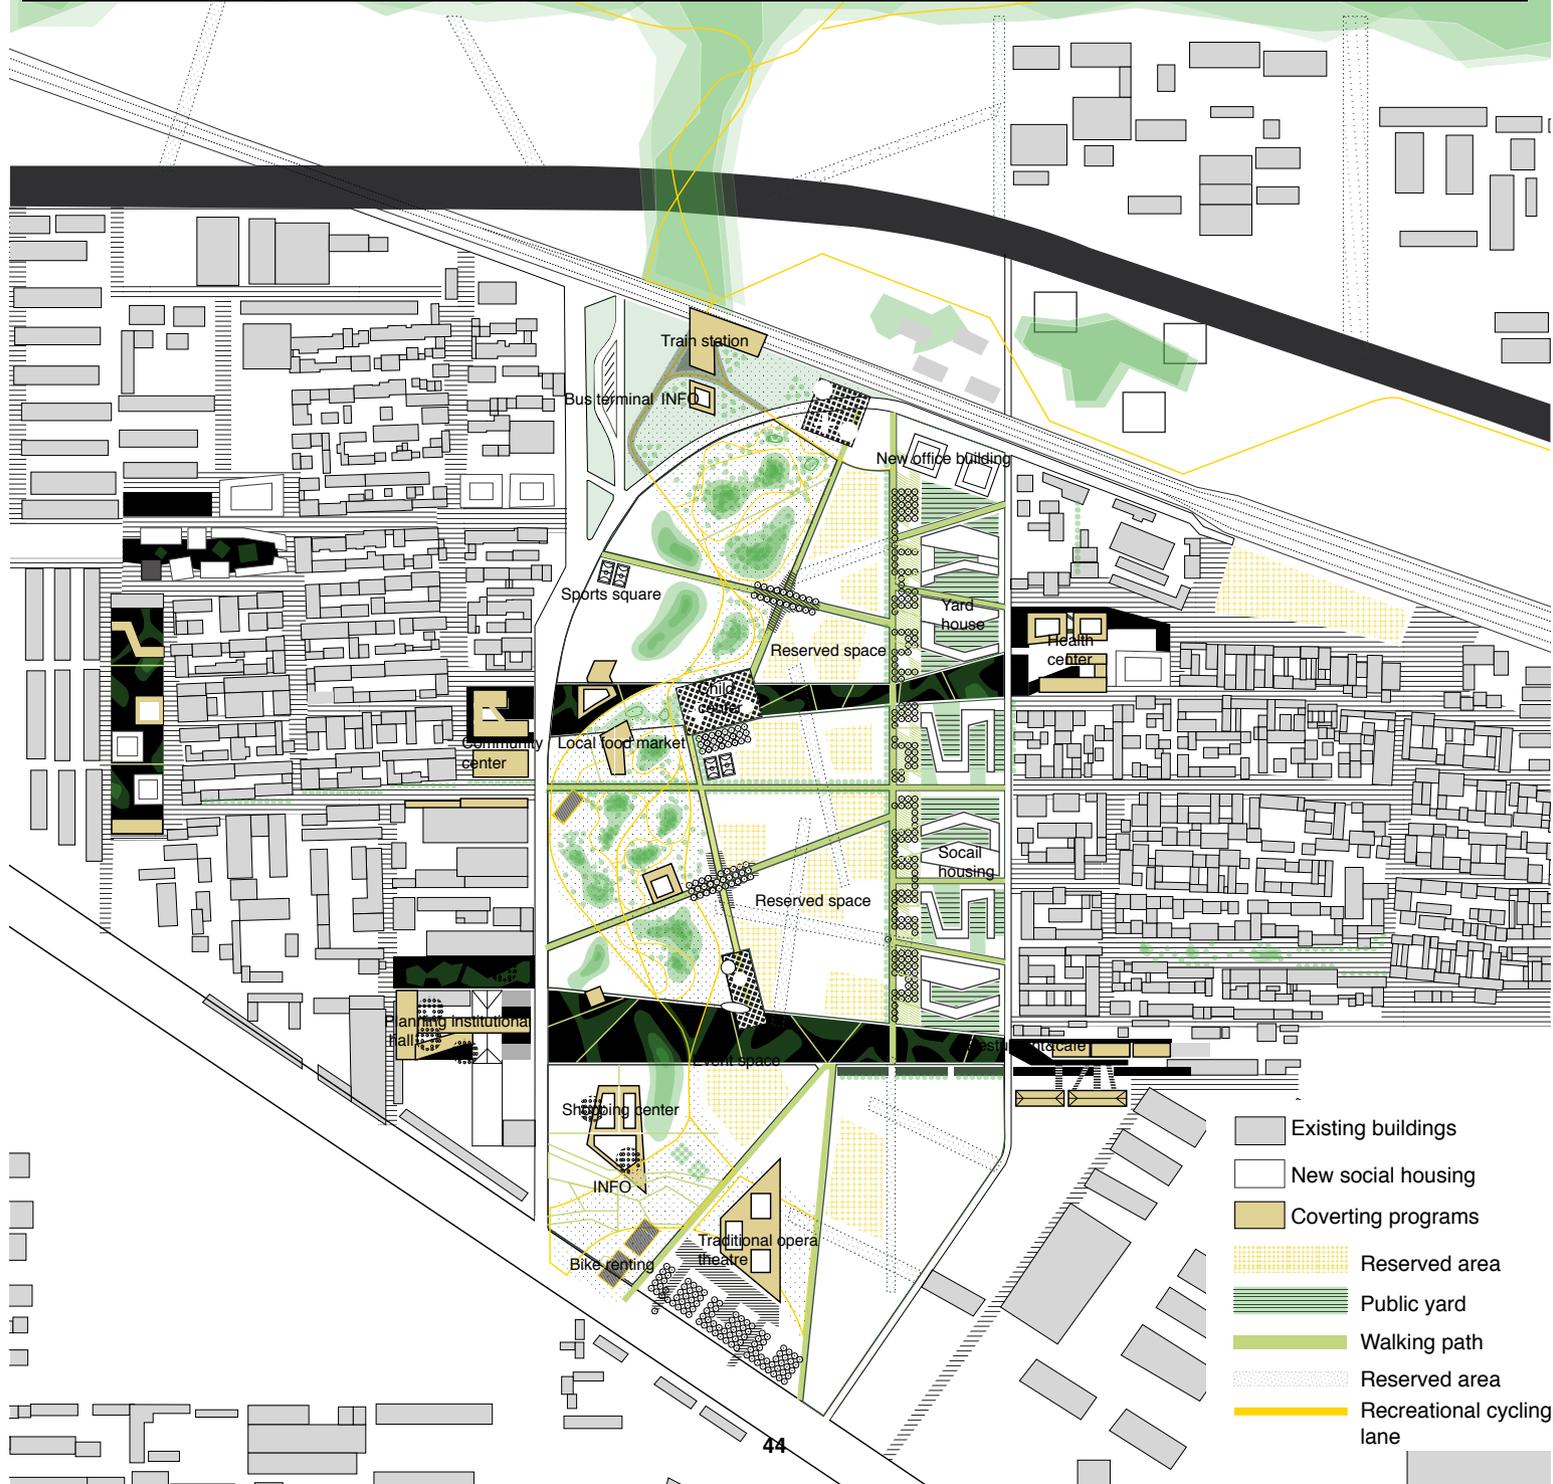

Propose different transparency of the public space by programming and site structure in order to create dialogue between in and out on the permeable edges.

# Proposed spatial structure

# Design Masterplan

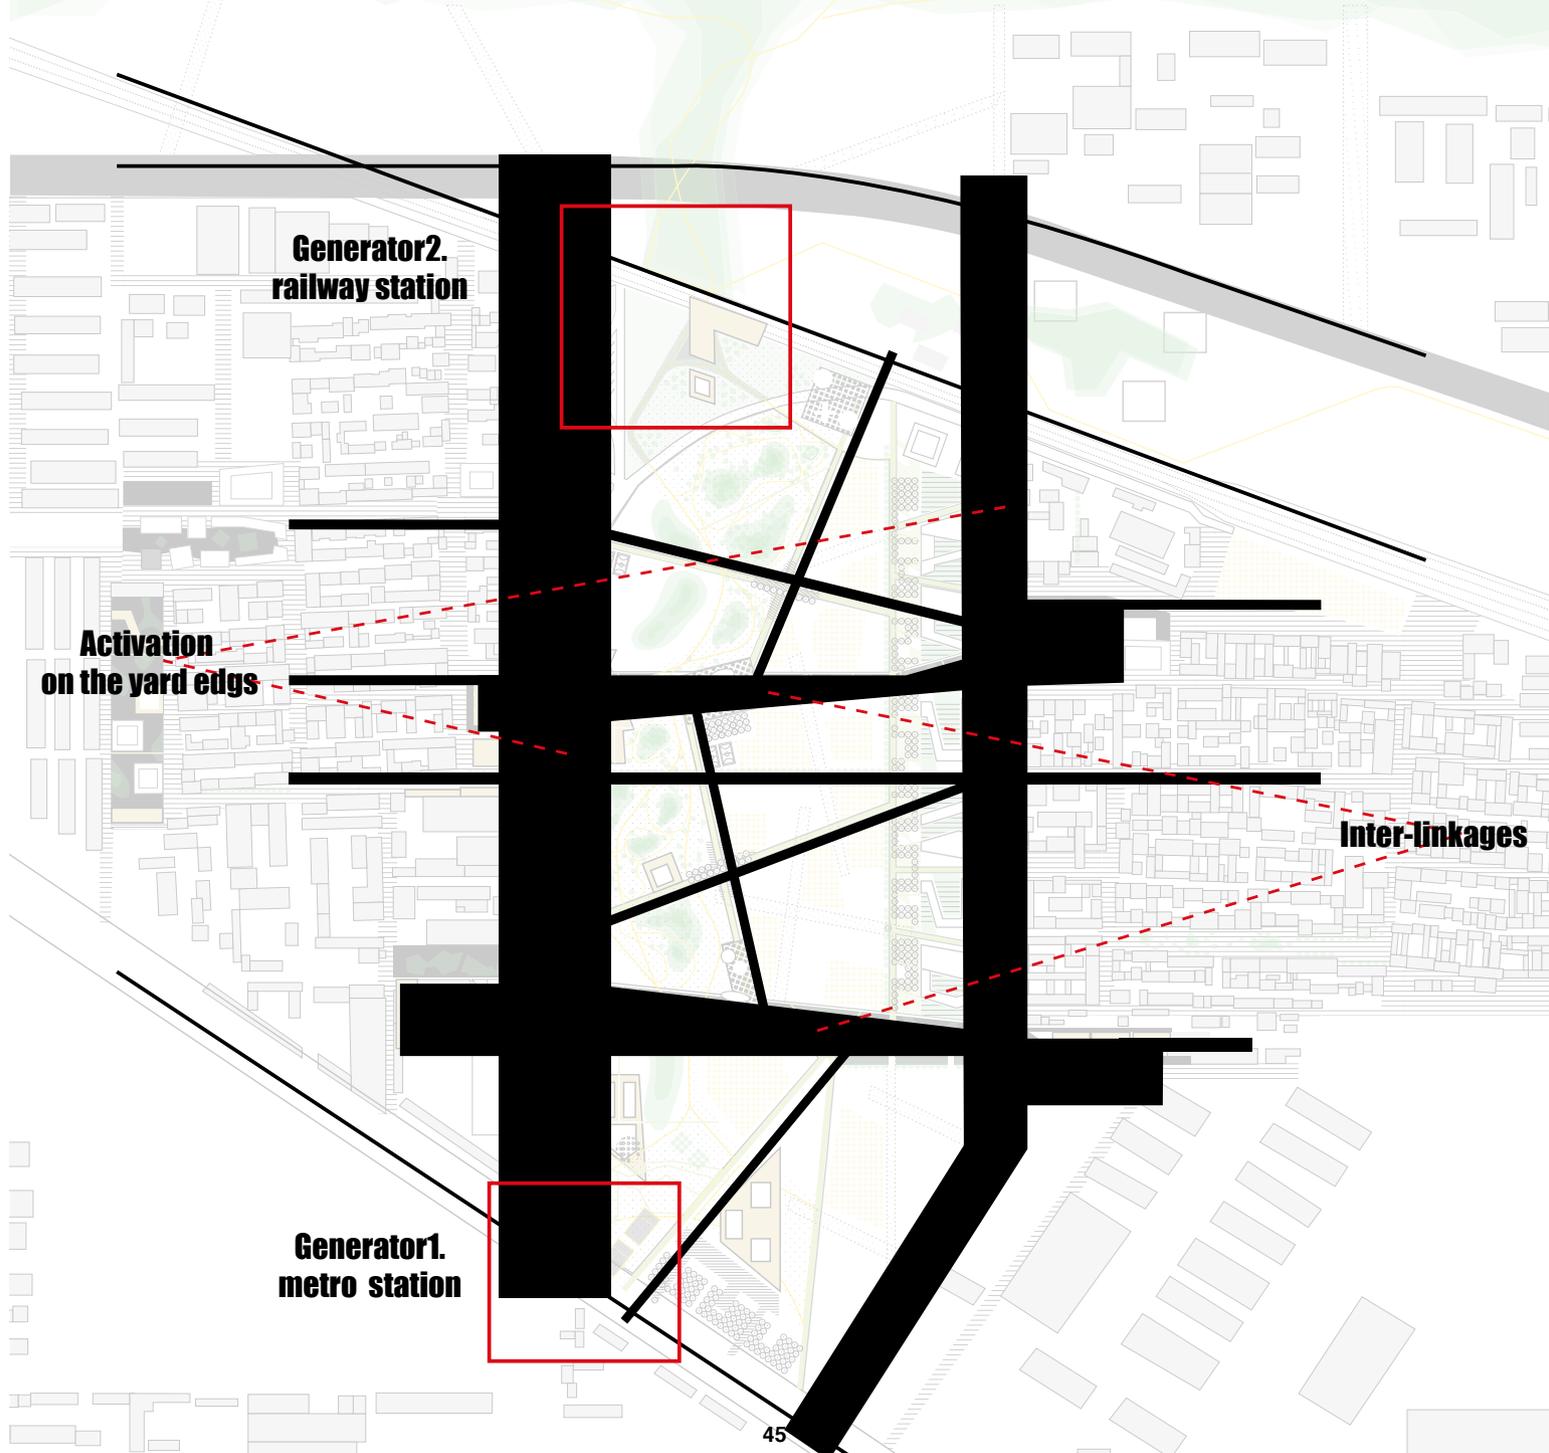

# Strategic elements

**Generator2.  
railway station**

**Activation  
on the yard edges**

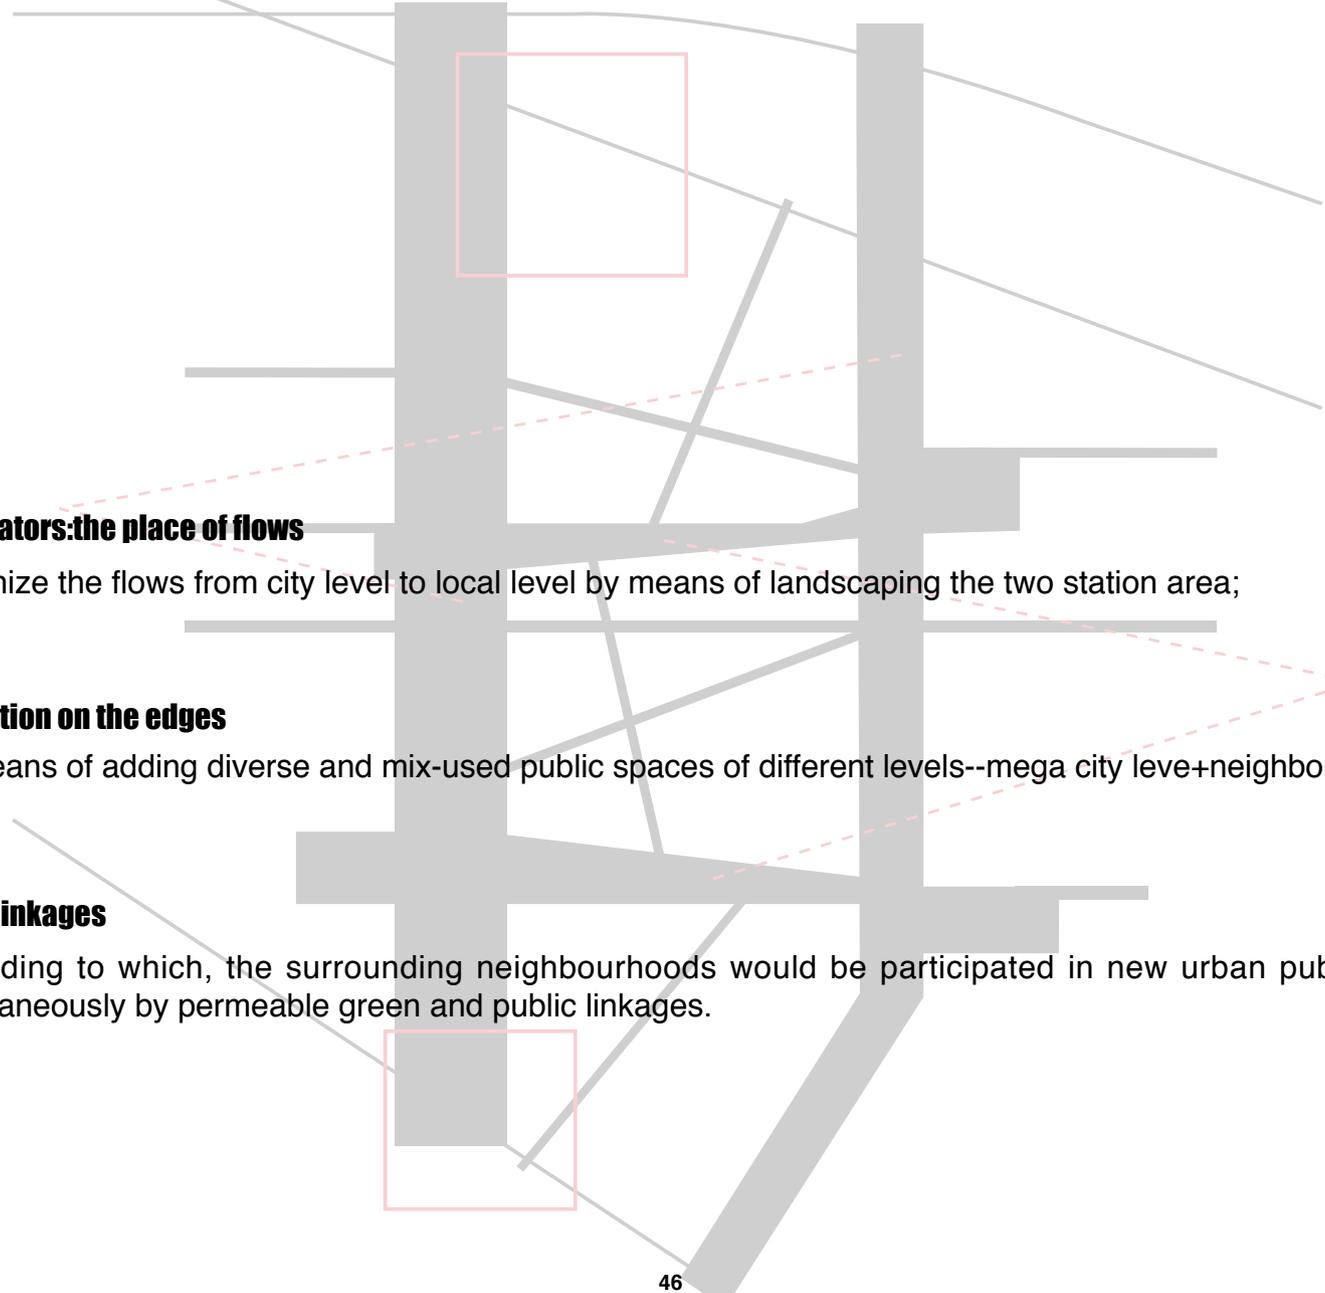

**Generator1.  
metro station**

**Inter-linkages**

# Design Strategy

## Strategy

## Generators: the place of flows

Organize the flows from city level to local level by means of landscaping the two station area;

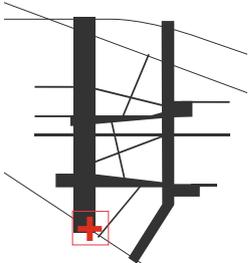

## Activation on the edges

by means of adding diverse and mix-used public spaces of different levels--mega city level+neighbourhood level;

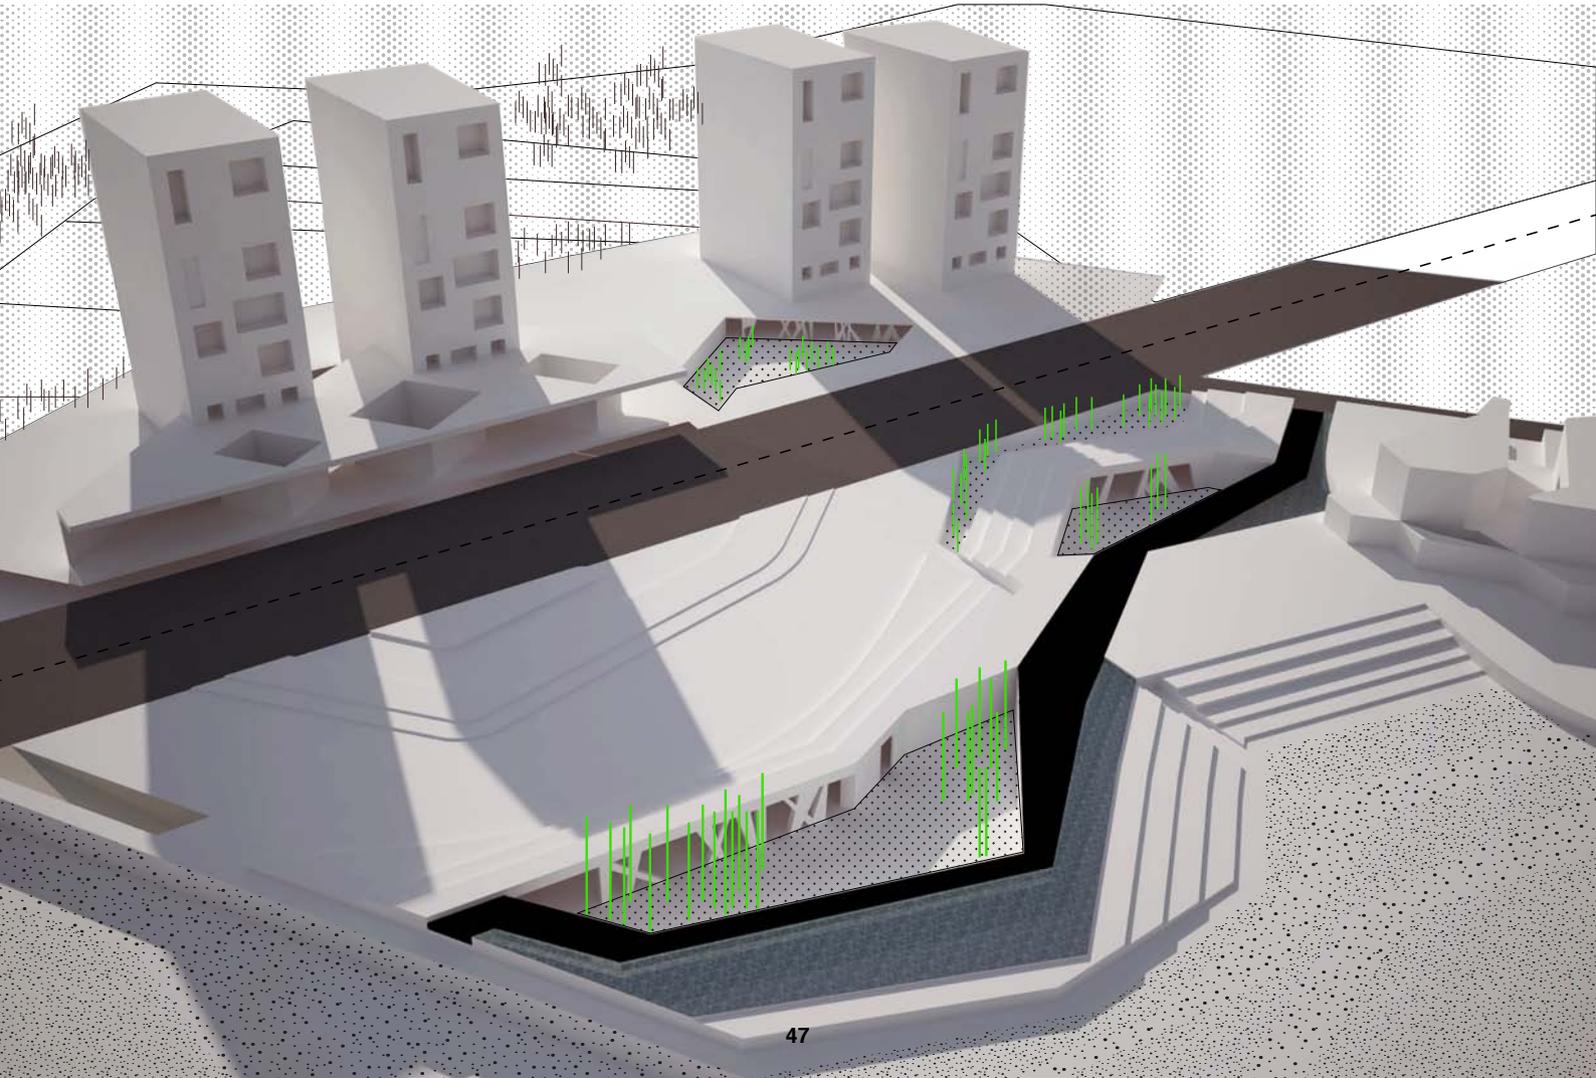

## Inter-linkages

according to which, the surrounding neighbourhoods would be participated in new urban public life spontaneously by permeable green and public linkages.

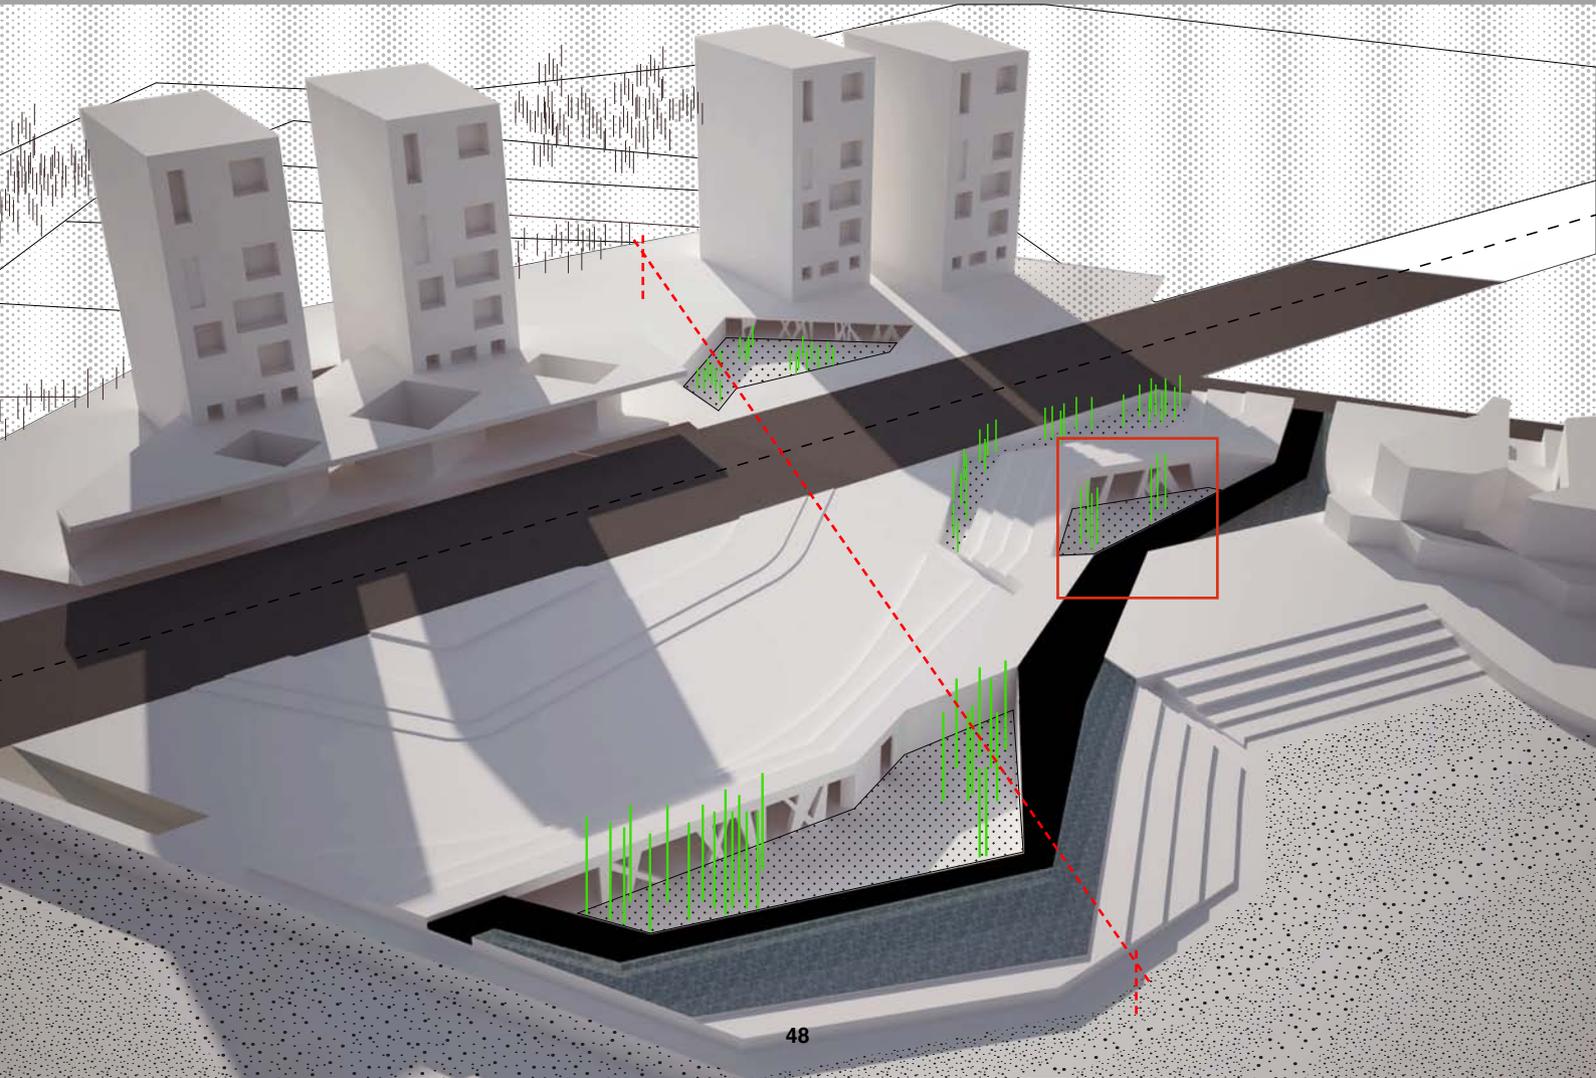

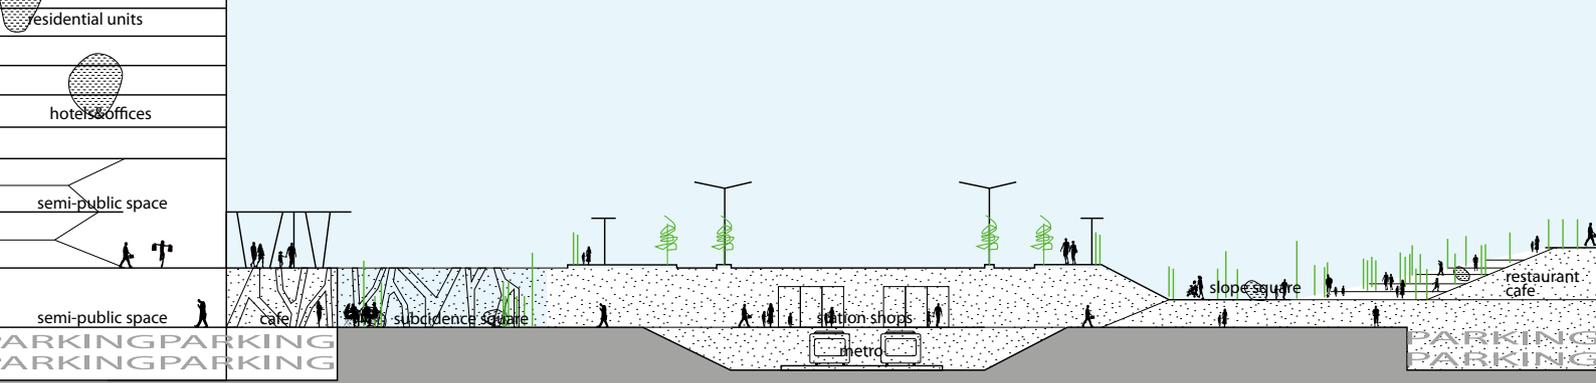

# Generator 1 : metro station area

Landscaping the territory

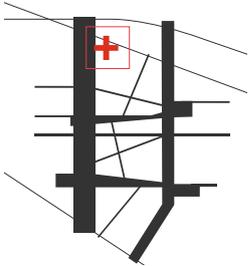

# Generator 1: metro station area

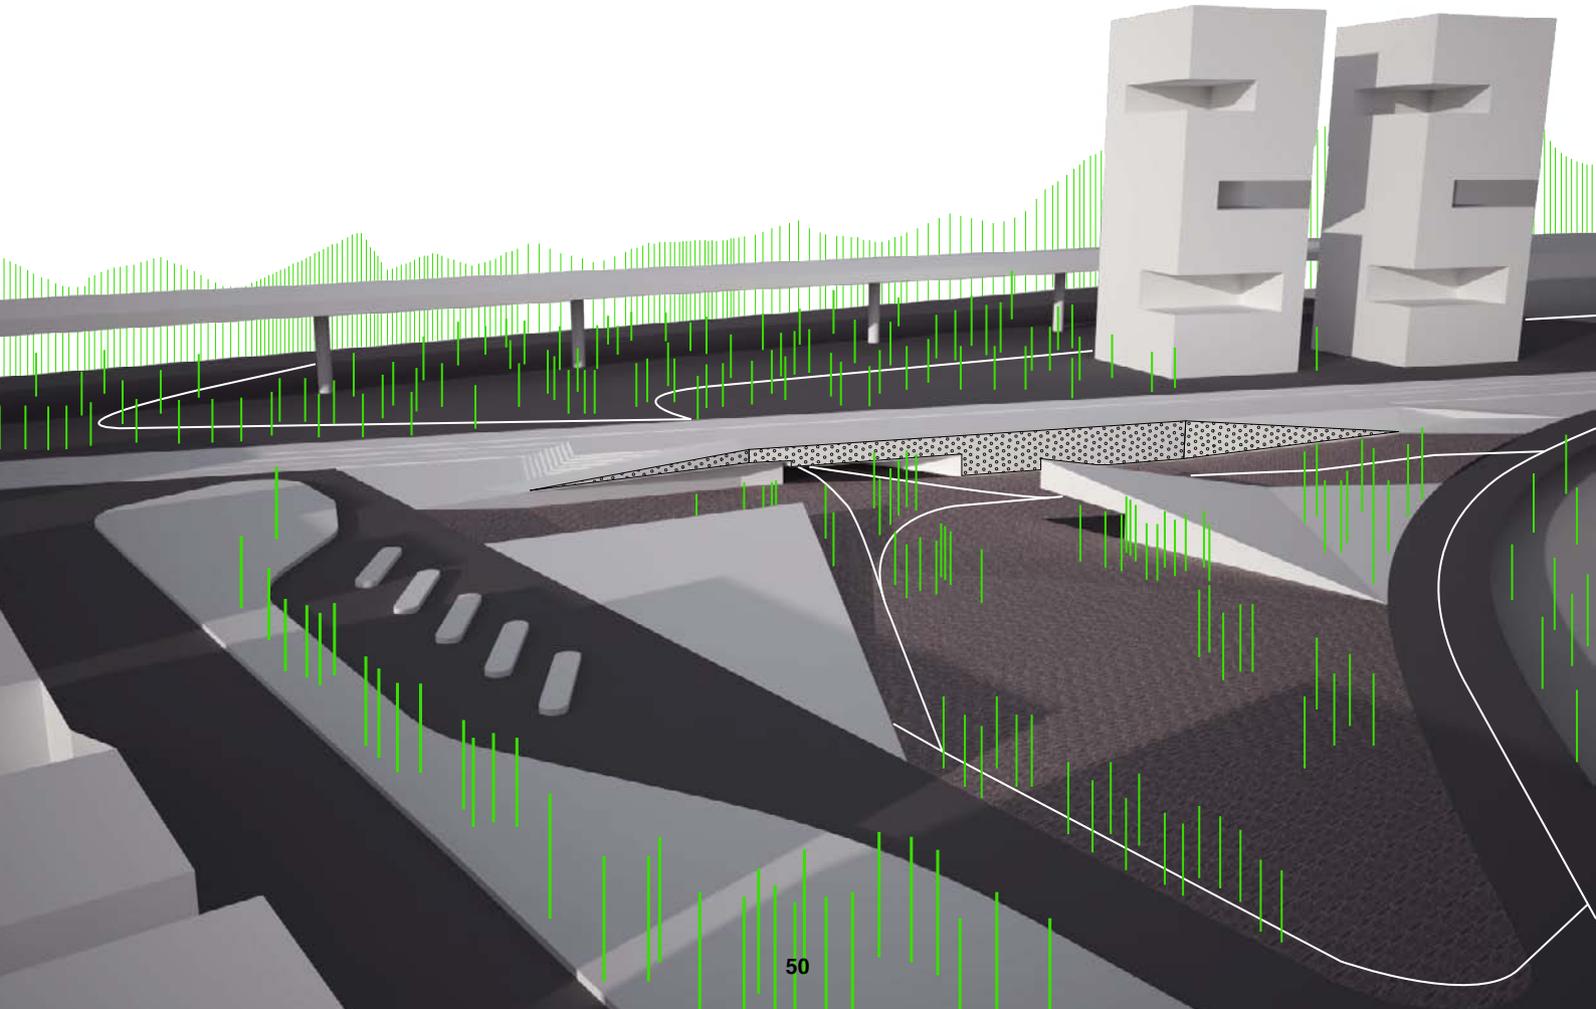

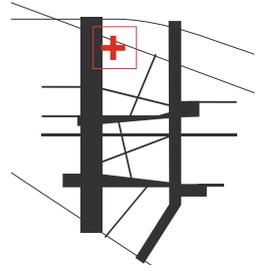

# Generator 2: railway station area

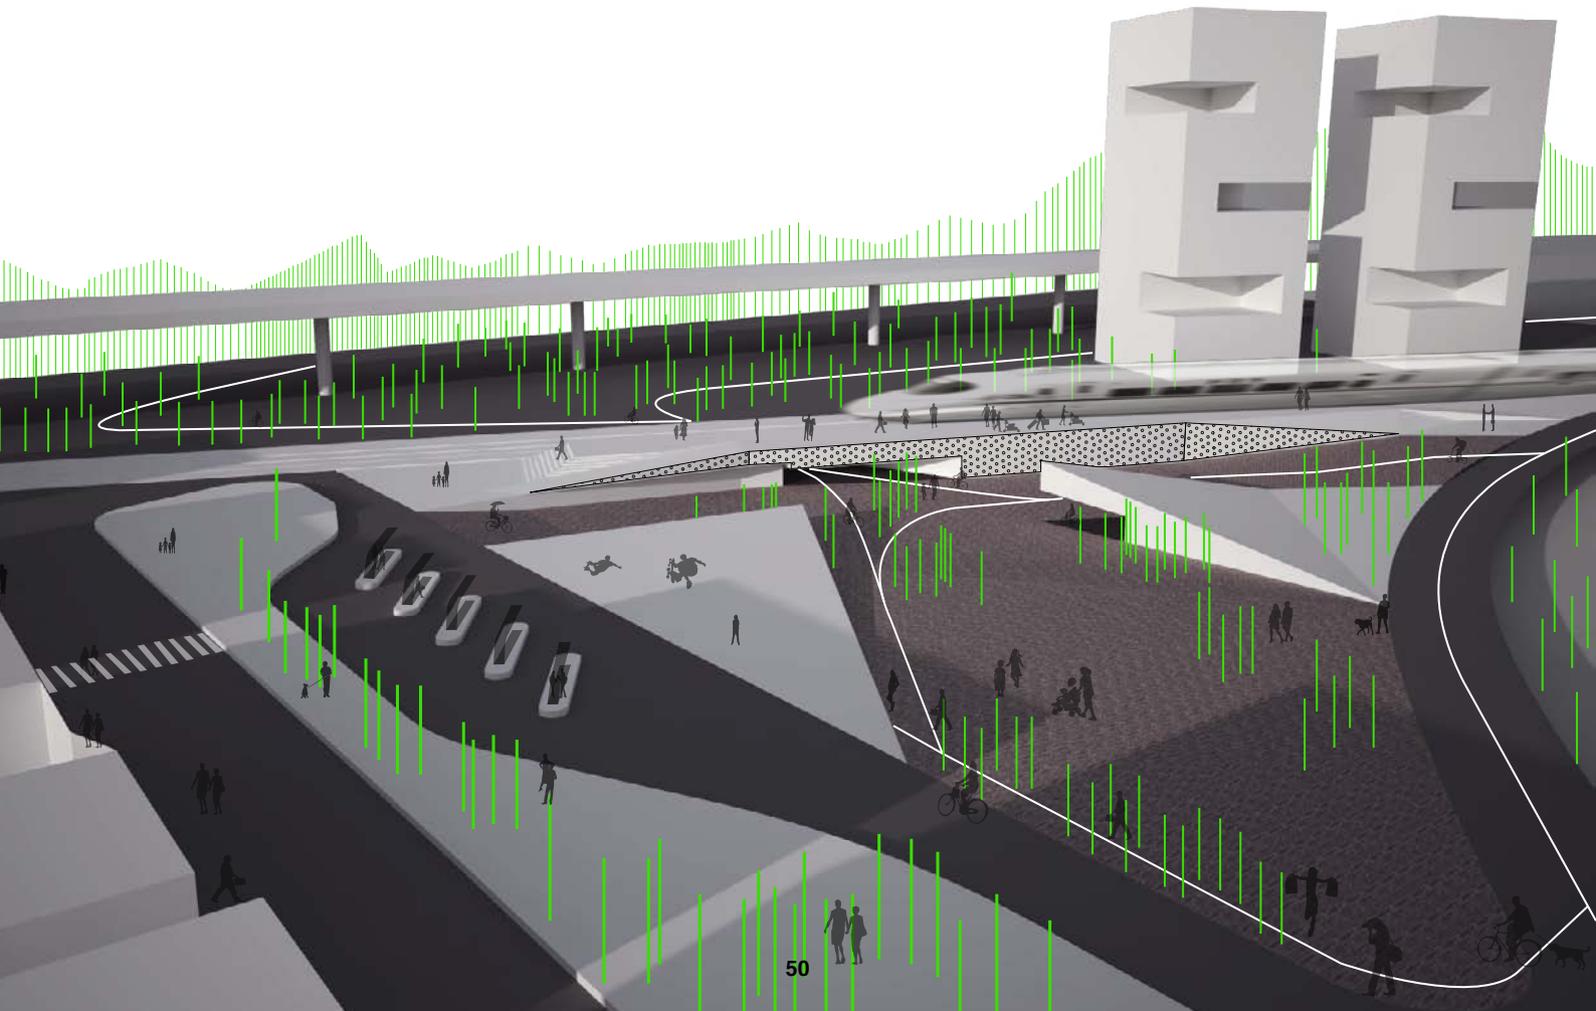

Landscaping the territory

# Generator 2: railway station area

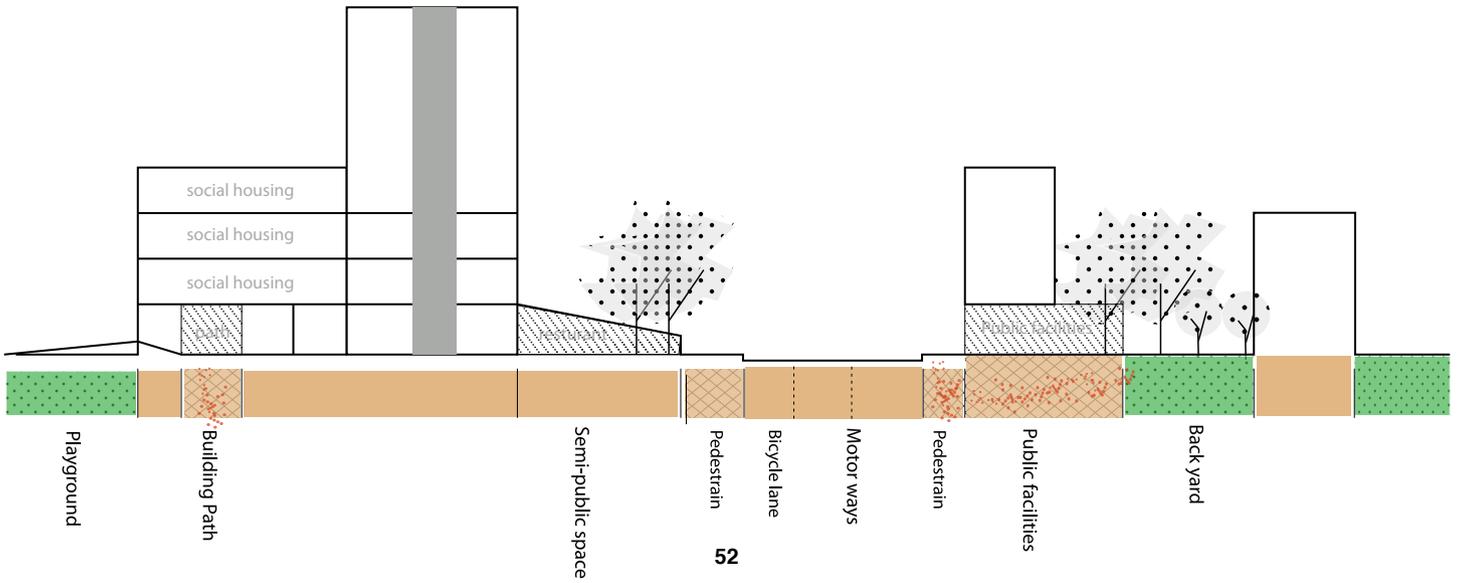

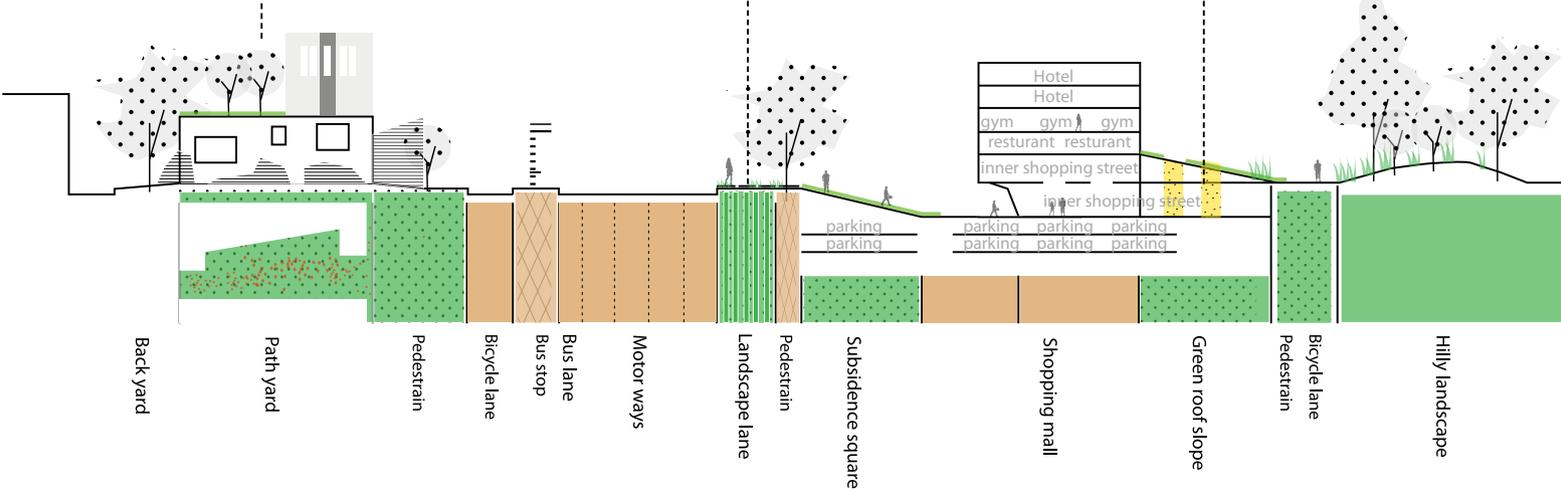

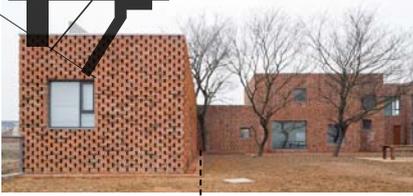

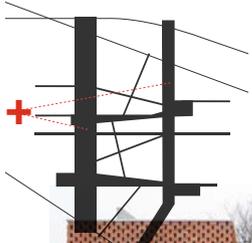

Landscaping the territory

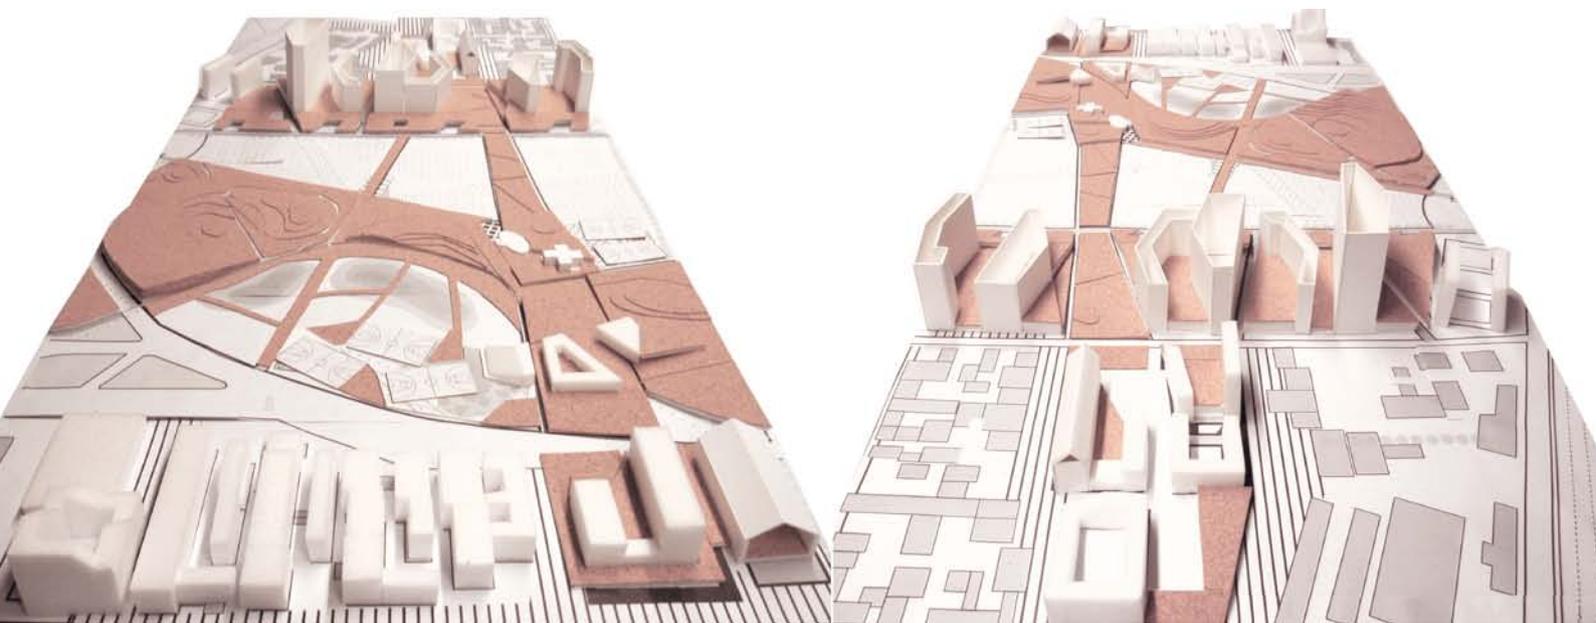

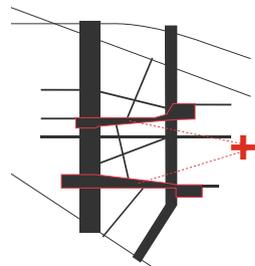

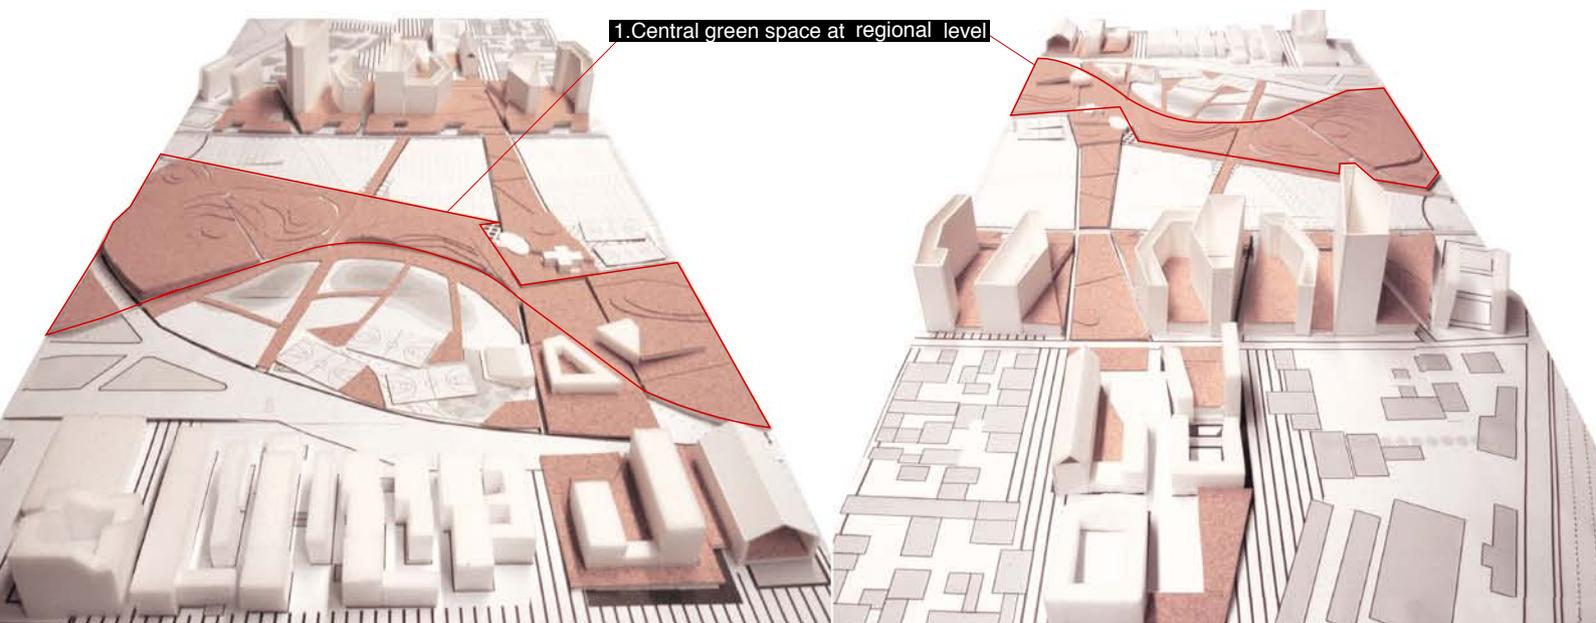

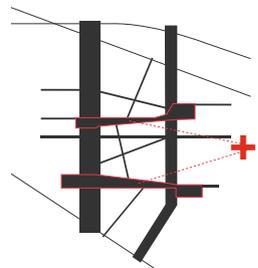

# Activation on the edges

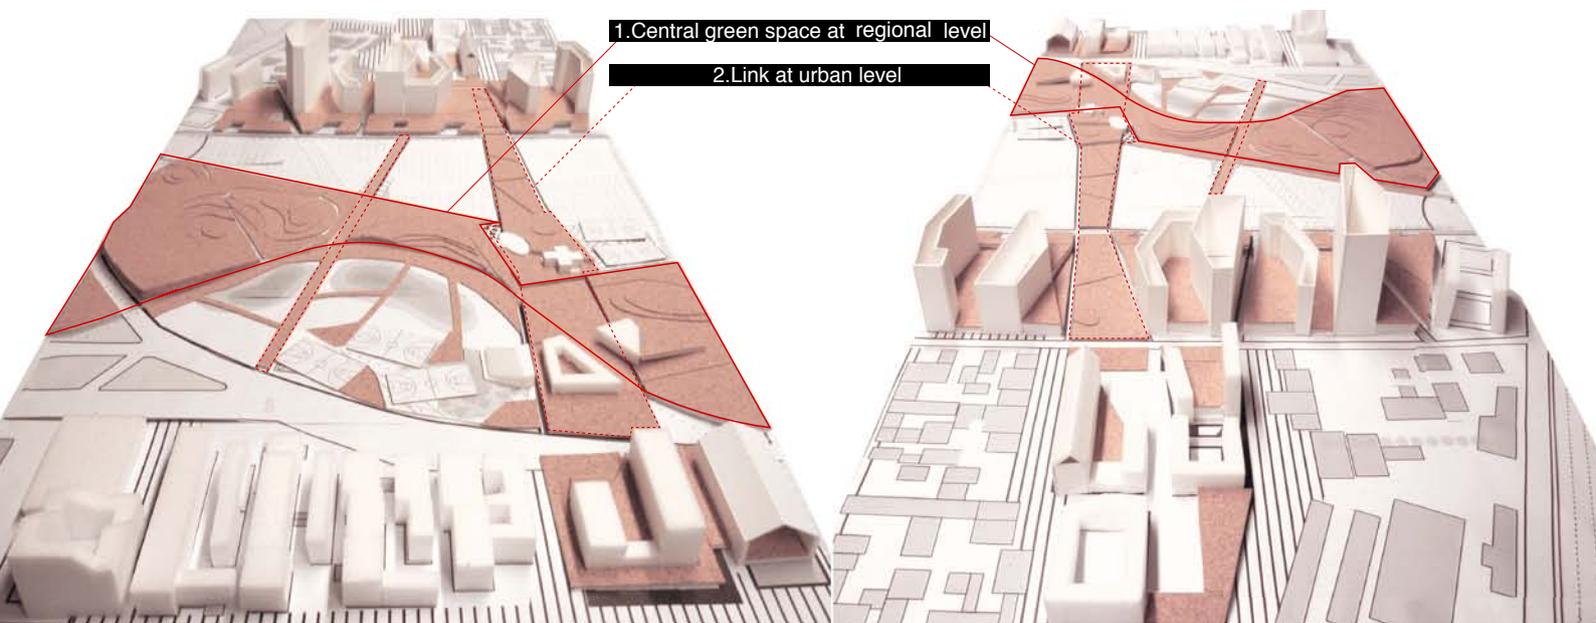

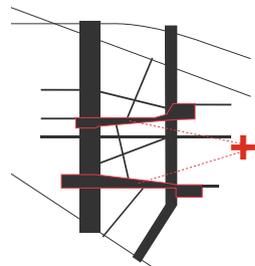

# Inter-linkages

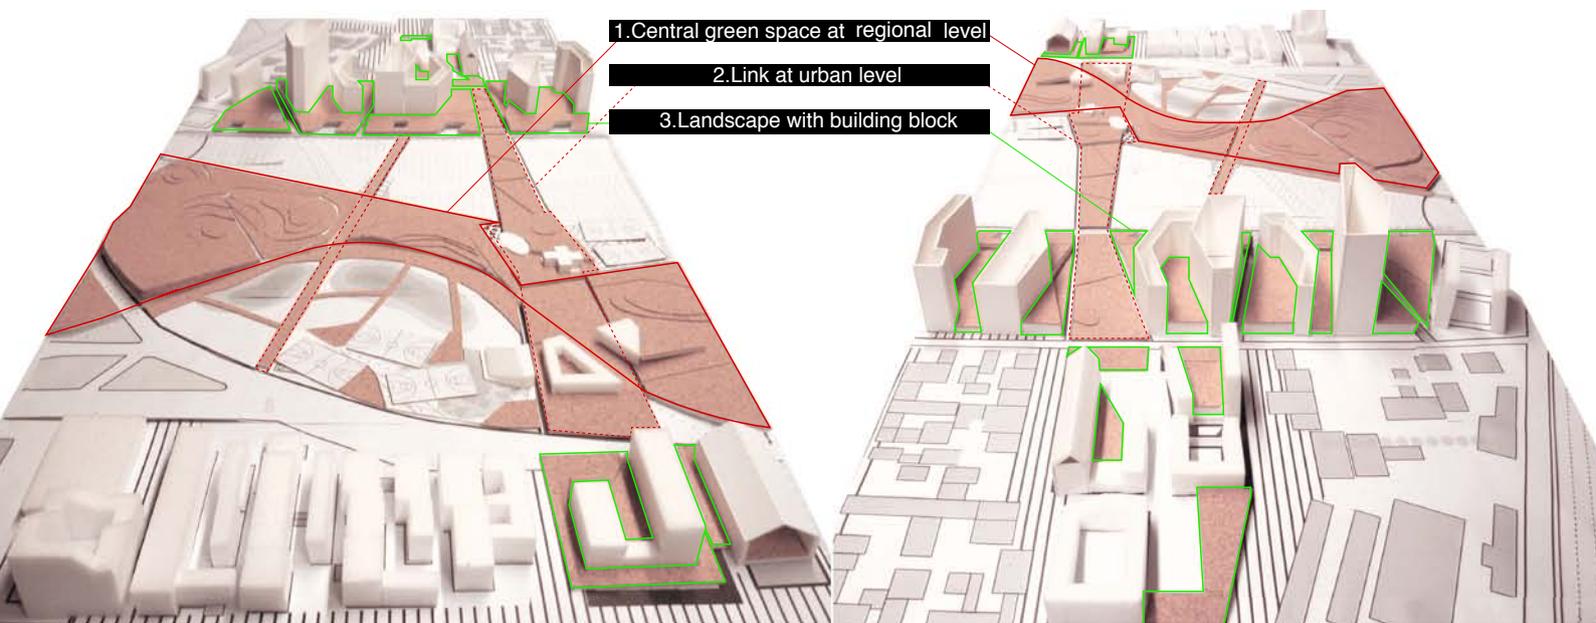

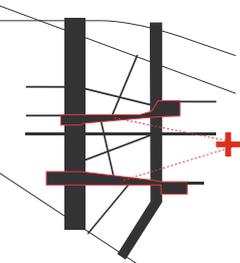

# Inter-linkages

# Interlinkages

Diverse  
Typology of public space

# Interlinkages

Diverse  
Typology of public space & Morphology of landscape

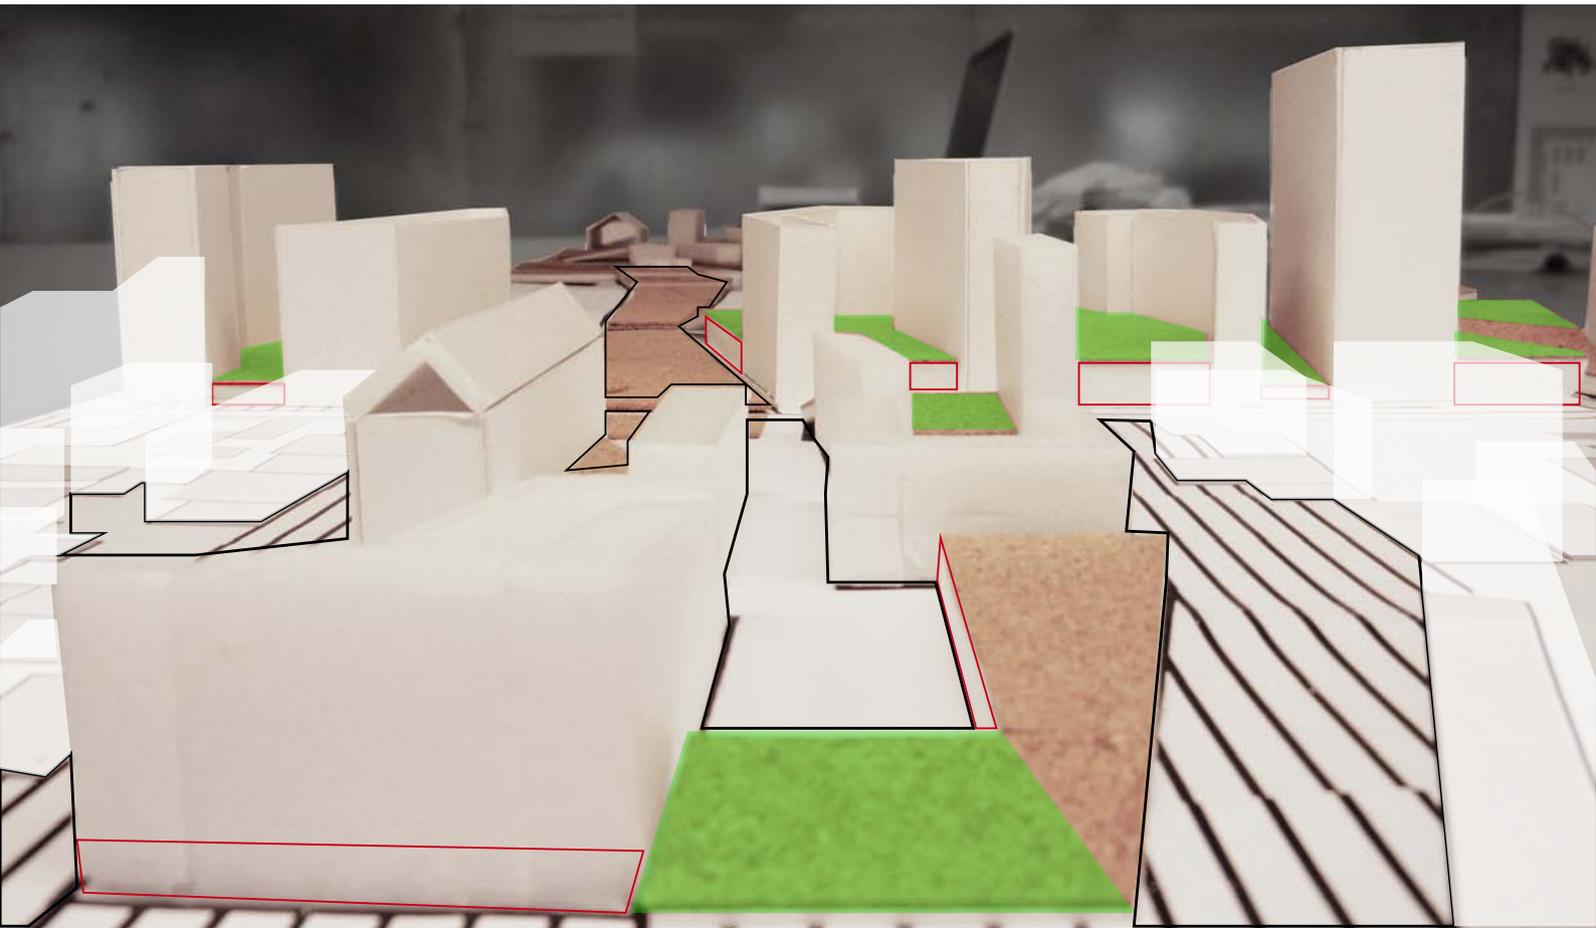

# Inter-linkages

Regenerated  
"city village" neighbourhood

Memory of local yard & street morphology

-  accessibility space
-  semi-public space
-  landscape

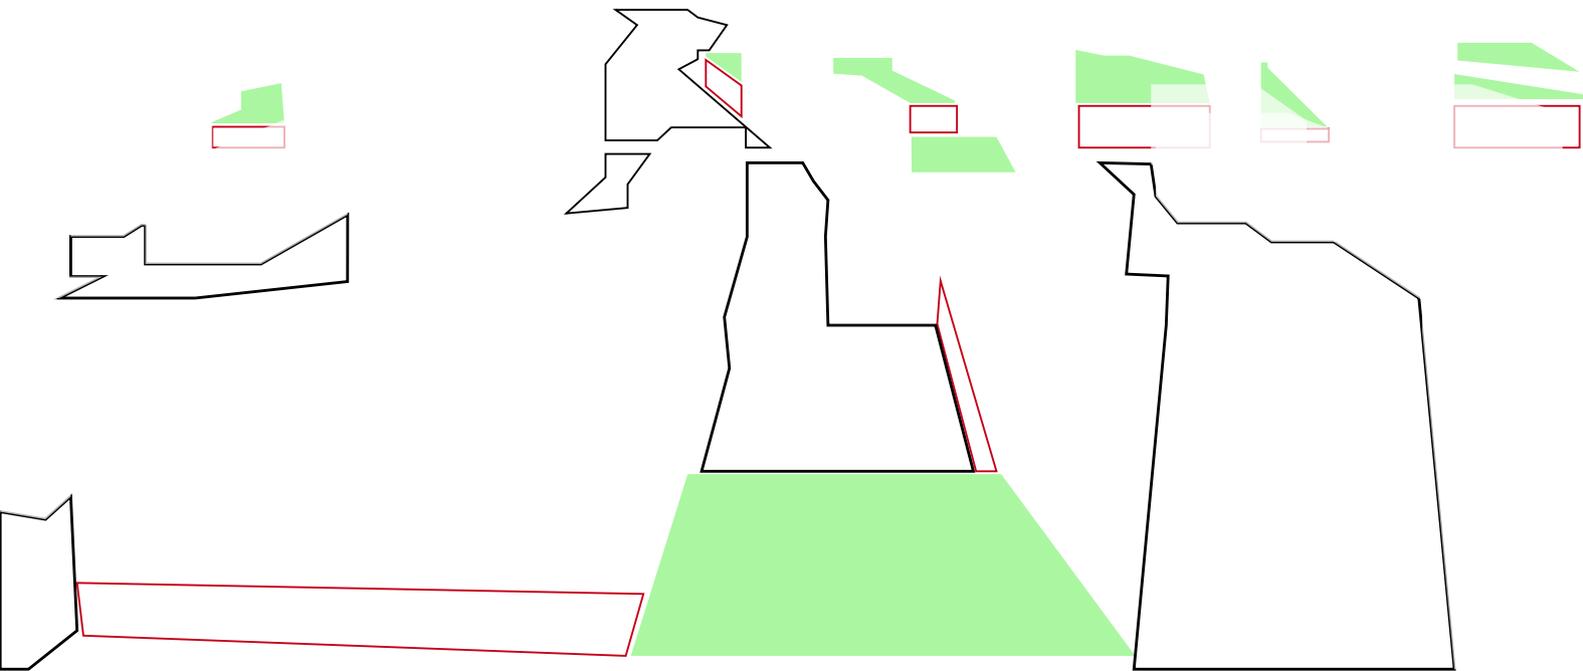

# Inter-linkages

Regenerated  
"city village" neighbourhood

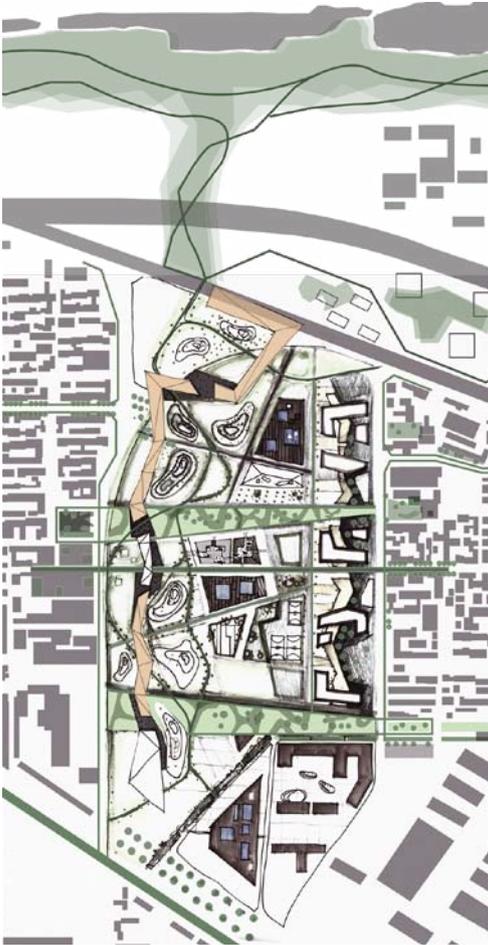

-  accessibility space
-  semi-public space
-  landscape

Various layers of permeable landscape

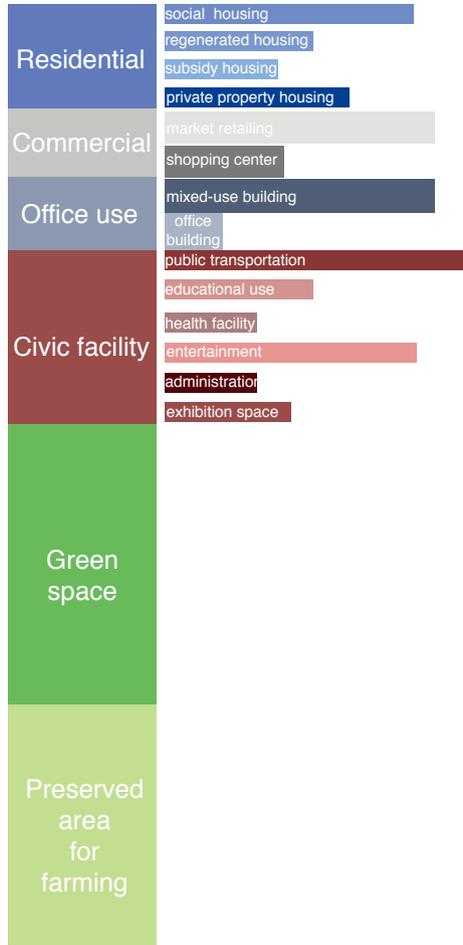

# Design Possible programming illustration 2020+

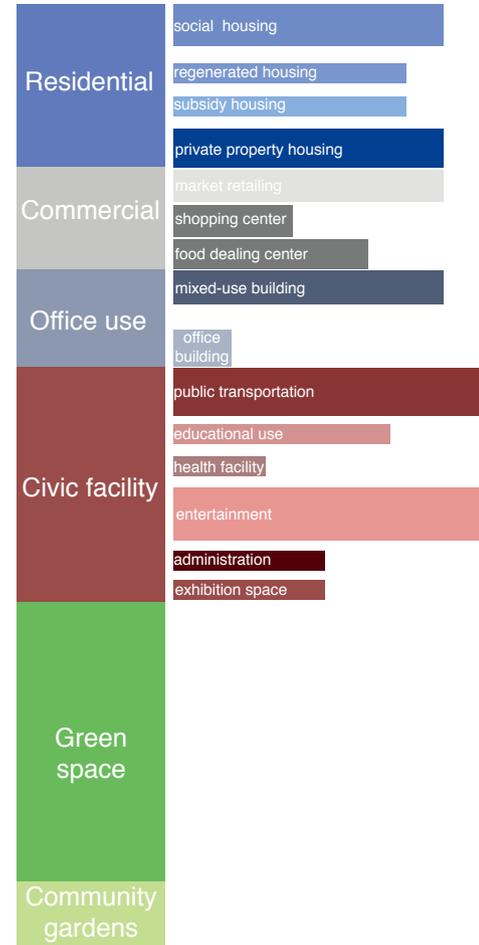

Cluster of public spaces

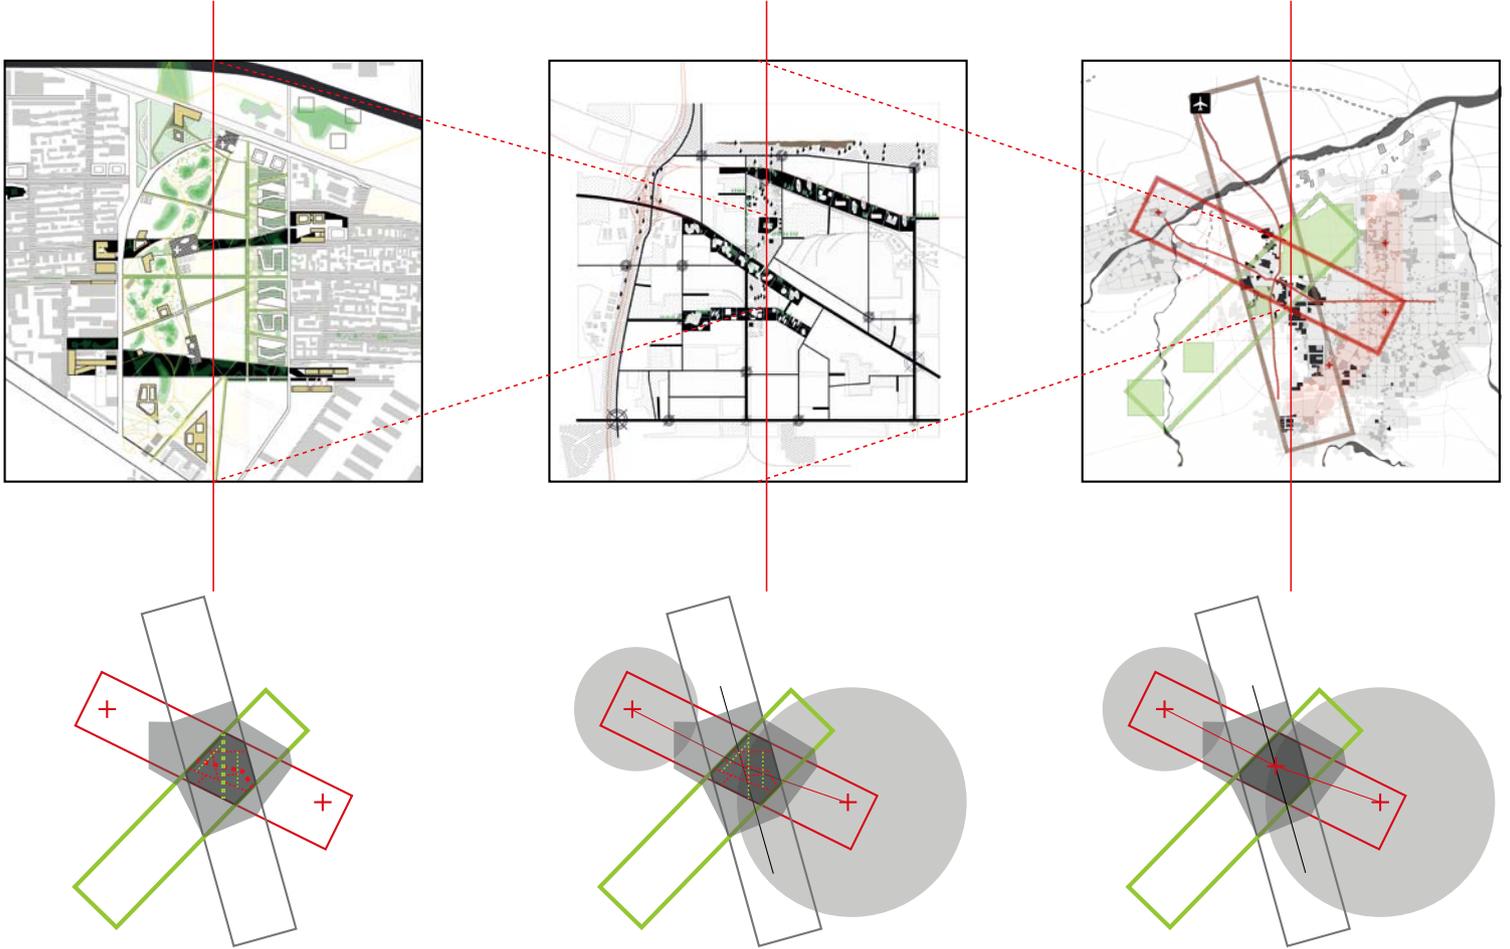

Landuse of starting program

Landuse 2020+

# Conclusion

1. transform the "dead urban edges" to active linkages between the new development at regional level and existing local value spatially and functionally.
2. propose different layers of public space network, considering landscaping, flow circulation, and semi-public space to achieve the urban dynamics.
