

Compact nature for Compact cities

Menno de Roode

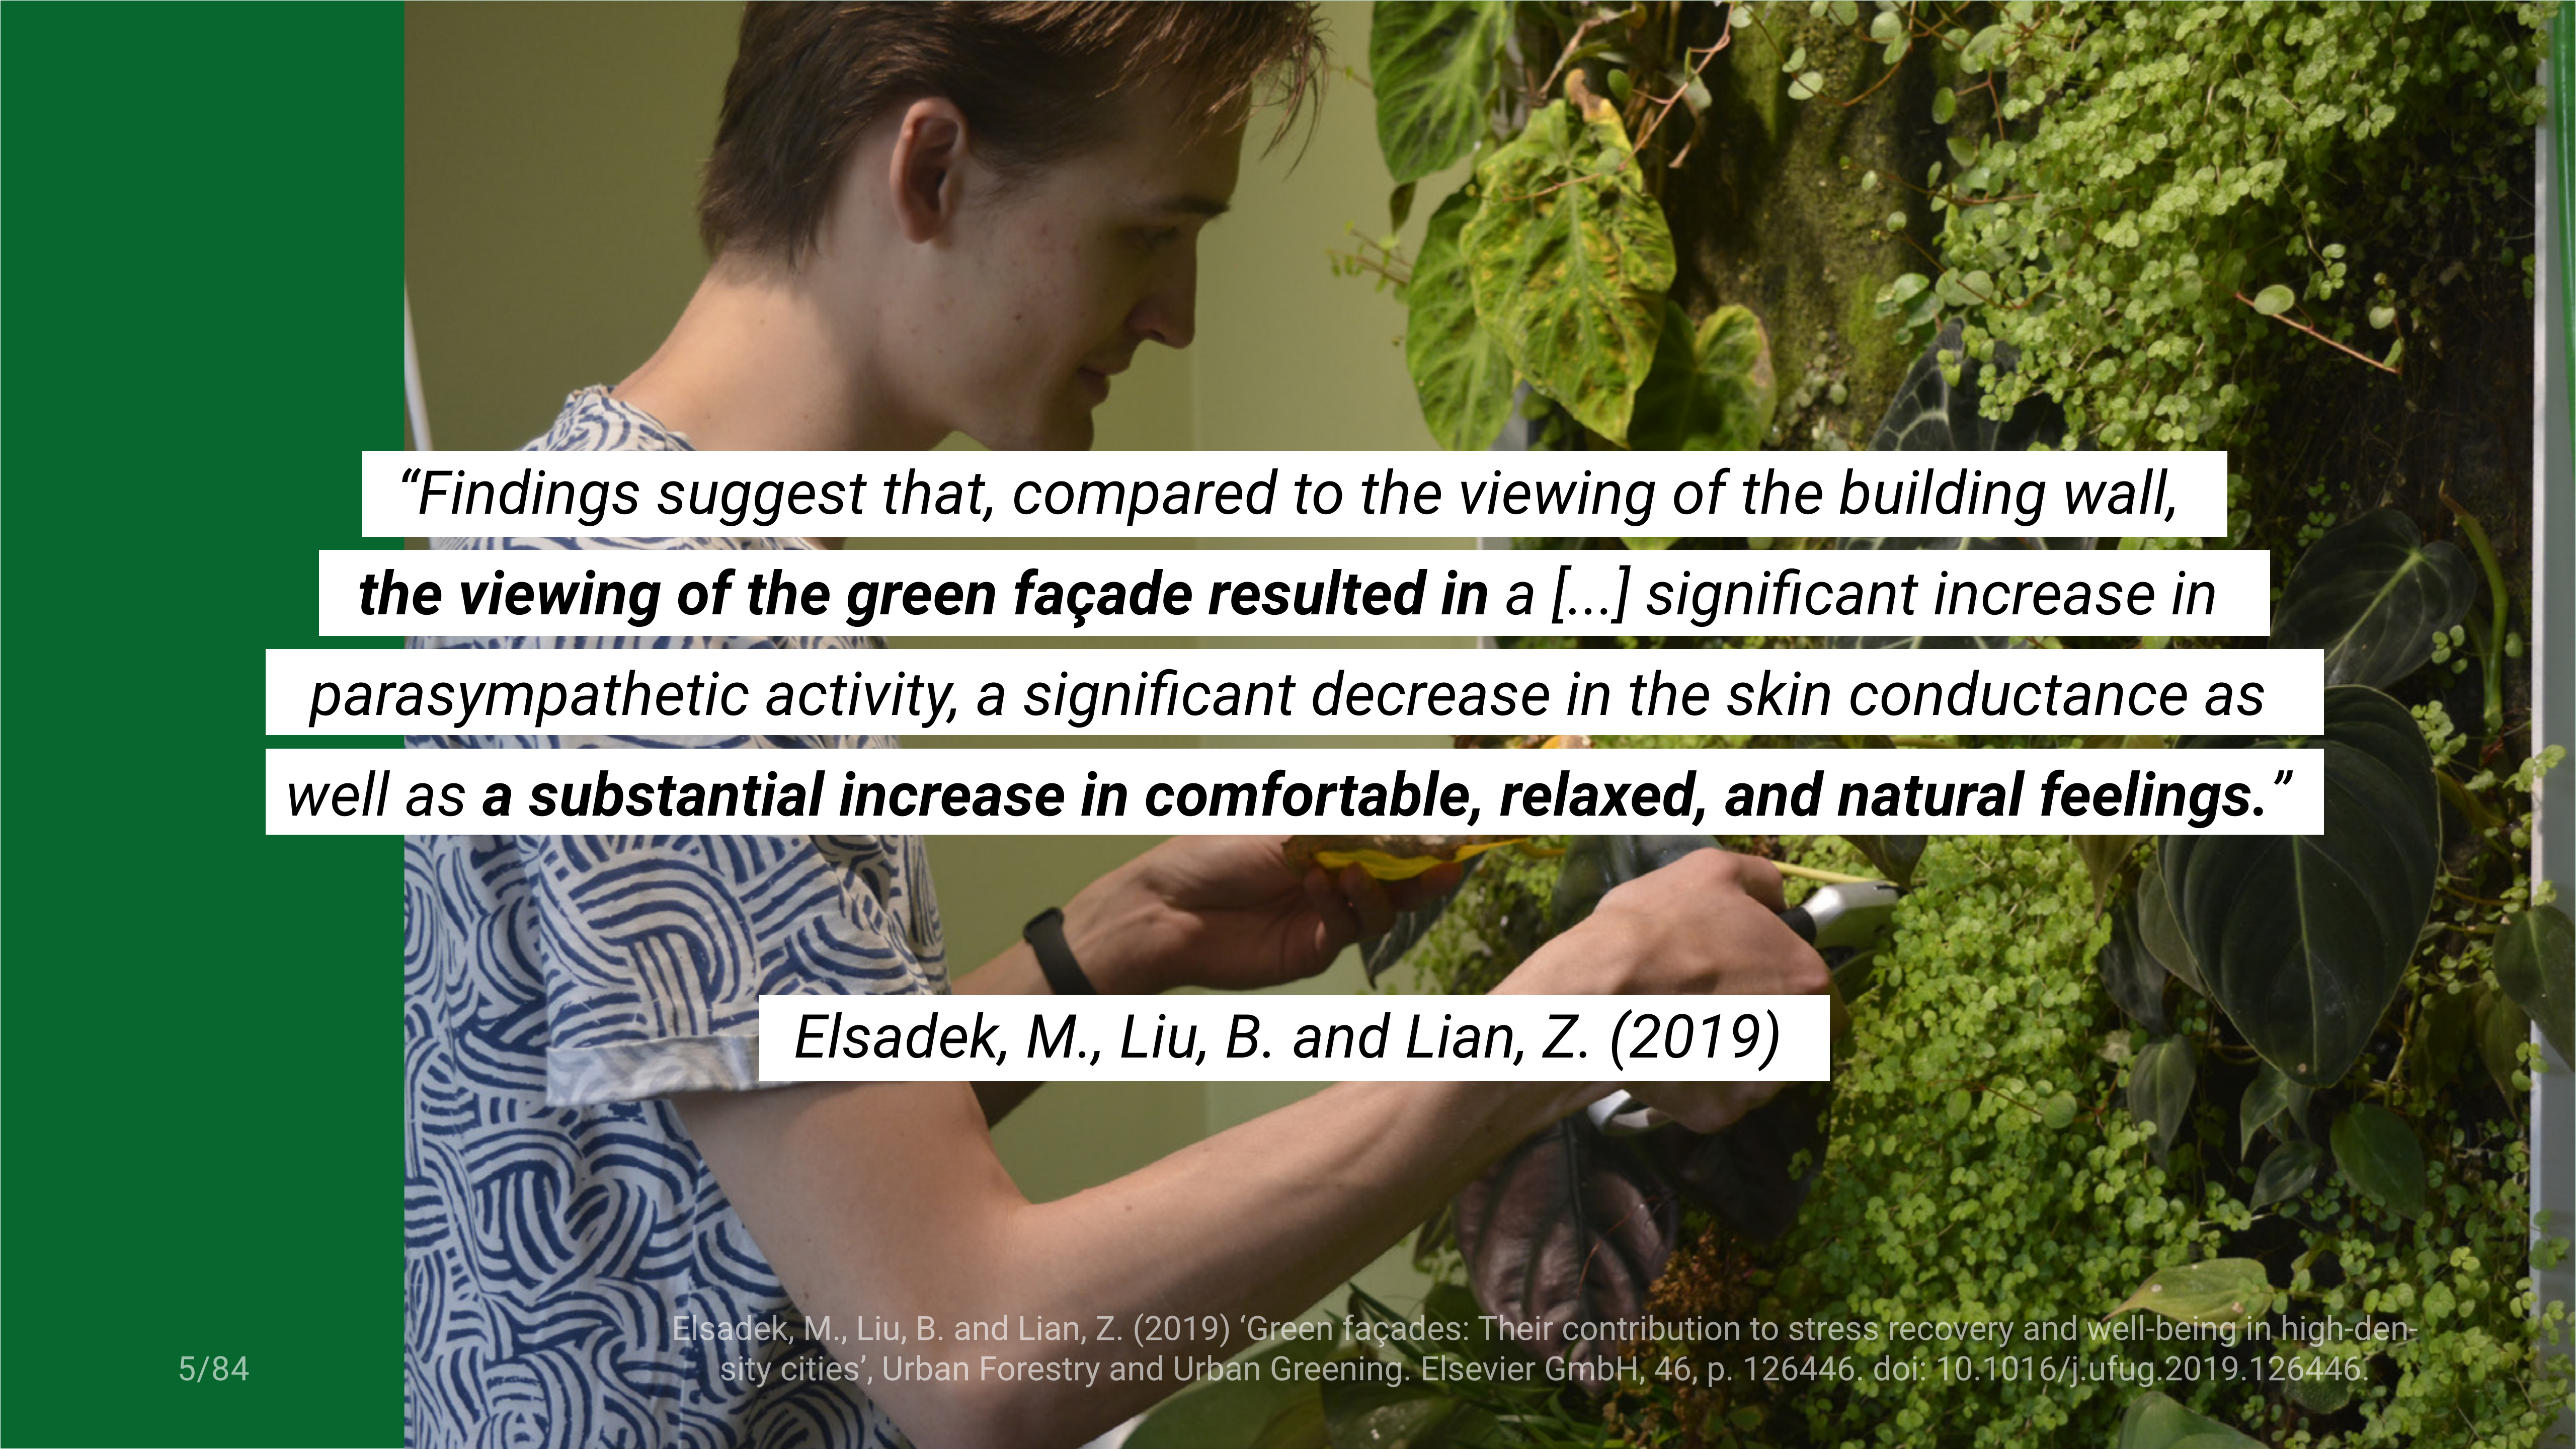

P5 Graduation presentation July 2nd 2021

1st mentor: Dr. Ir. N.M.J.D. (Nico) Tillie | 2nd mentor: Dr. Ir. R.M. (Remon) Rooij | 3rd mentor: Dr.Ir. M. (Marc) Ottele

A person with short brown hair, wearing a blue and white patterned shirt, is shown in profile, looking down at a green wall. The wall is covered in various green plants, including large leaves and small, dense clusters of leaves. The person's hands are visible, holding a small plant and a tool, possibly a glue gun, as they work on the wall. The background is a solid green color.

*“Findings suggest that, compared to the viewing of the building wall, **the viewing of the green façade resulted in a [...] significant increase in parasympathetic activity, a significant decrease in the skin conductance as well as a substantial increase in comfortable, relaxed, and natural feelings.**”*

Elsadek, M., Liu, B. and Lian, Z. (2019)

Elsadek, M., Liu, B. and Lian, Z. (2019) 'Green façades: Their contribution to stress recovery and well-being in high-density cities', *Urban Forestry and Urban Greening*. Elsevier GmbH, 46, p. 126446. doi: 10.1016/j.ufug.2019.126446.

Why include green space in cities?

Biophilia

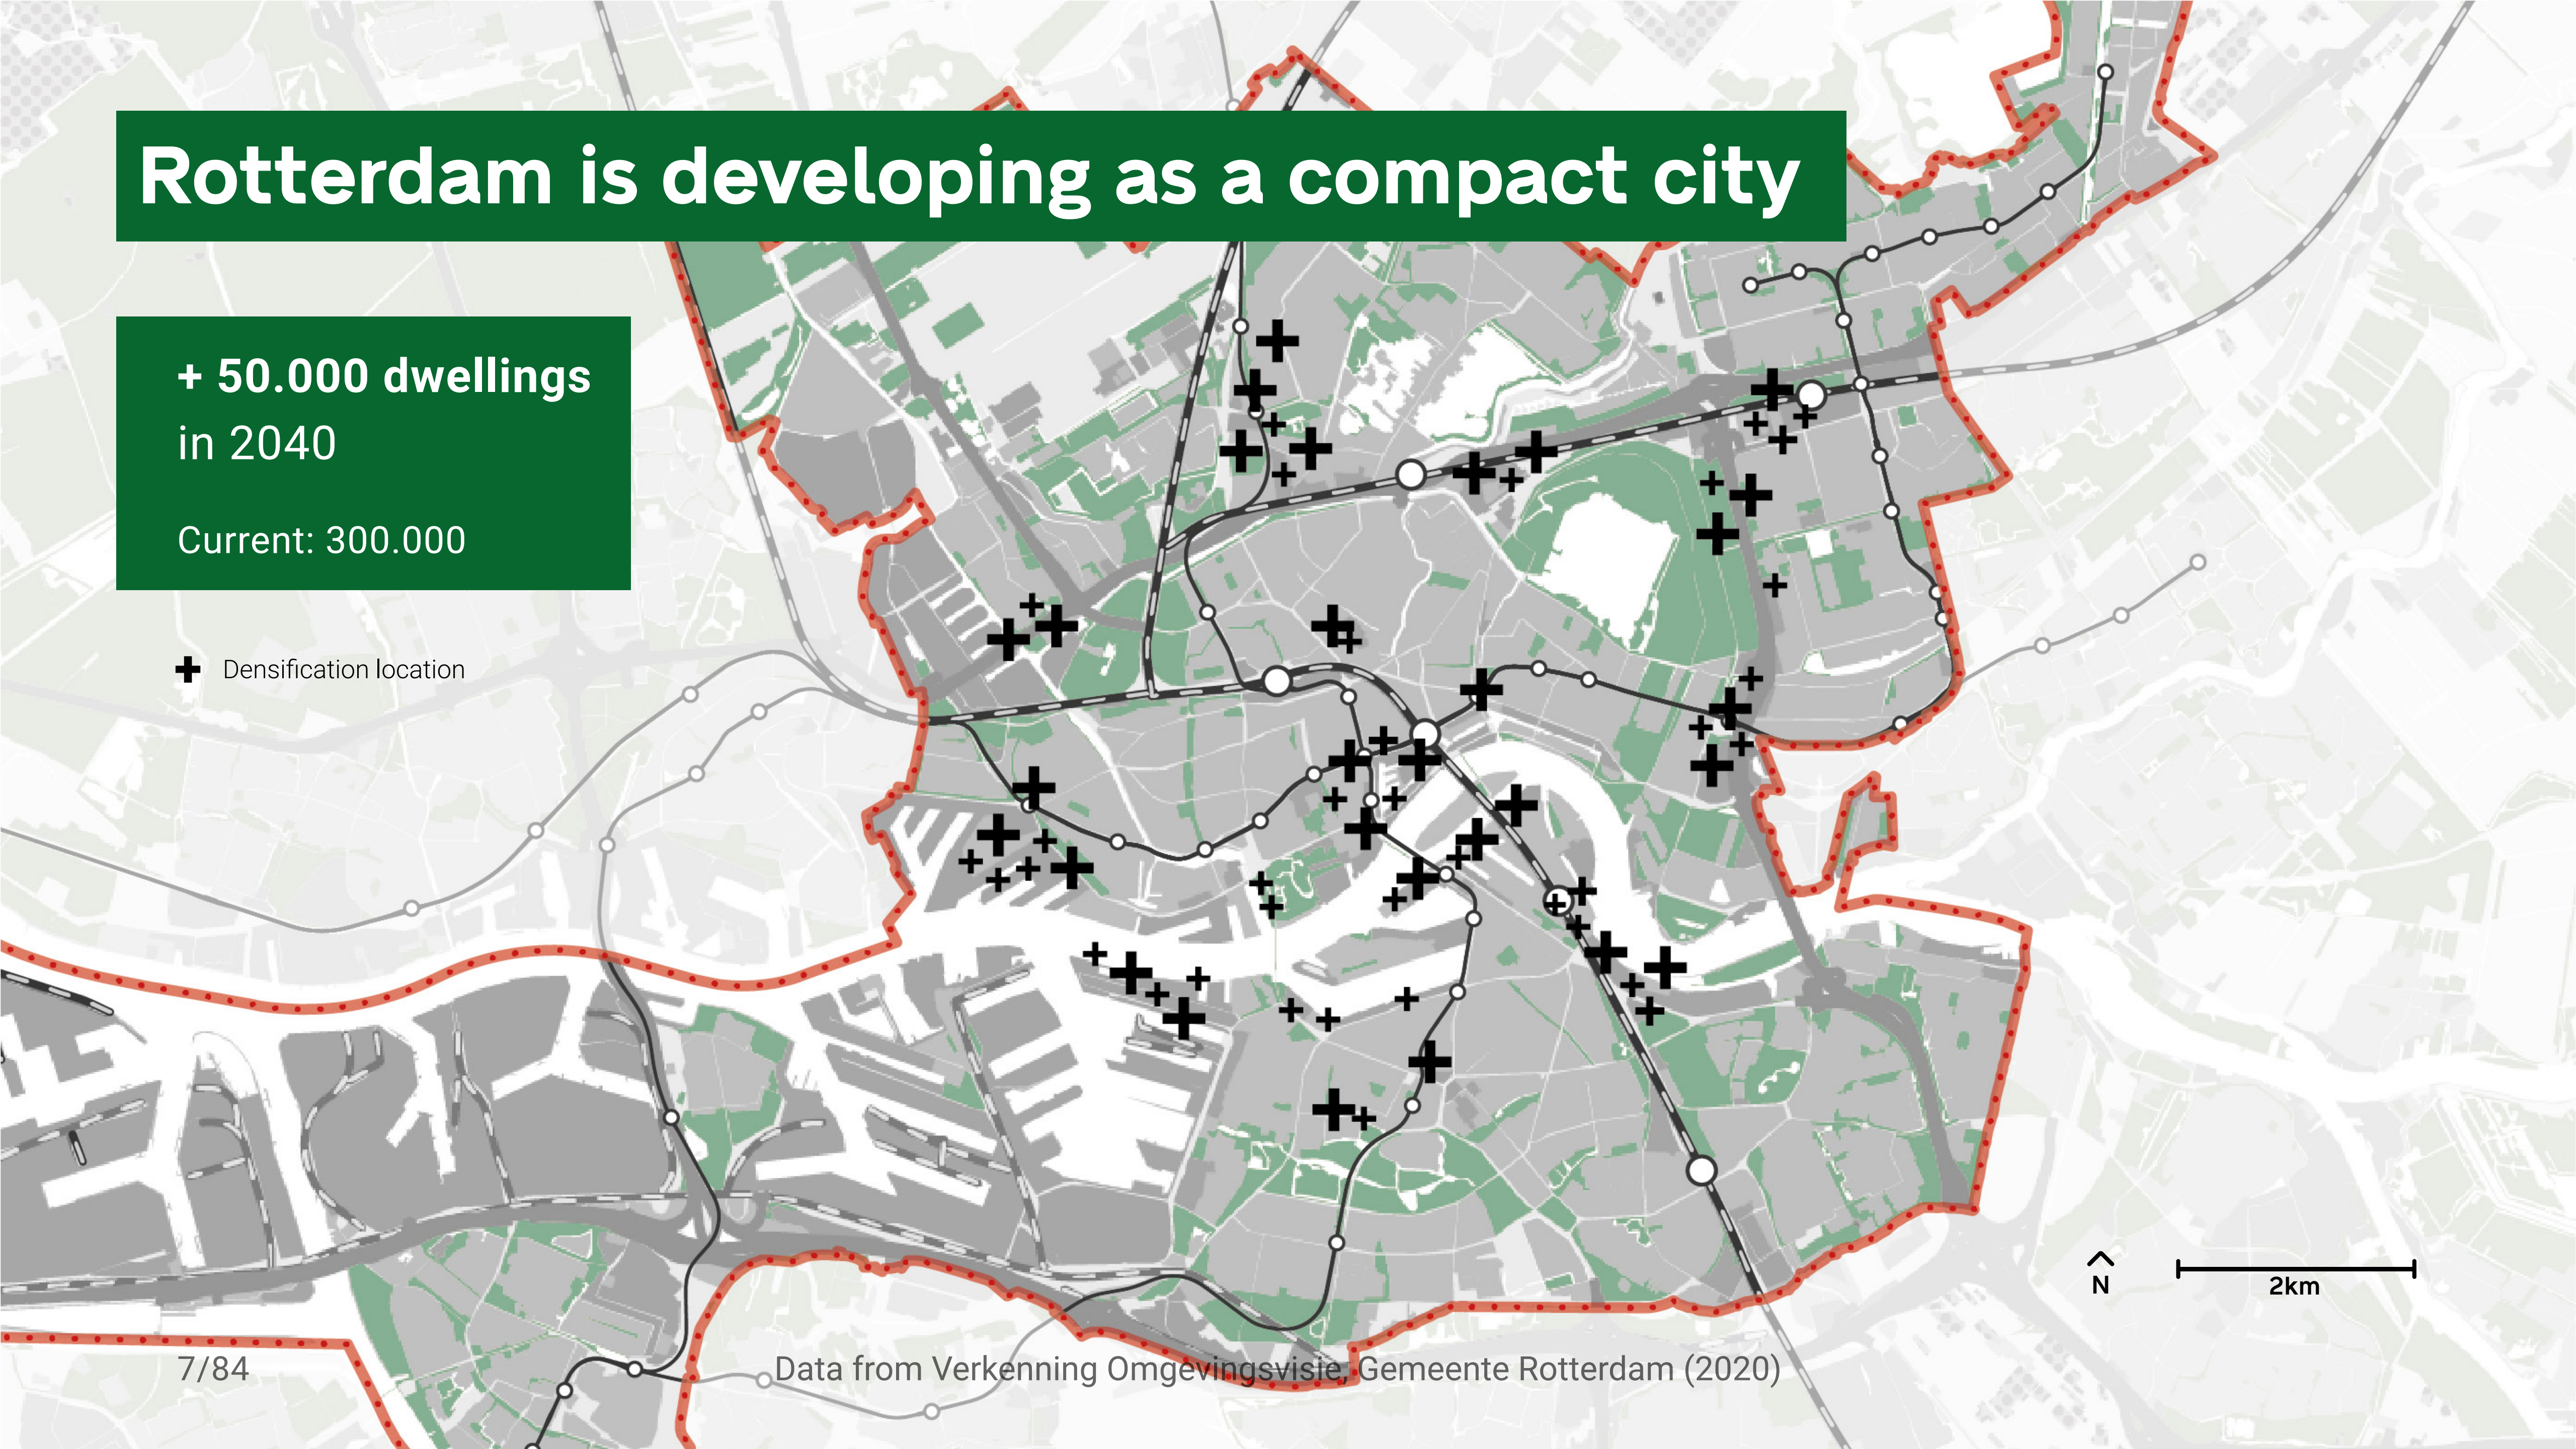

Ecological crisis

Rotterdam is developing as a compact city

+ 50.000 dwellings
in 2040

Current: 300.000

+ Densification location

Rotterdam is developing as a compact city

- + Den­sification location
- Compact centre

Need for true integration of built structures and green space

Need for true integration of built structures and green space

*Why should one have to **walk to** the park, shouldn't the city **be** the park?*

(Beatley, 2017, p. 49)

Main research question

What **framework** can be used to guide the development of **compact urban green space** in Rotterdam that addresses both the quality, in terms of **well-being** and **ecology**, as well as the **spatial-ecological structure**?

This presentation

1. **Ecological resilience**

2. **Well-being** related to urban green space

3. **Compact urban green space patterns** that contribute to ecological resilience and well-being

4. **Spatial vision and strategy** to guide the development of the compact urban green space patterns in Rotterdam

5. Conclusion

“How can compact urban green space improve **ecological resilience** in Rotterdam?”

Ecological resilience

Fitness

Carrying capacity

Biodiversity

Fitness

Biotope

- Dunes
- Sea clay polders
- Peat meadows
- River landscape
- Urban
- Municipality of Rotterdam
- Compact cluster

16/84

Sand

Sea clay

Peat

River clay

Urban

Carrying capacity

Protected landscapes

- Protected by Natura2000
- Meadow bird regulations
- Missing ecological connection
- Municipal border
- Compact cluster

N 10km

Urban habitats

Fresh water bodies

Street trees

Garden village

Parks

Modernistic apartments

Tidal river

Infrastructure

Renewed centre

Singels

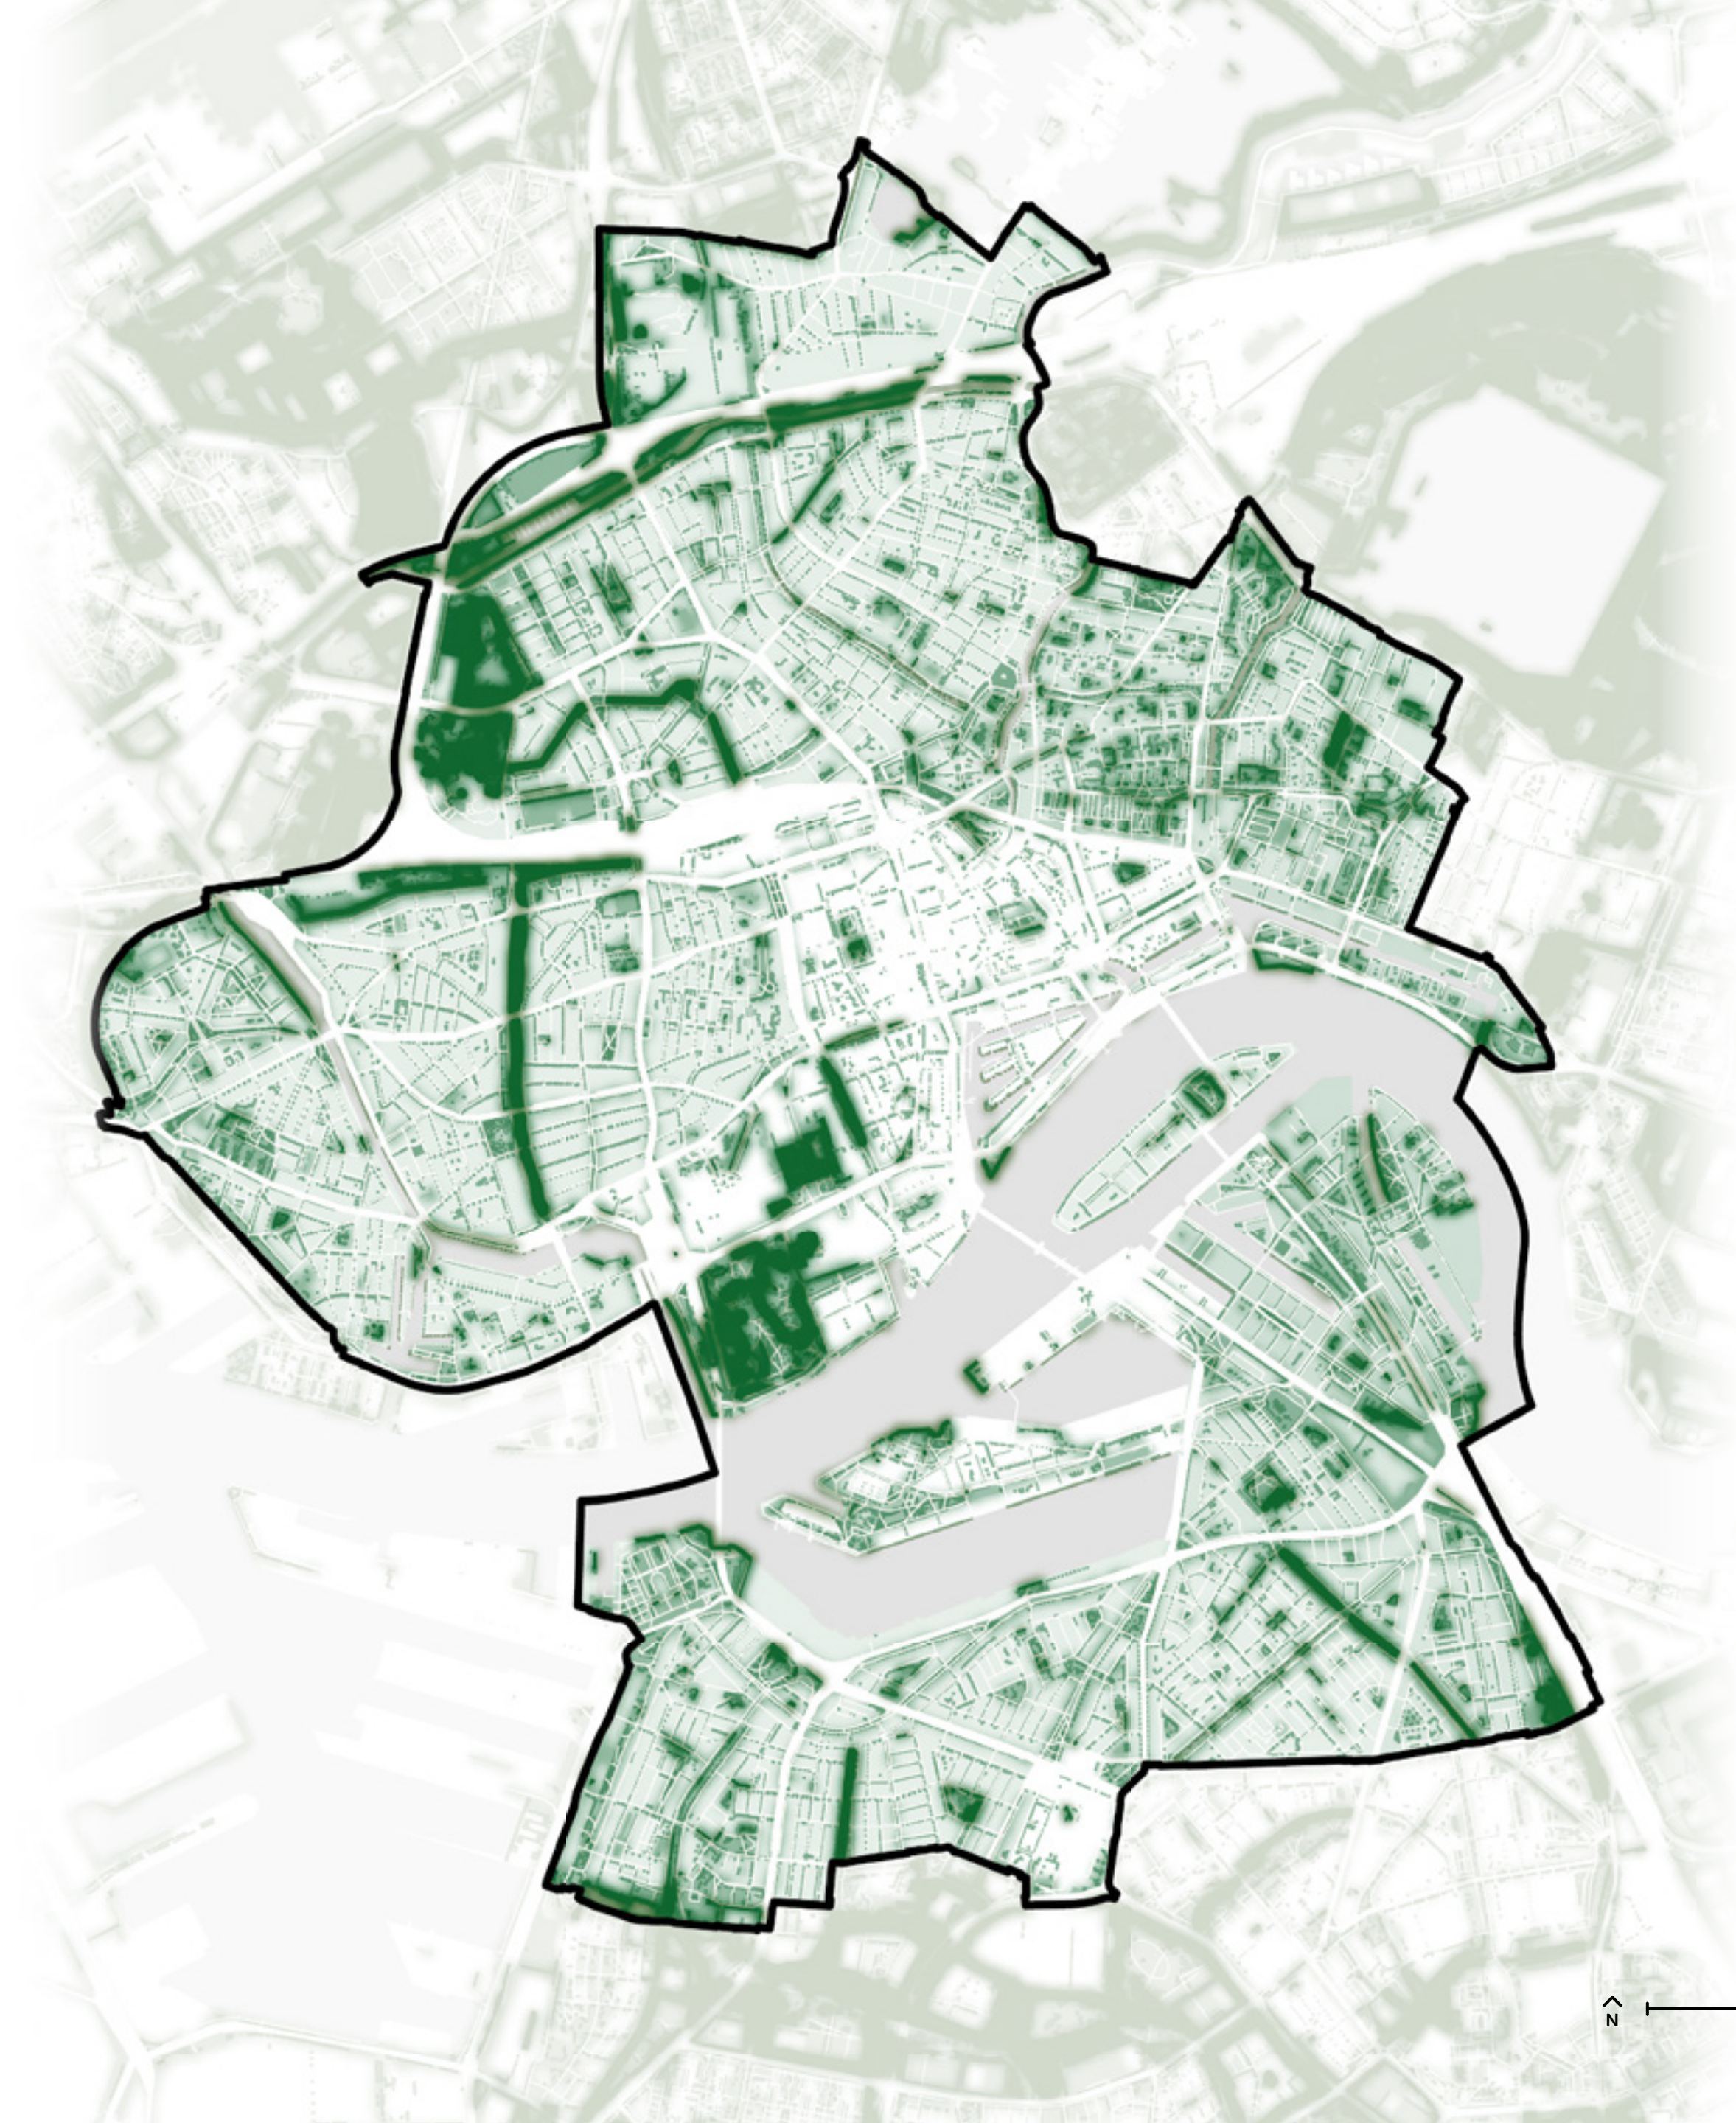

Historic rowhouses

Biodiversity

Biodiversity

Estimated biodiversity

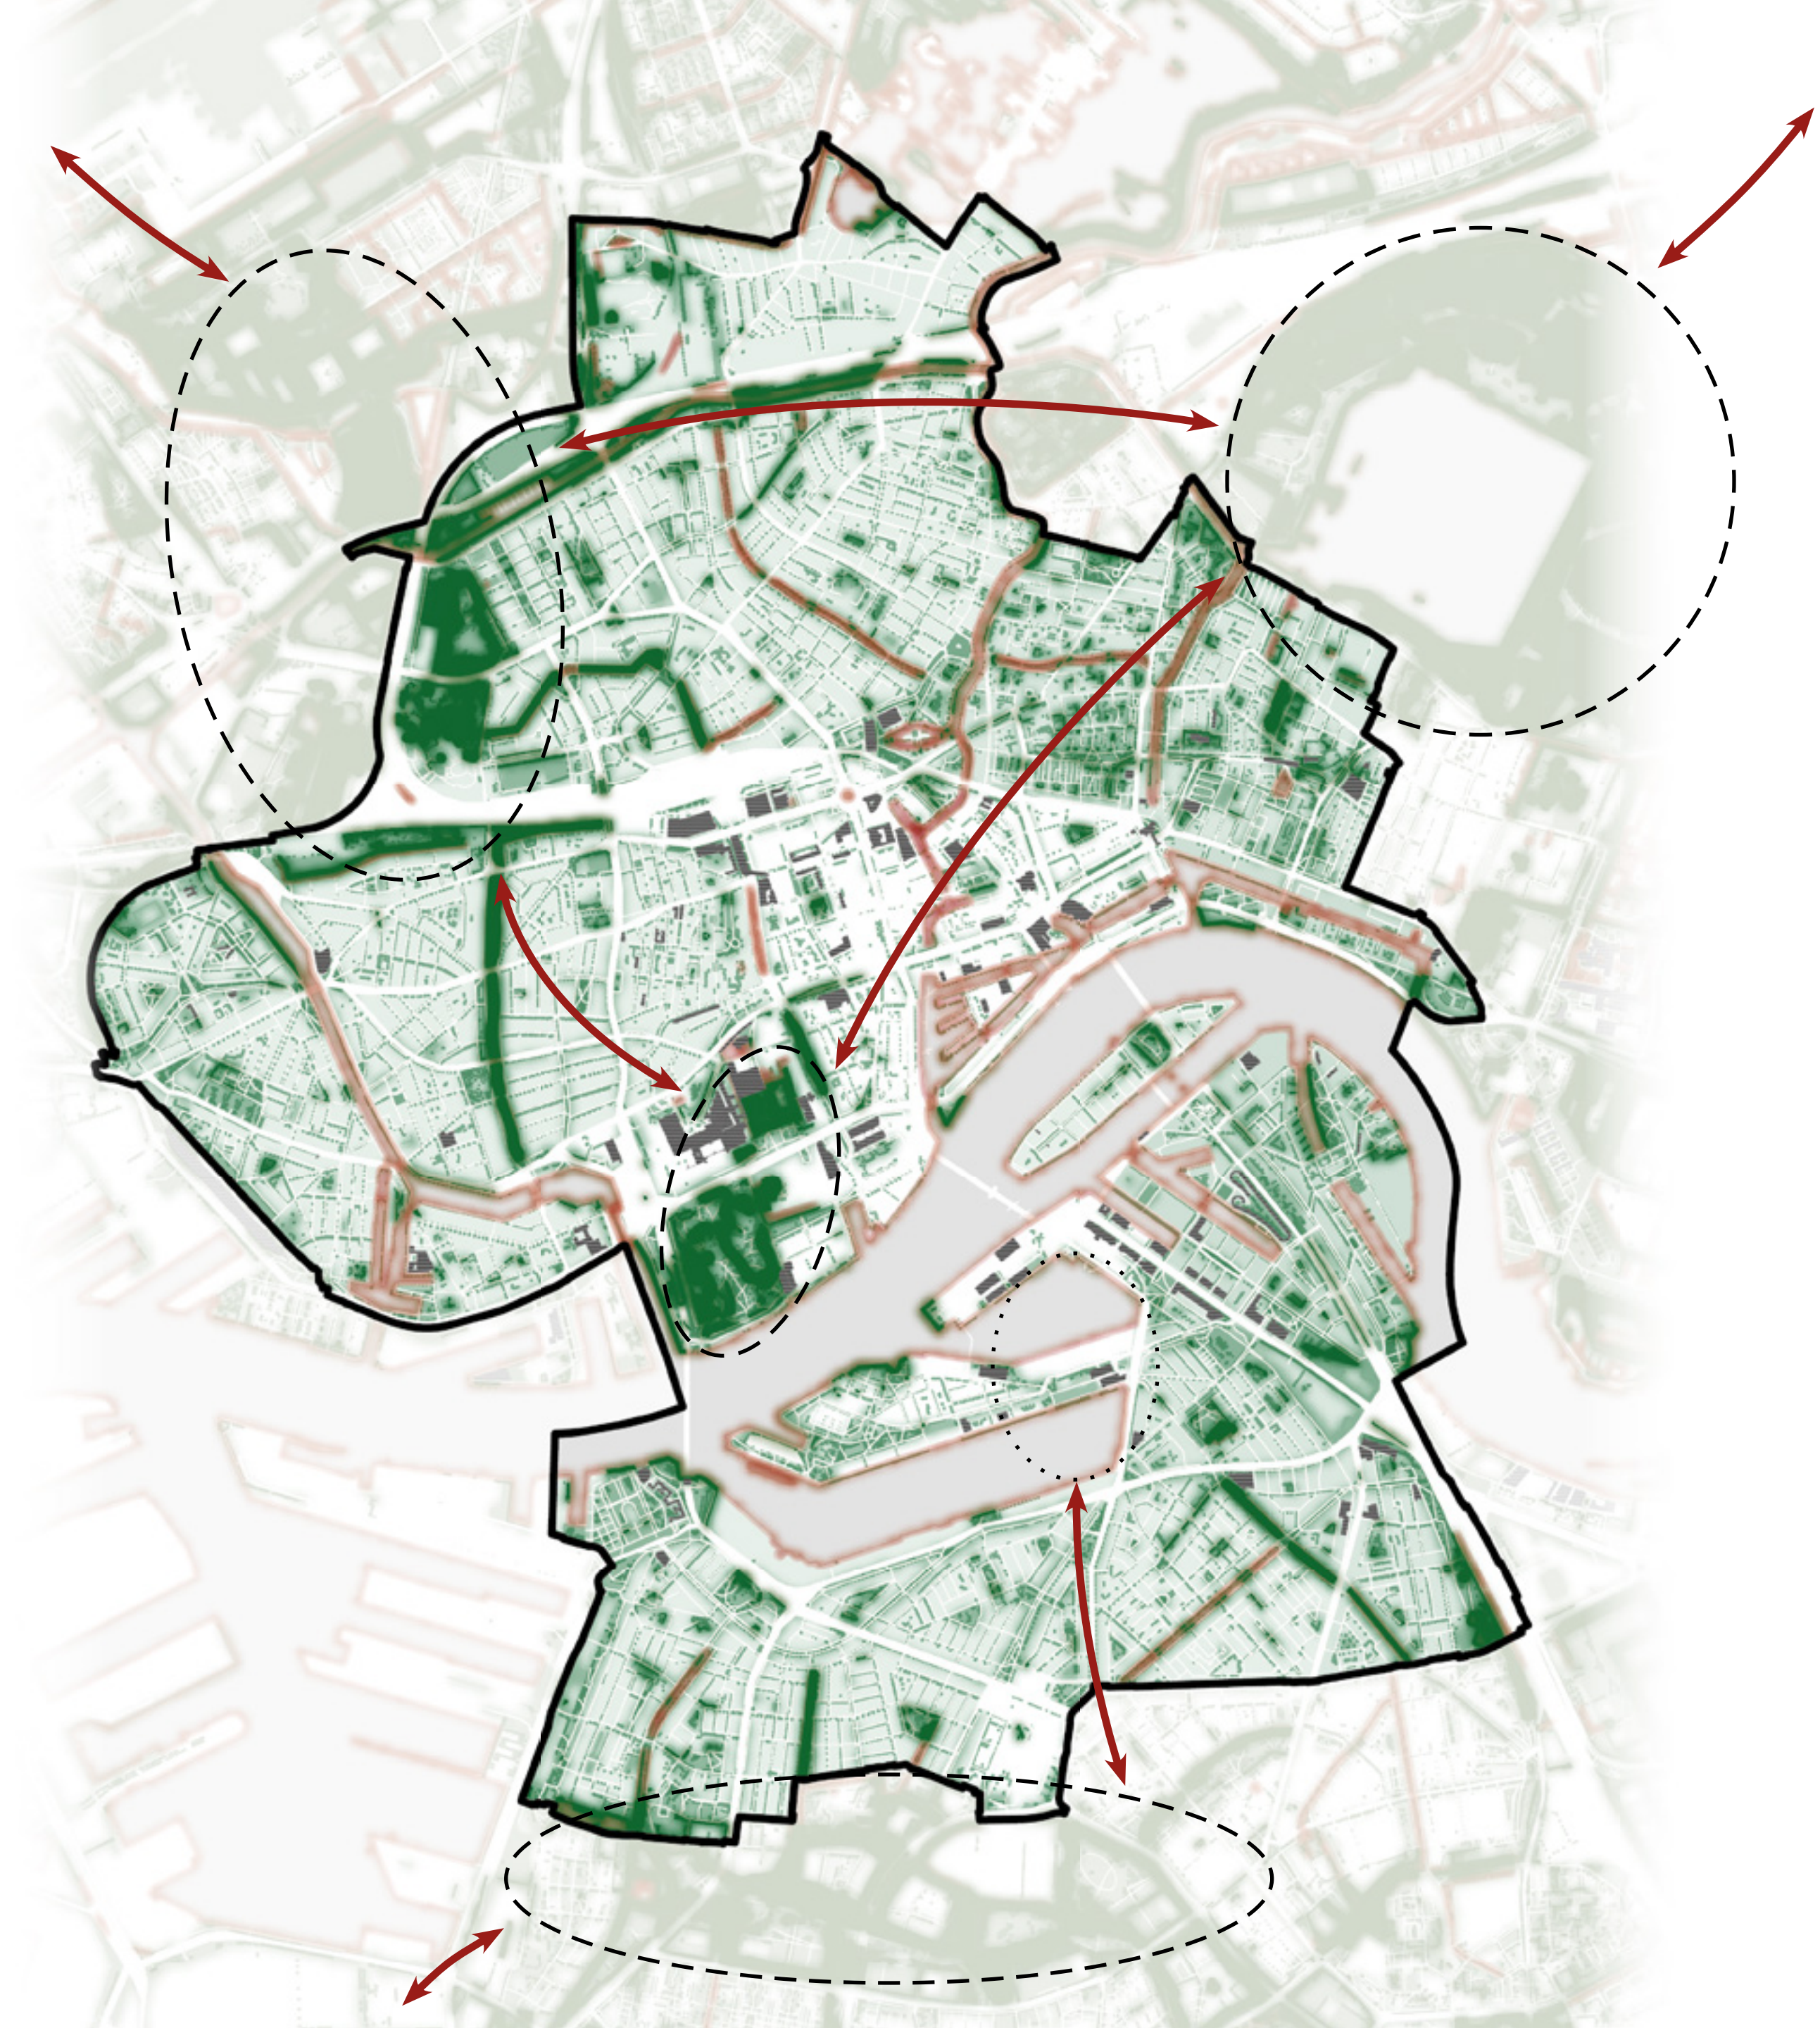

Carrying capacity

Biodiversity

Estimated biodiversity

- () High biodiversity zone
- ↔ Missing ecological connection
- Harsh border between water and land

Compact urban green space can improve **ecological resilience** in Rotterdam by:

- **Increasing fitness** by connecting to the natural biotopes and by providing space for natural processes

- **Increasing the carrying capacity** by forming ecological networks

- **Increasing the biodiversity** by providing diverse (and preferably large) habitats

“How can compact urban green space improve **well-being** in Rotterdam?”

Well-being

Health

Physical
Mental

Social development

Education
Safety
Recreation

Belonging

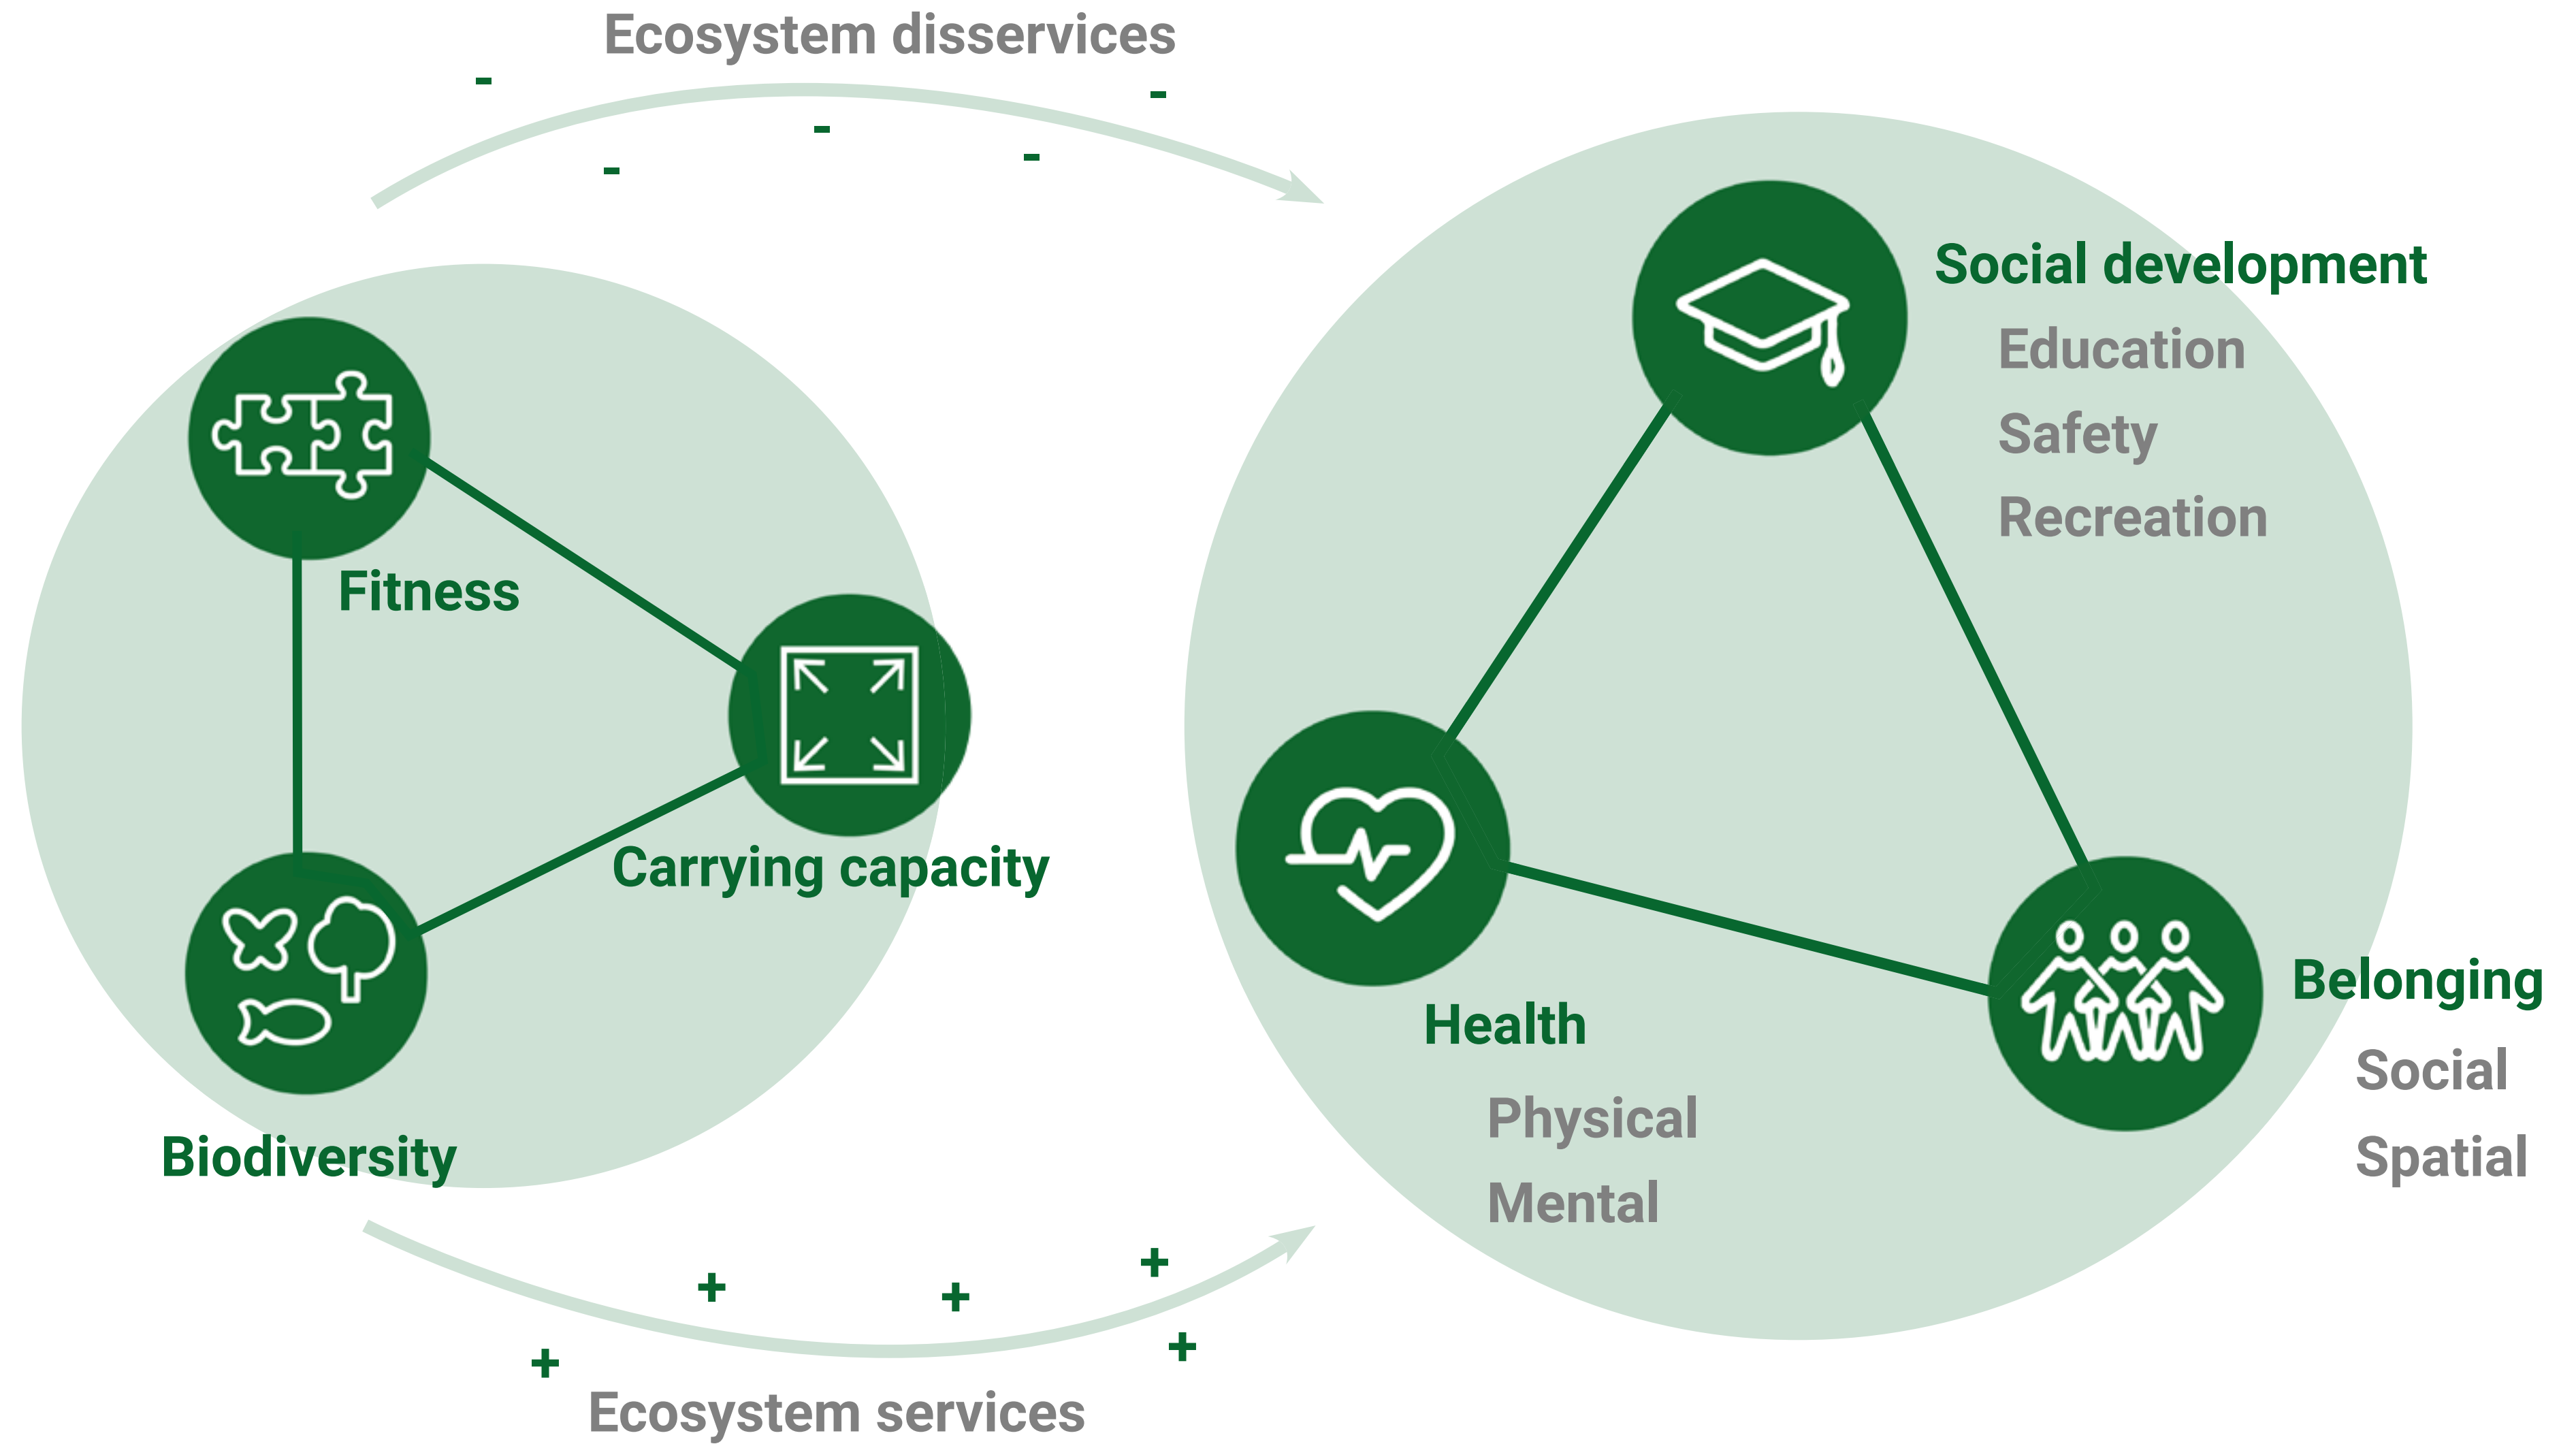

Social
Spatial

PAS OP!

Park at your own risk”**

Ecological resilience

Well-being

Health

Over 30% of the inhabitants do not have a cool space close to home during a heatwave
(Gemeente Rotterdam, 2020. p. 10)

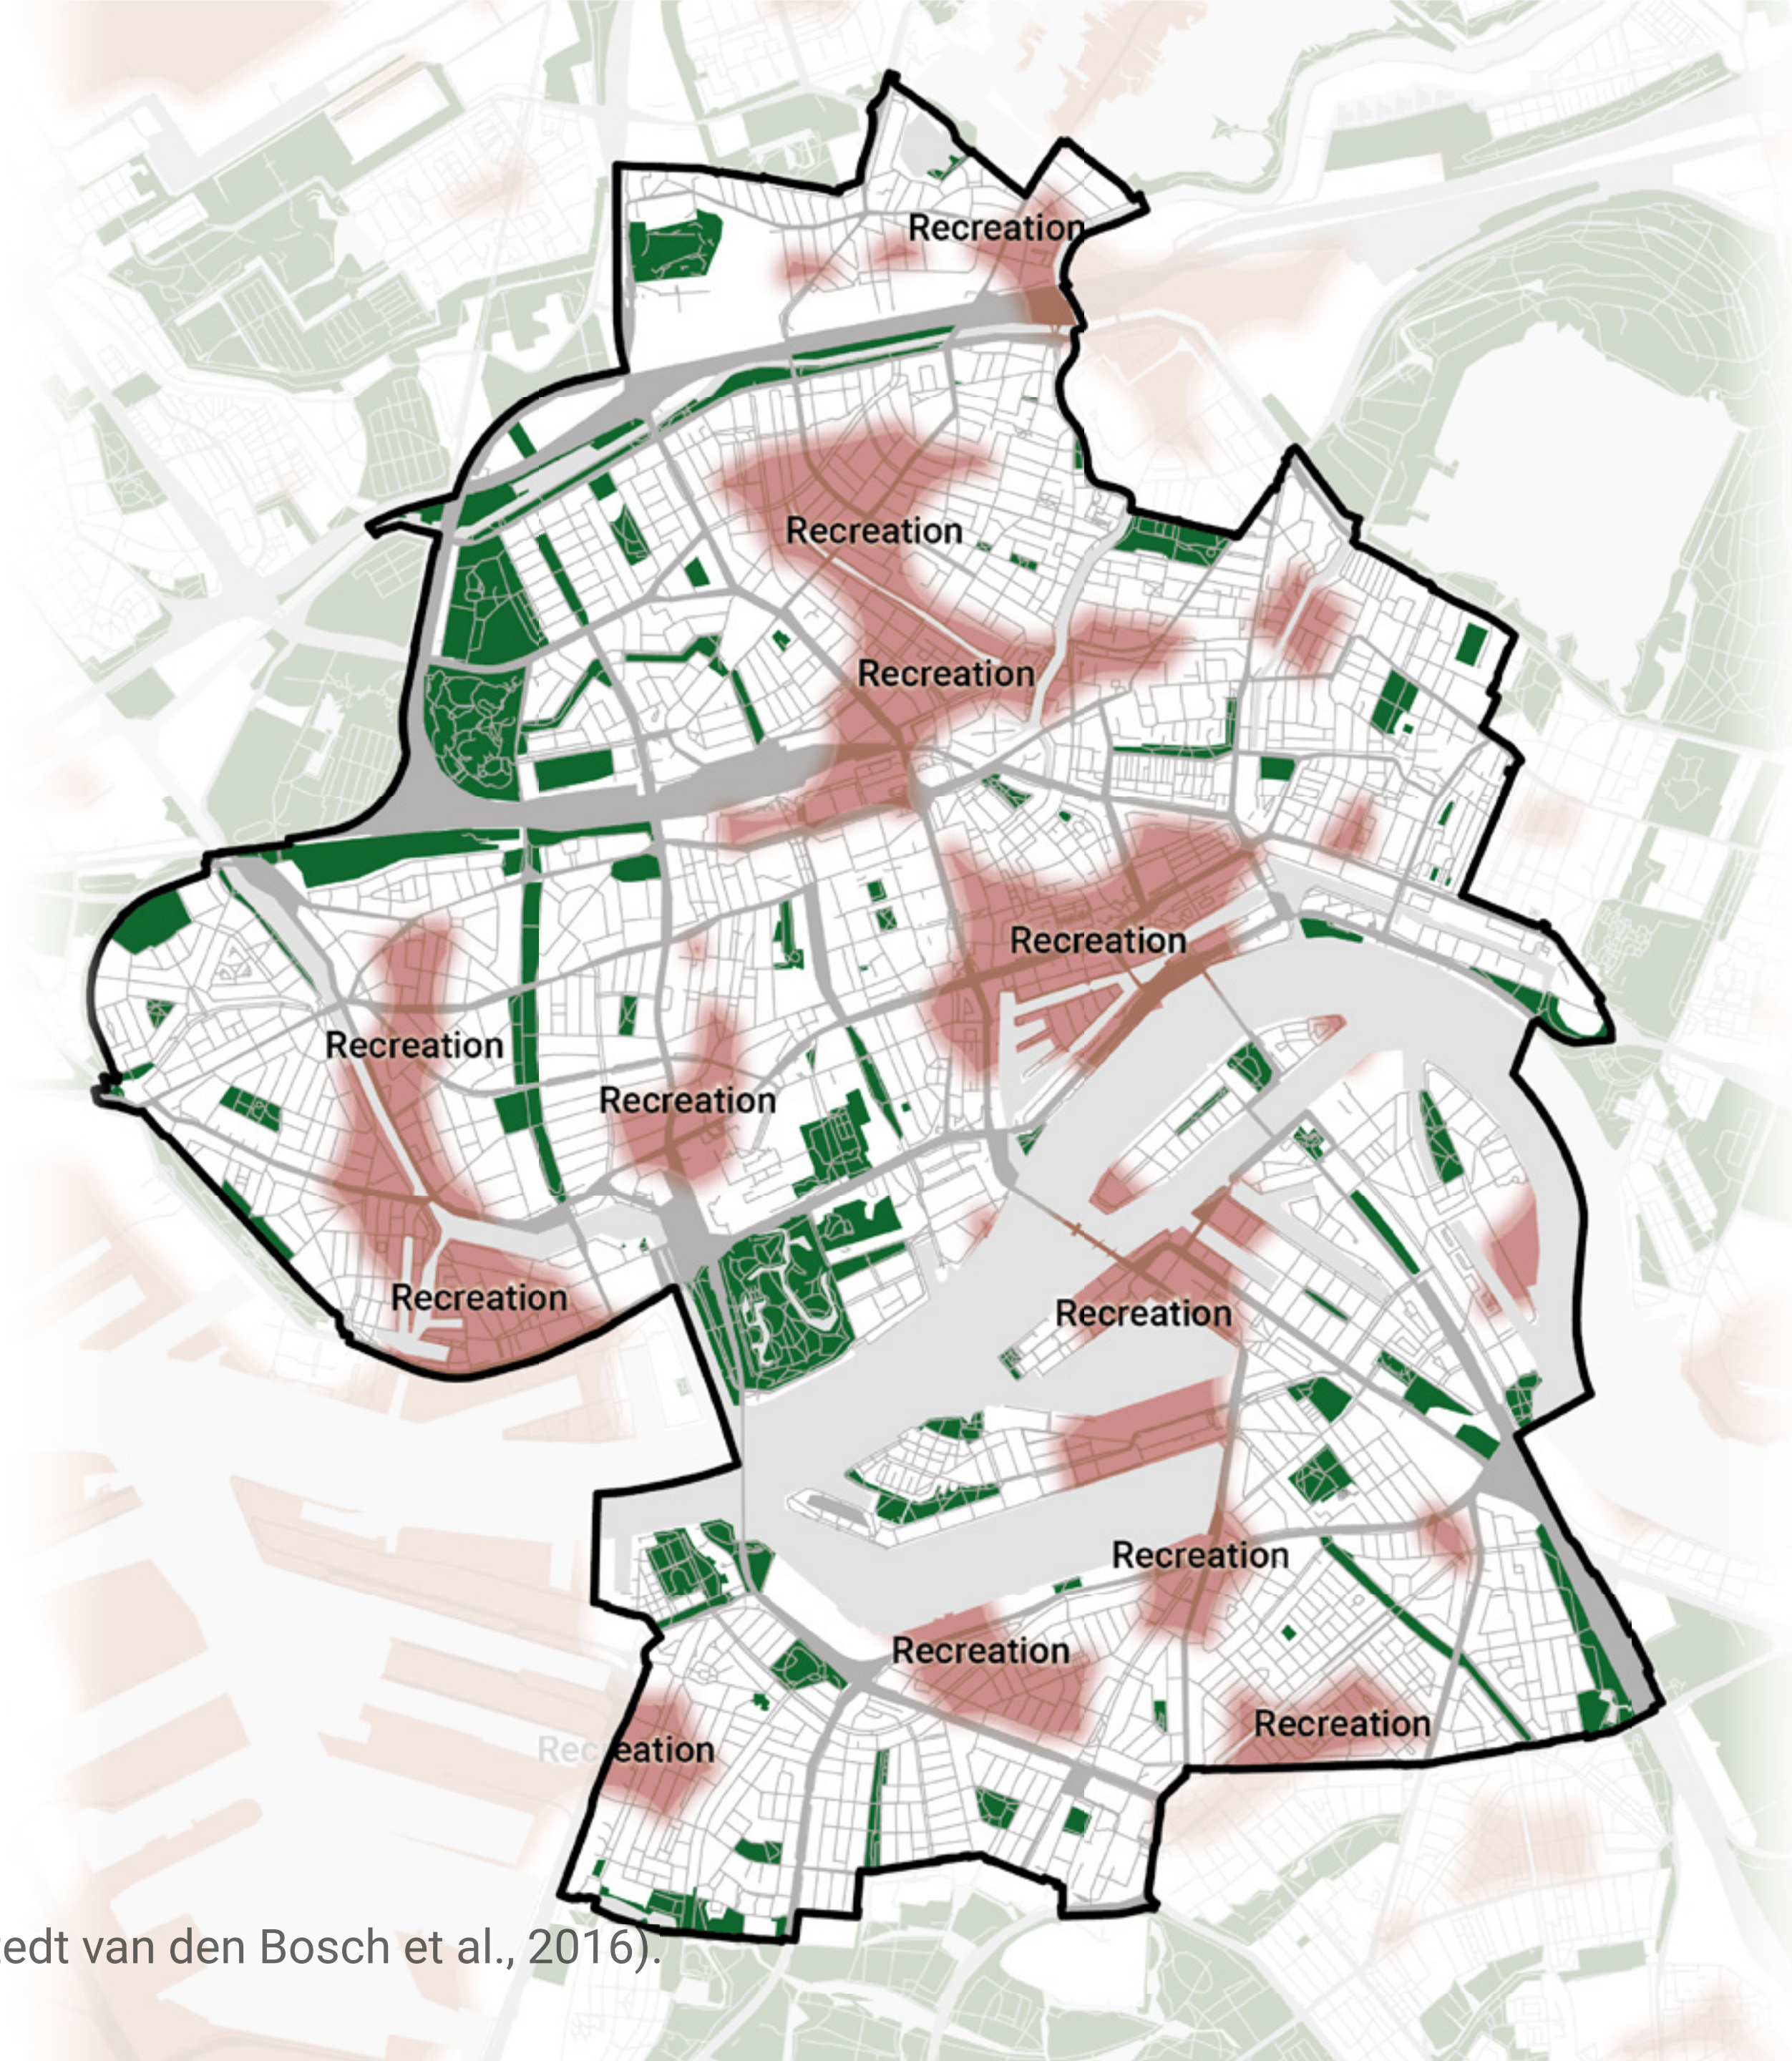

-  Poor walkability
-  Ecosystem service that could potentially be provided by CUGS

Social development

“[...] a 300 m maximum linear distance to the boundary of urban green spaces of a minimum size of 1 hectare are recommended [...]”
(WHO, 2016. p. 159).

 Ecosystem service that could potentially be provided by CUGS

Belonging

*"[Community-driven greenery] provides immediate opportunities for interactions between humans and nature."
(Oh et al., 2018)*

 Ecosystem service that could potentially be provided by CUGS

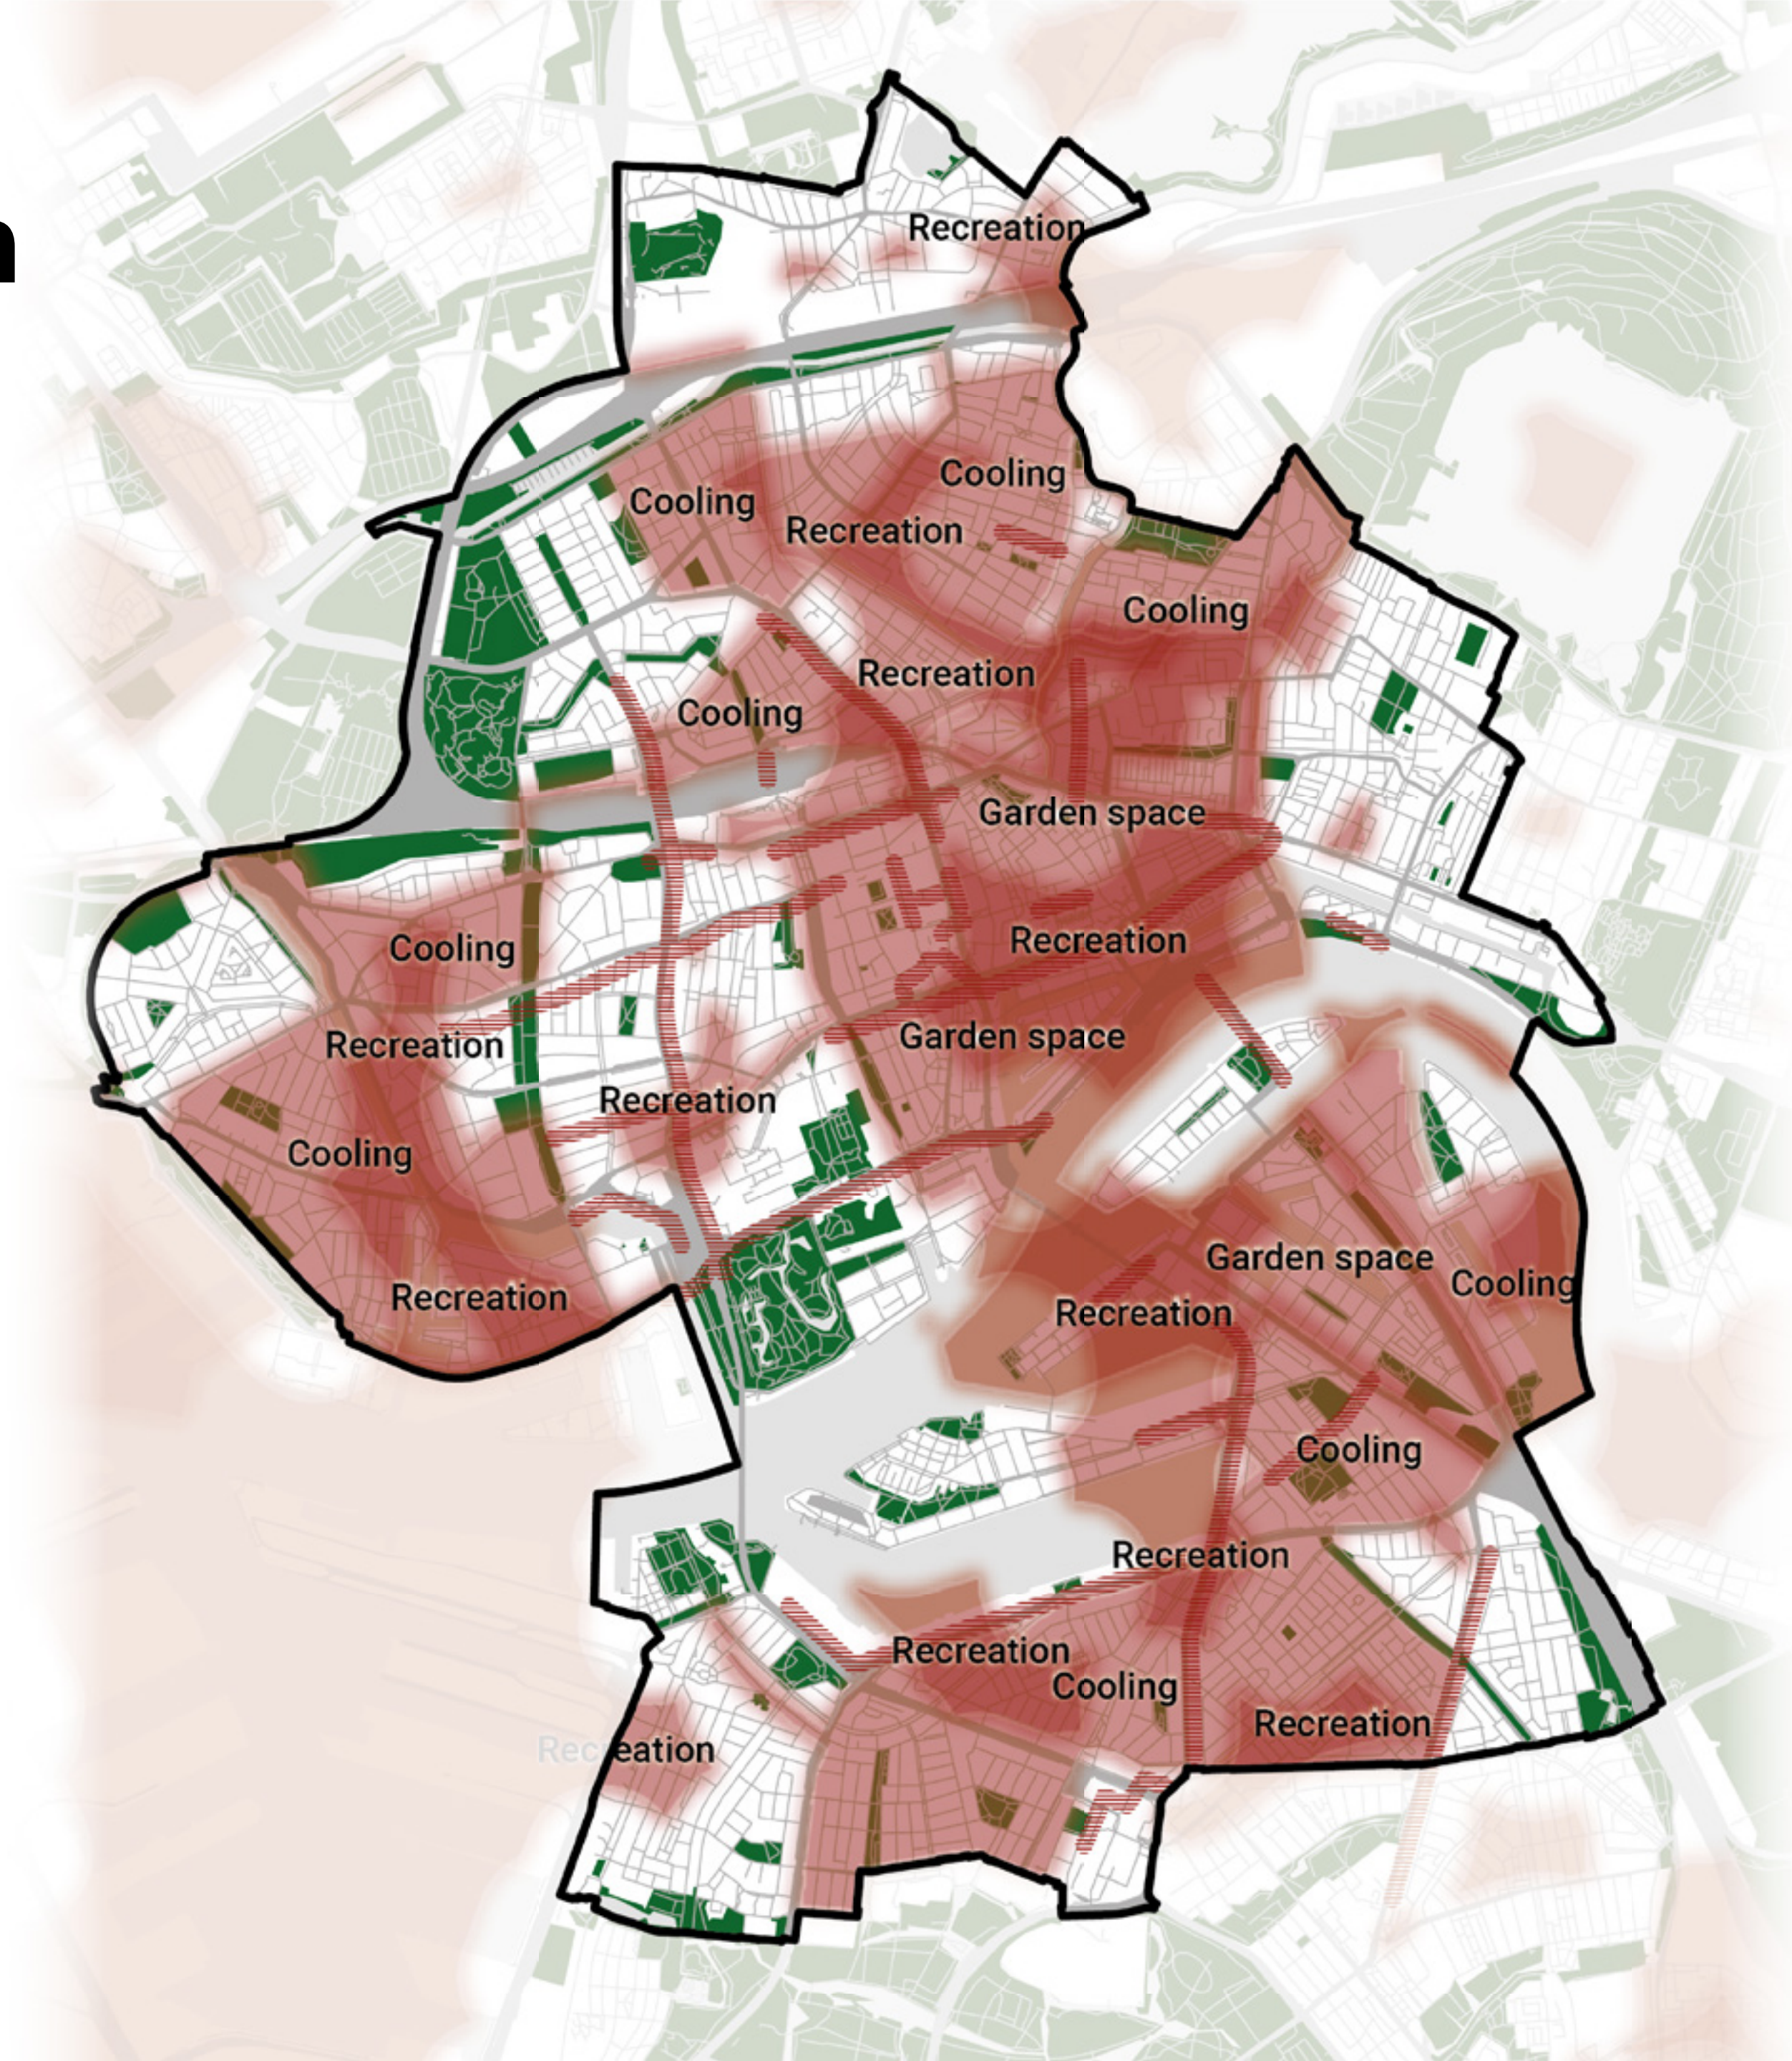

Required ecosystem services

Cumulative lacking ecosystem services

 Poor walkability

Aa Ecosystem service that could potentially be provided by CUGS

Compact urban green space can improve **well-being** in Rotterdam by:

- Addressing health by **reducing heat stress** and **enhancing walkability**

- Addressing social development by **increasing accessibility** and **providing amenities**

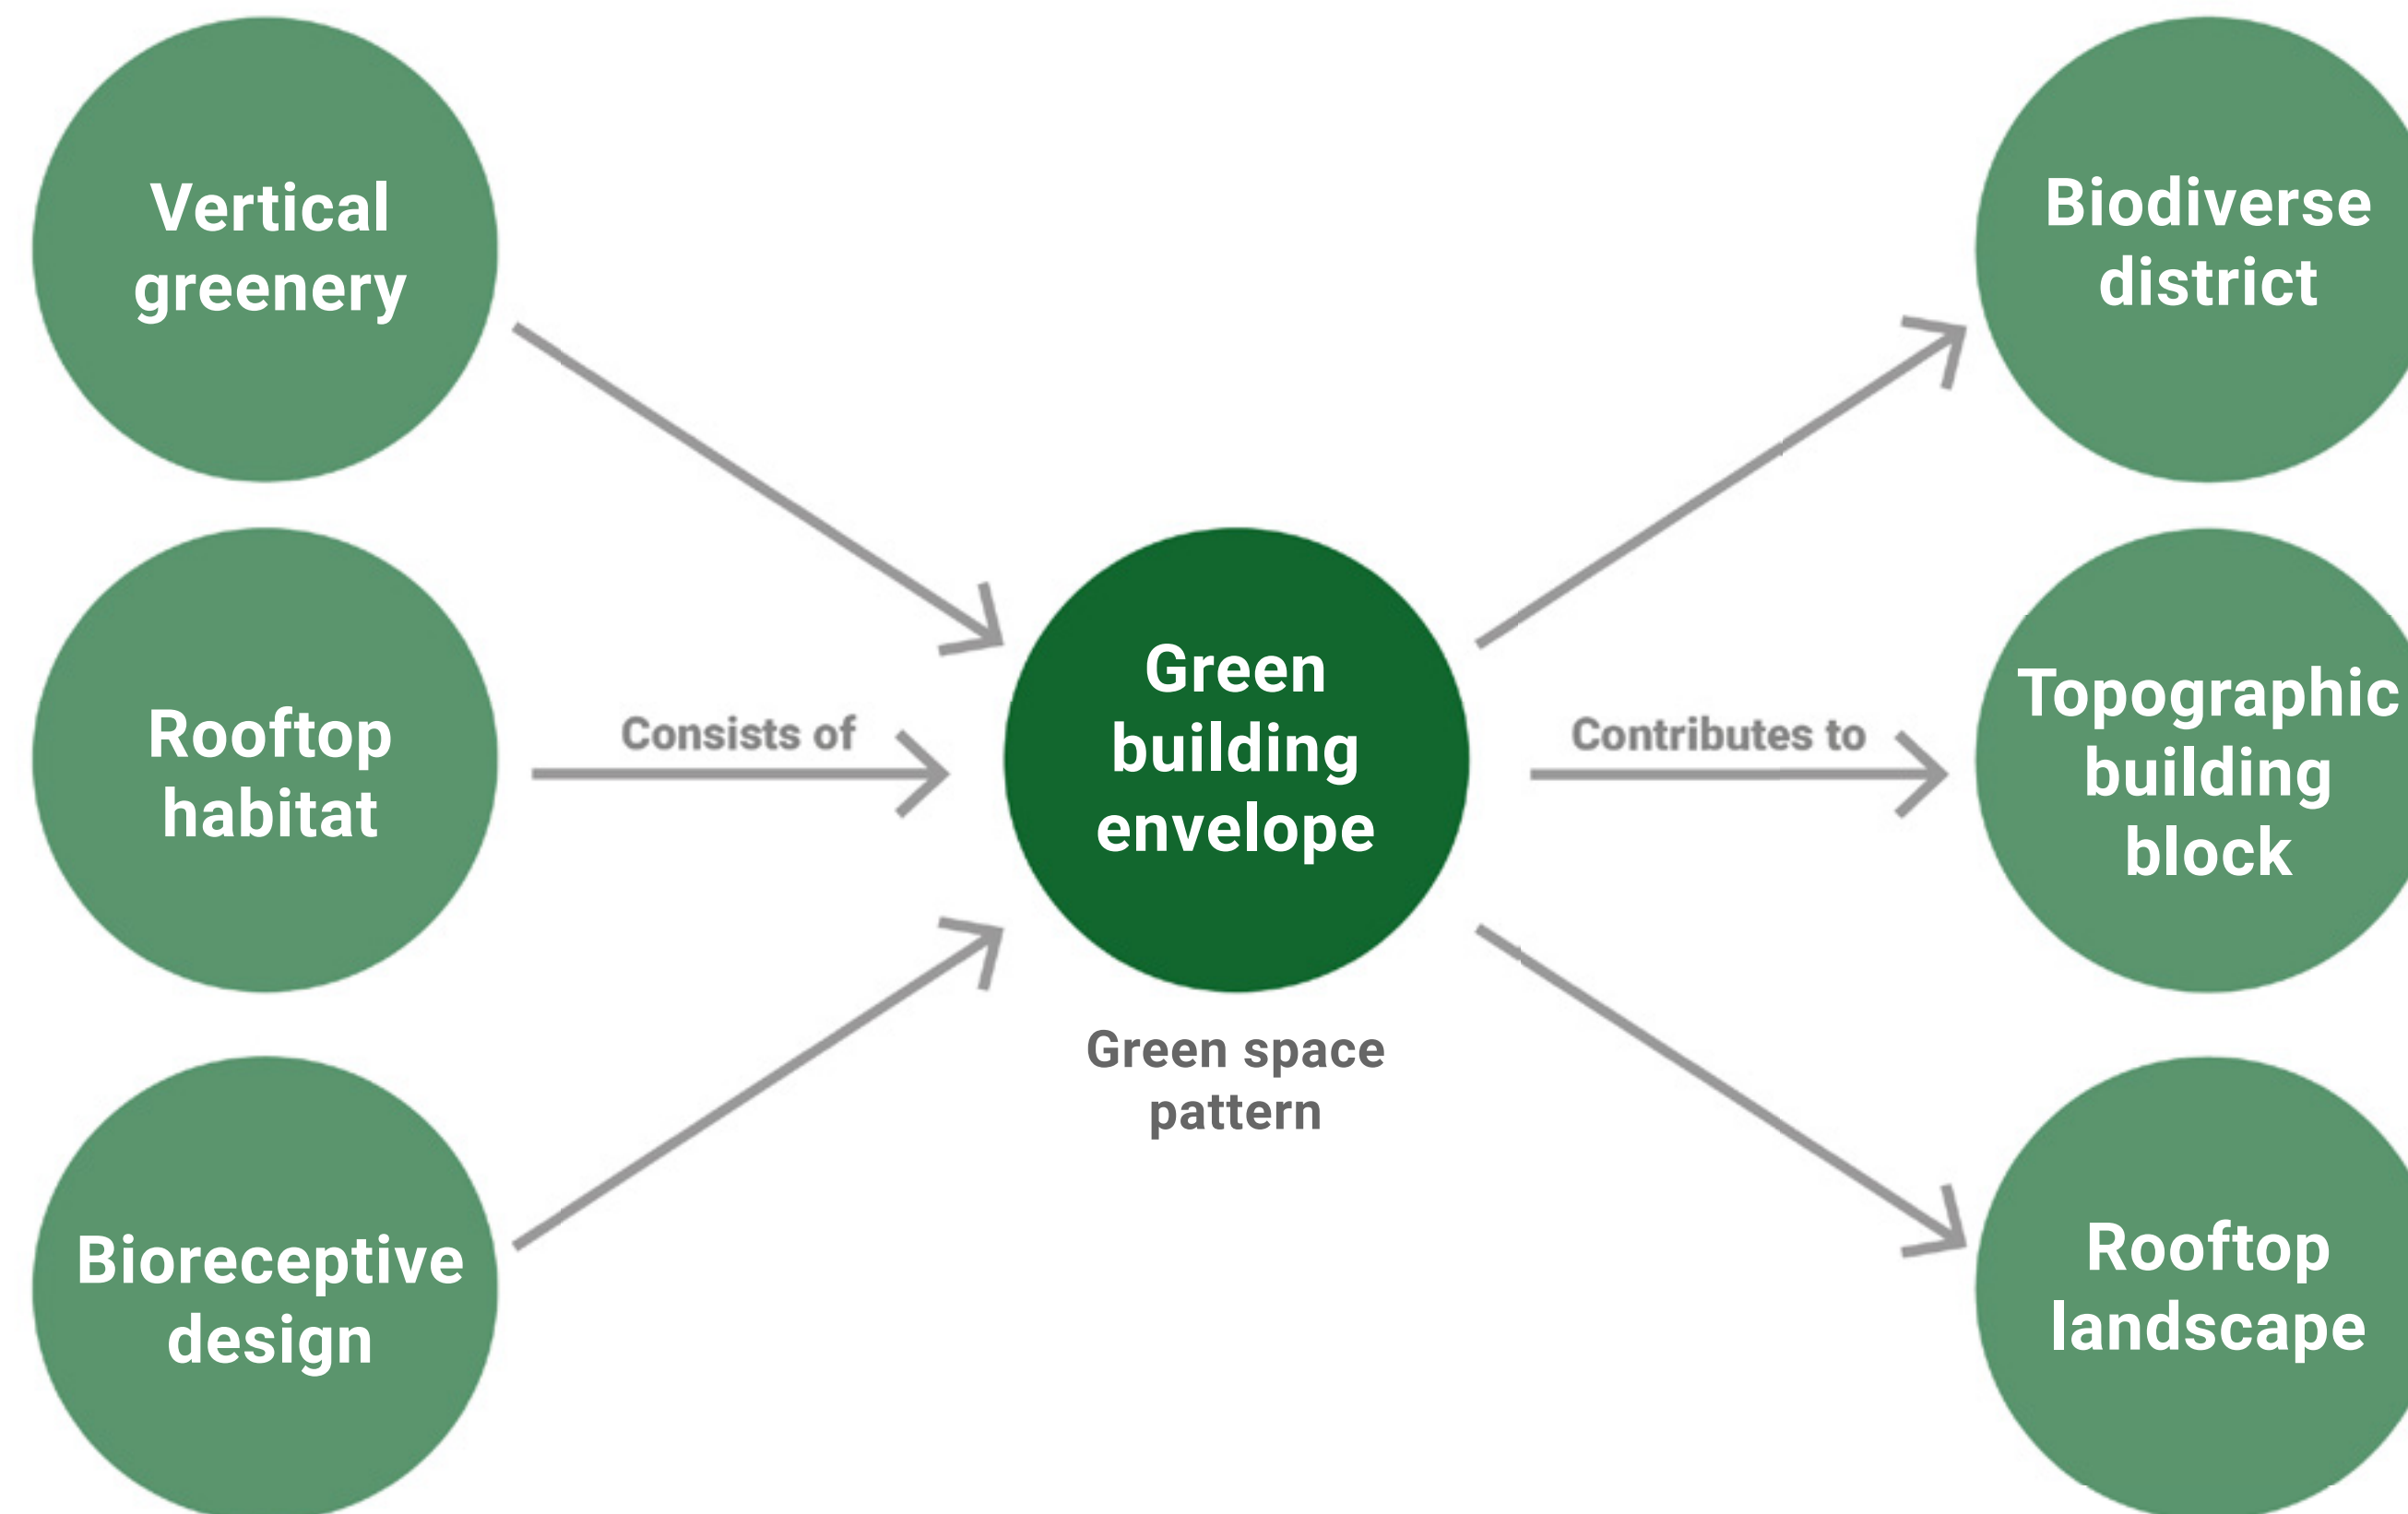

- Addressing belonging by **inviting citizen engagement** and **community stewardship**

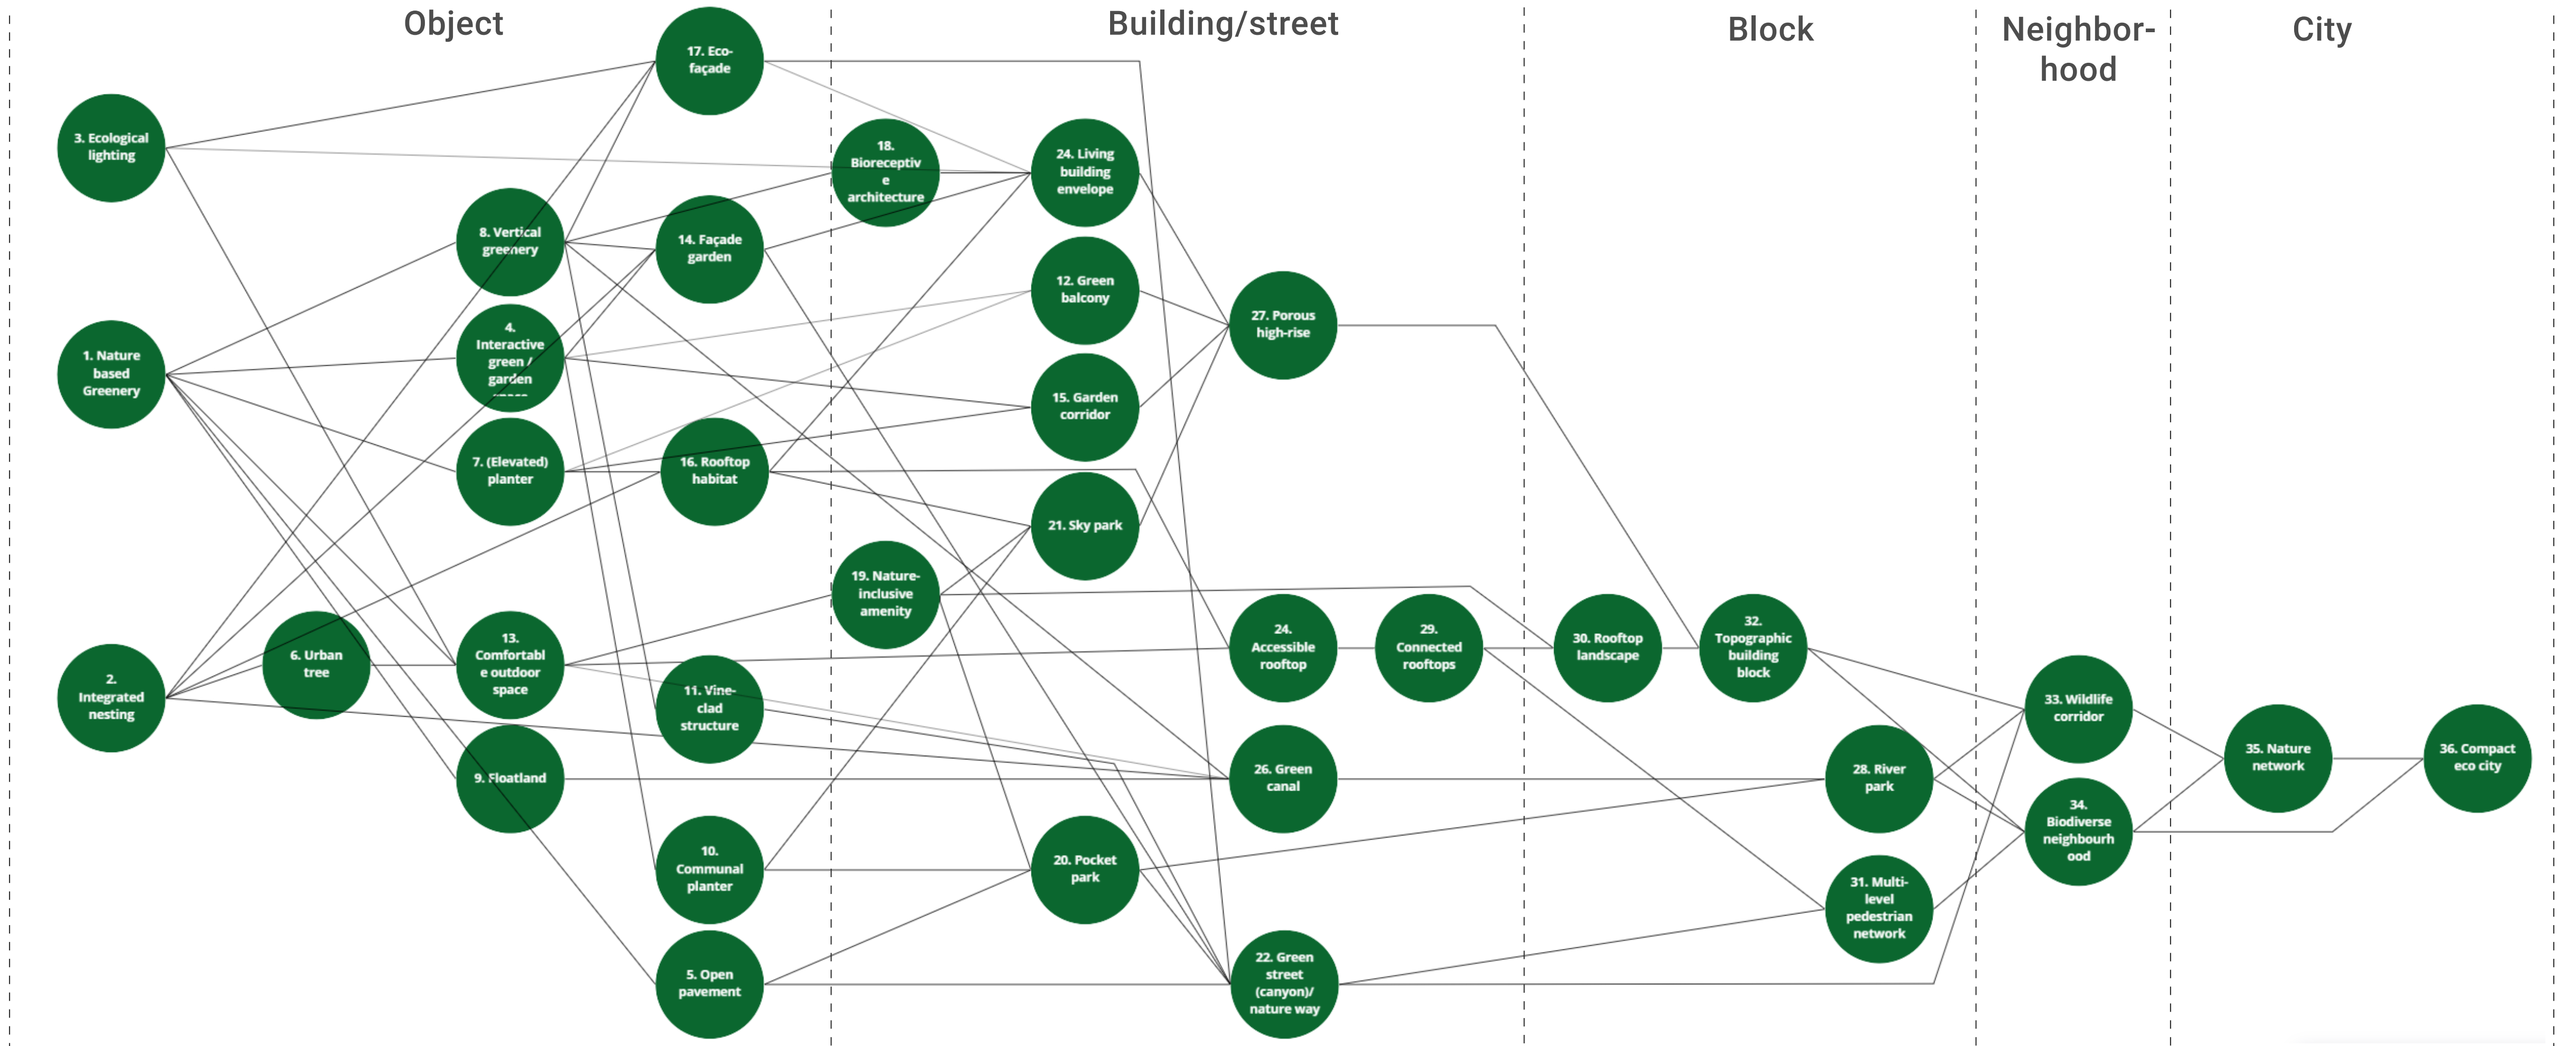

A large, light green number '3' is positioned on the left side of the slide, serving as a background element for the text.

“Which **compact urban green space patterns** contribute to ecological resilience and well-being?”

Which compact urban green space patterns contribute to ecological resilience and well-being?”

4. Open pavement

Paved surfaces reduce the availability of habitats for urban wildlife, contribute to the urban heat island effect, increase noise pollution and disrupt the natural water cycle. Open pavement is an inexpensive solution that mitigates these effects.

The openings between the stones allow vegetation to grow and increase the soil quality, while maintaining walkability and accessibility. Plants produce seeds and attract insects, a food source for various other animals^[1,2]. Since open pavement can be hard to traverse for less mobile users as elderly, it is important that alternative pathways are provided. Ideal locations to apply this pavement type are low traffic areas, such as parking lots and tram lanes.

The **house sparrow** (*Passer domesticus*) greatly profits from the spontaneous growth of native flora^[1]

Open pavement encourages spontaneous growth

The openness of the pavement corresponds to traffic intensity, with low intensity routes having a higher open-paved ratio.

A proper walkable path should always be provided

A seed mix of local species can be used to speed-up vegetation development

Open pavement contains 1. Greenery	Open pavement is embedded in 19. Pocket park 21. Green street

Compact urban green space patterns that contribute to ecological resilience and well-being:

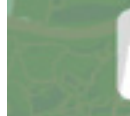

- Offer value at different scales, by including smaller patterns and contributing to larger patterns
- Are fundamentally integrated into urban and architectural design

“What **spatial vision and strategy** could be used to guide the development of the compact urban green space patterns in Rotterdam?”

Framework for Rotterdam

1. An ecological network connects and creates high biodiversity areas

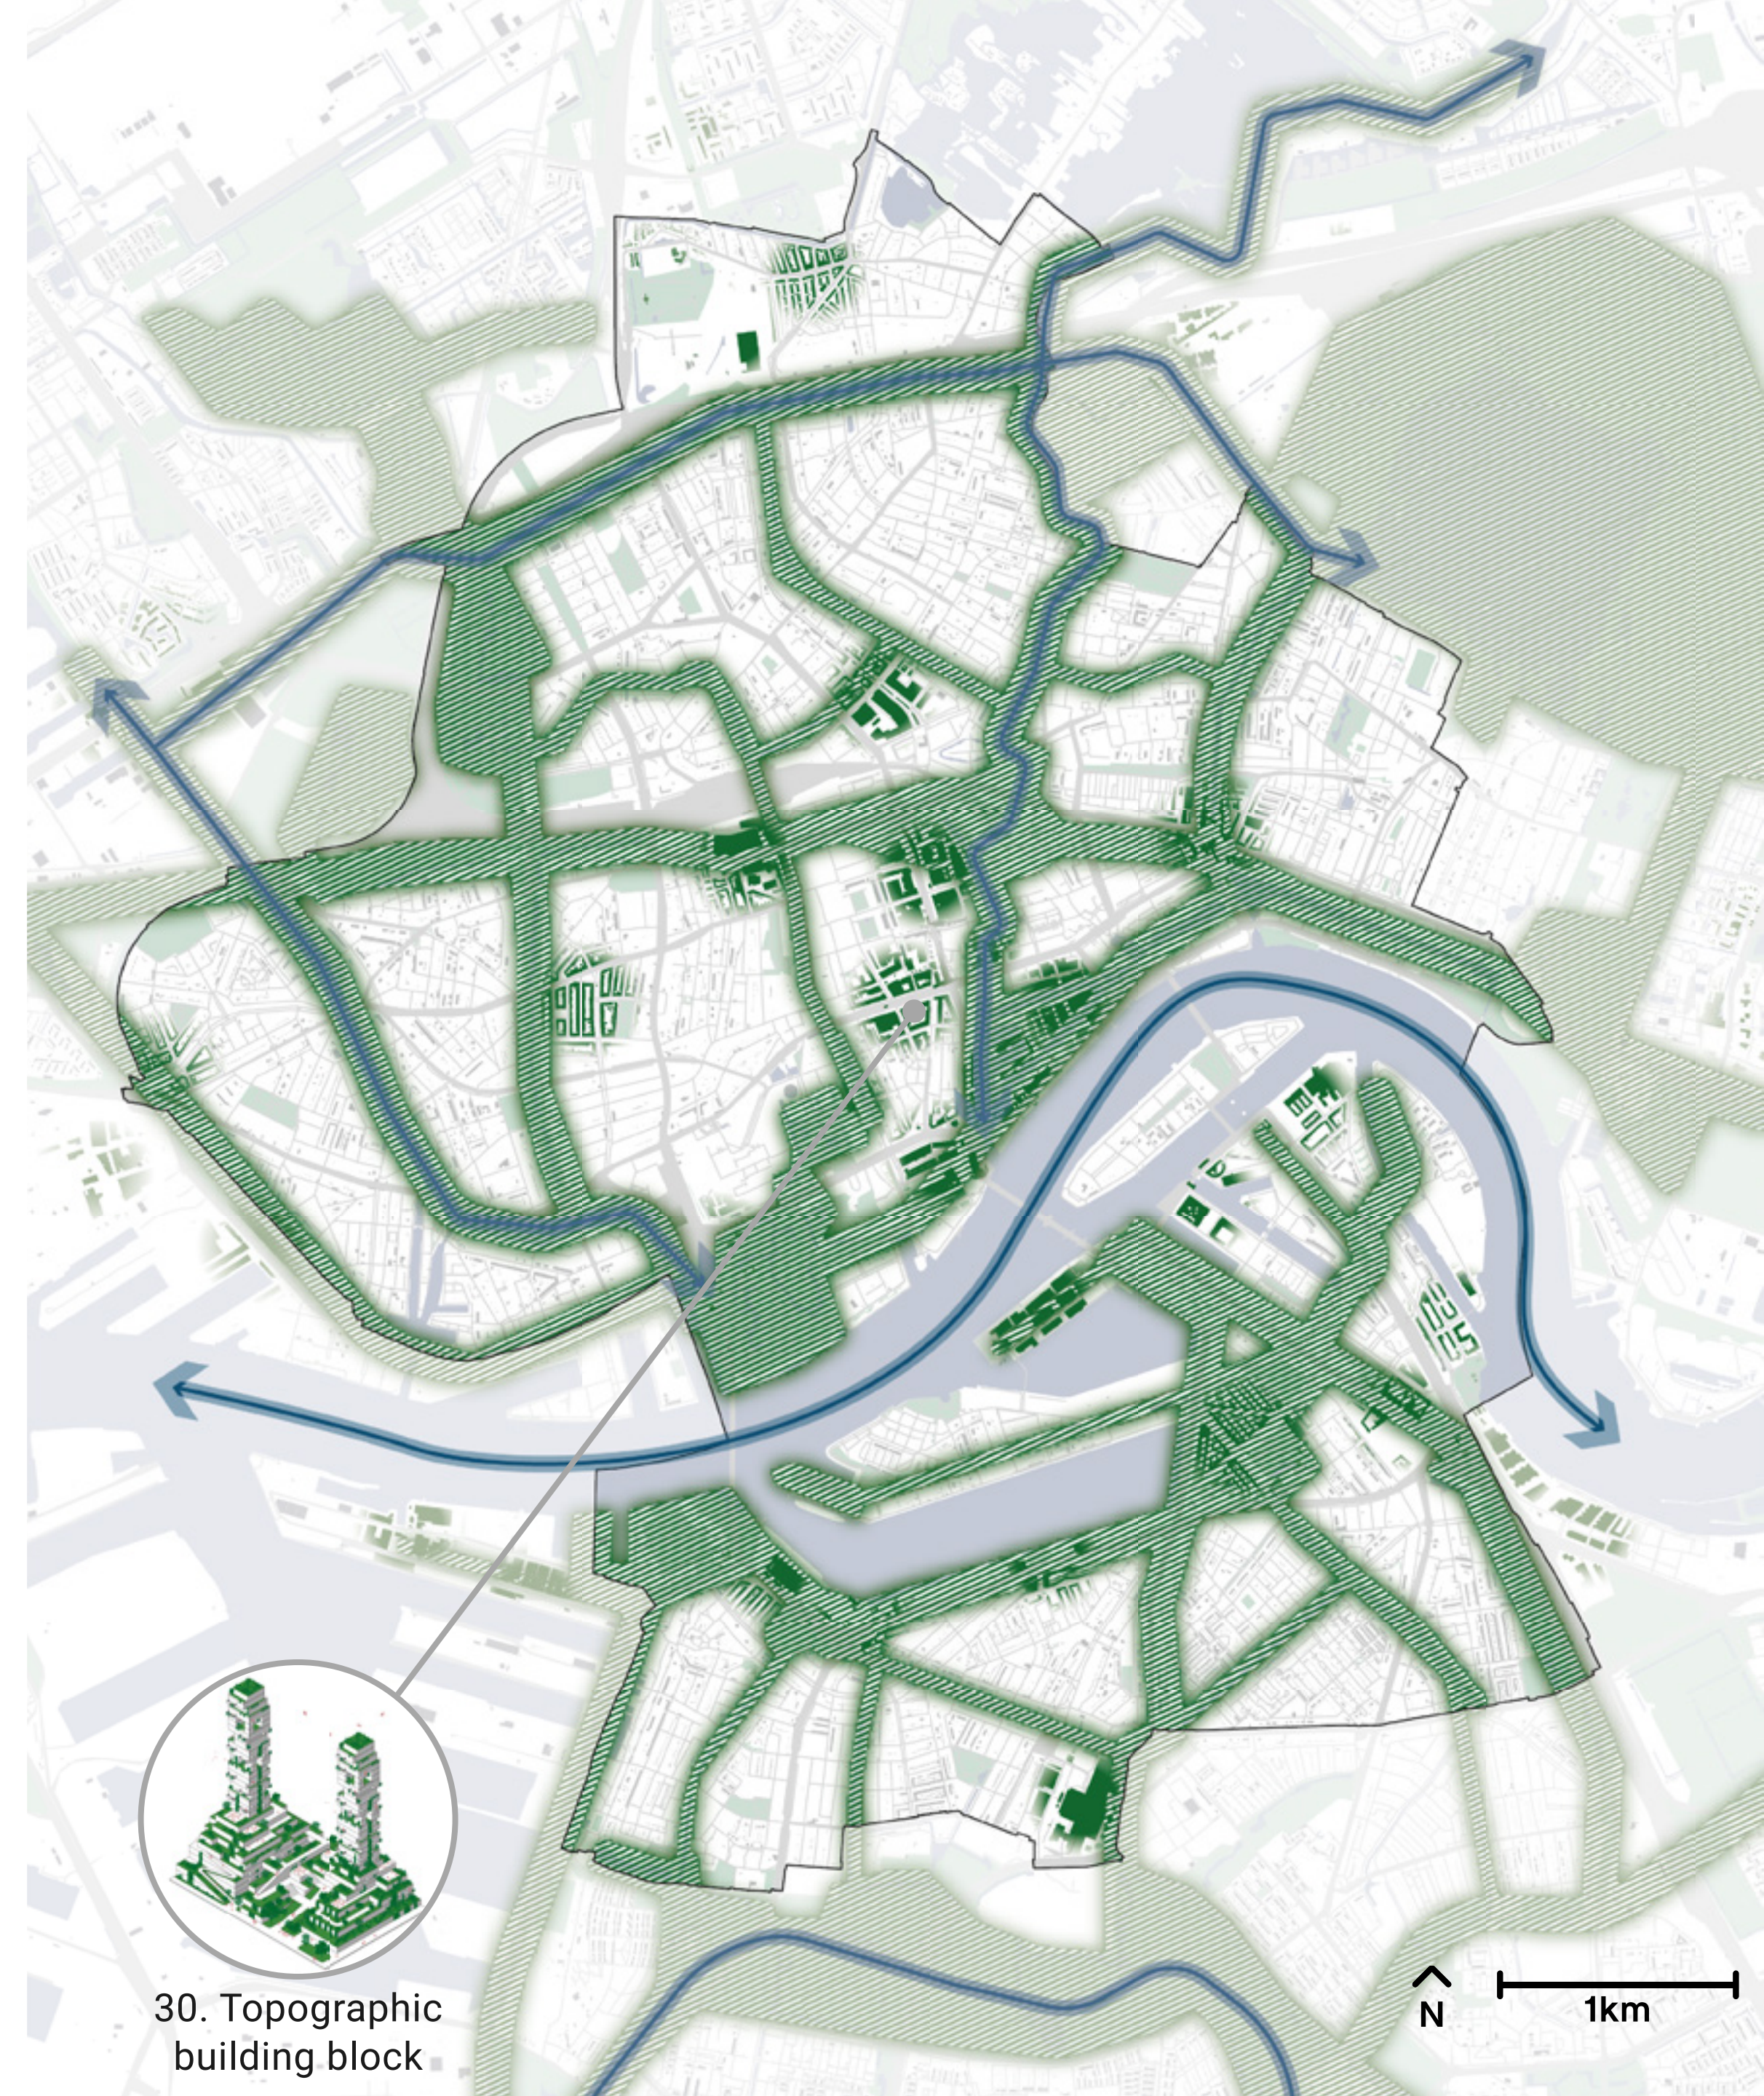

-  Existing ecological corridor and high biodiversity areas
-  Existing natural structure
-  Main proposed corridors
-  Ecological network
-  Ecological improvement of current green spaces

Framework for Rotterdam

1. An ecological network connects and creates high biodiversity areas
2. Densification projects serve as green injections for the neighbourhood

 Green densification location

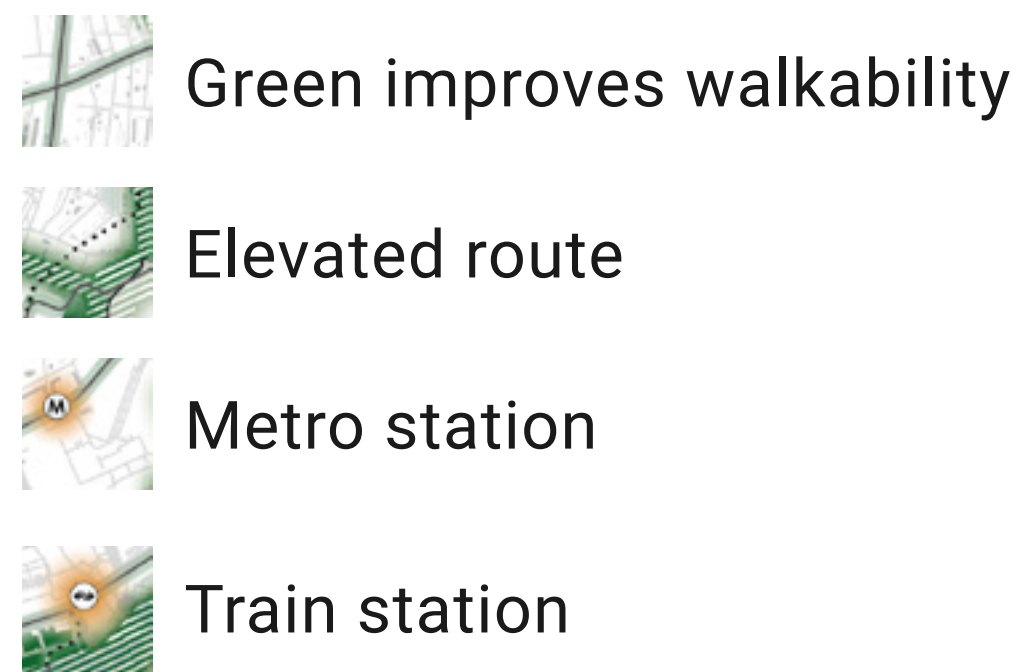

Framework for Rotterdam

1. An ecological network connects and creates high biodiversity areas
2. Densification projects serve as green injections for the neighbourhood
3. New parks make innovative use of under-used spaces

Framework for Rotterdam

1. An ecological network connects and creates high biodiversity areas
2. Densification projects serve as green injections for the neighbourhood
3. New parks make innovative use of under-used spaces
4. Pedestrian networks connect parks with public transportation and improve walkability

29. Multi-level pedestrian network

Framework for Rotterdam

1. An ecological network connects and creates high biodiversity areas
2. Densification projects serve as green injections for the neighbourhood
3. New parks make innovative use of under-used spaces
4. Pedestrian networks connect parks with public transportation and improve walkability
5. Invite community to be stewards of greenery and bring green space close to home

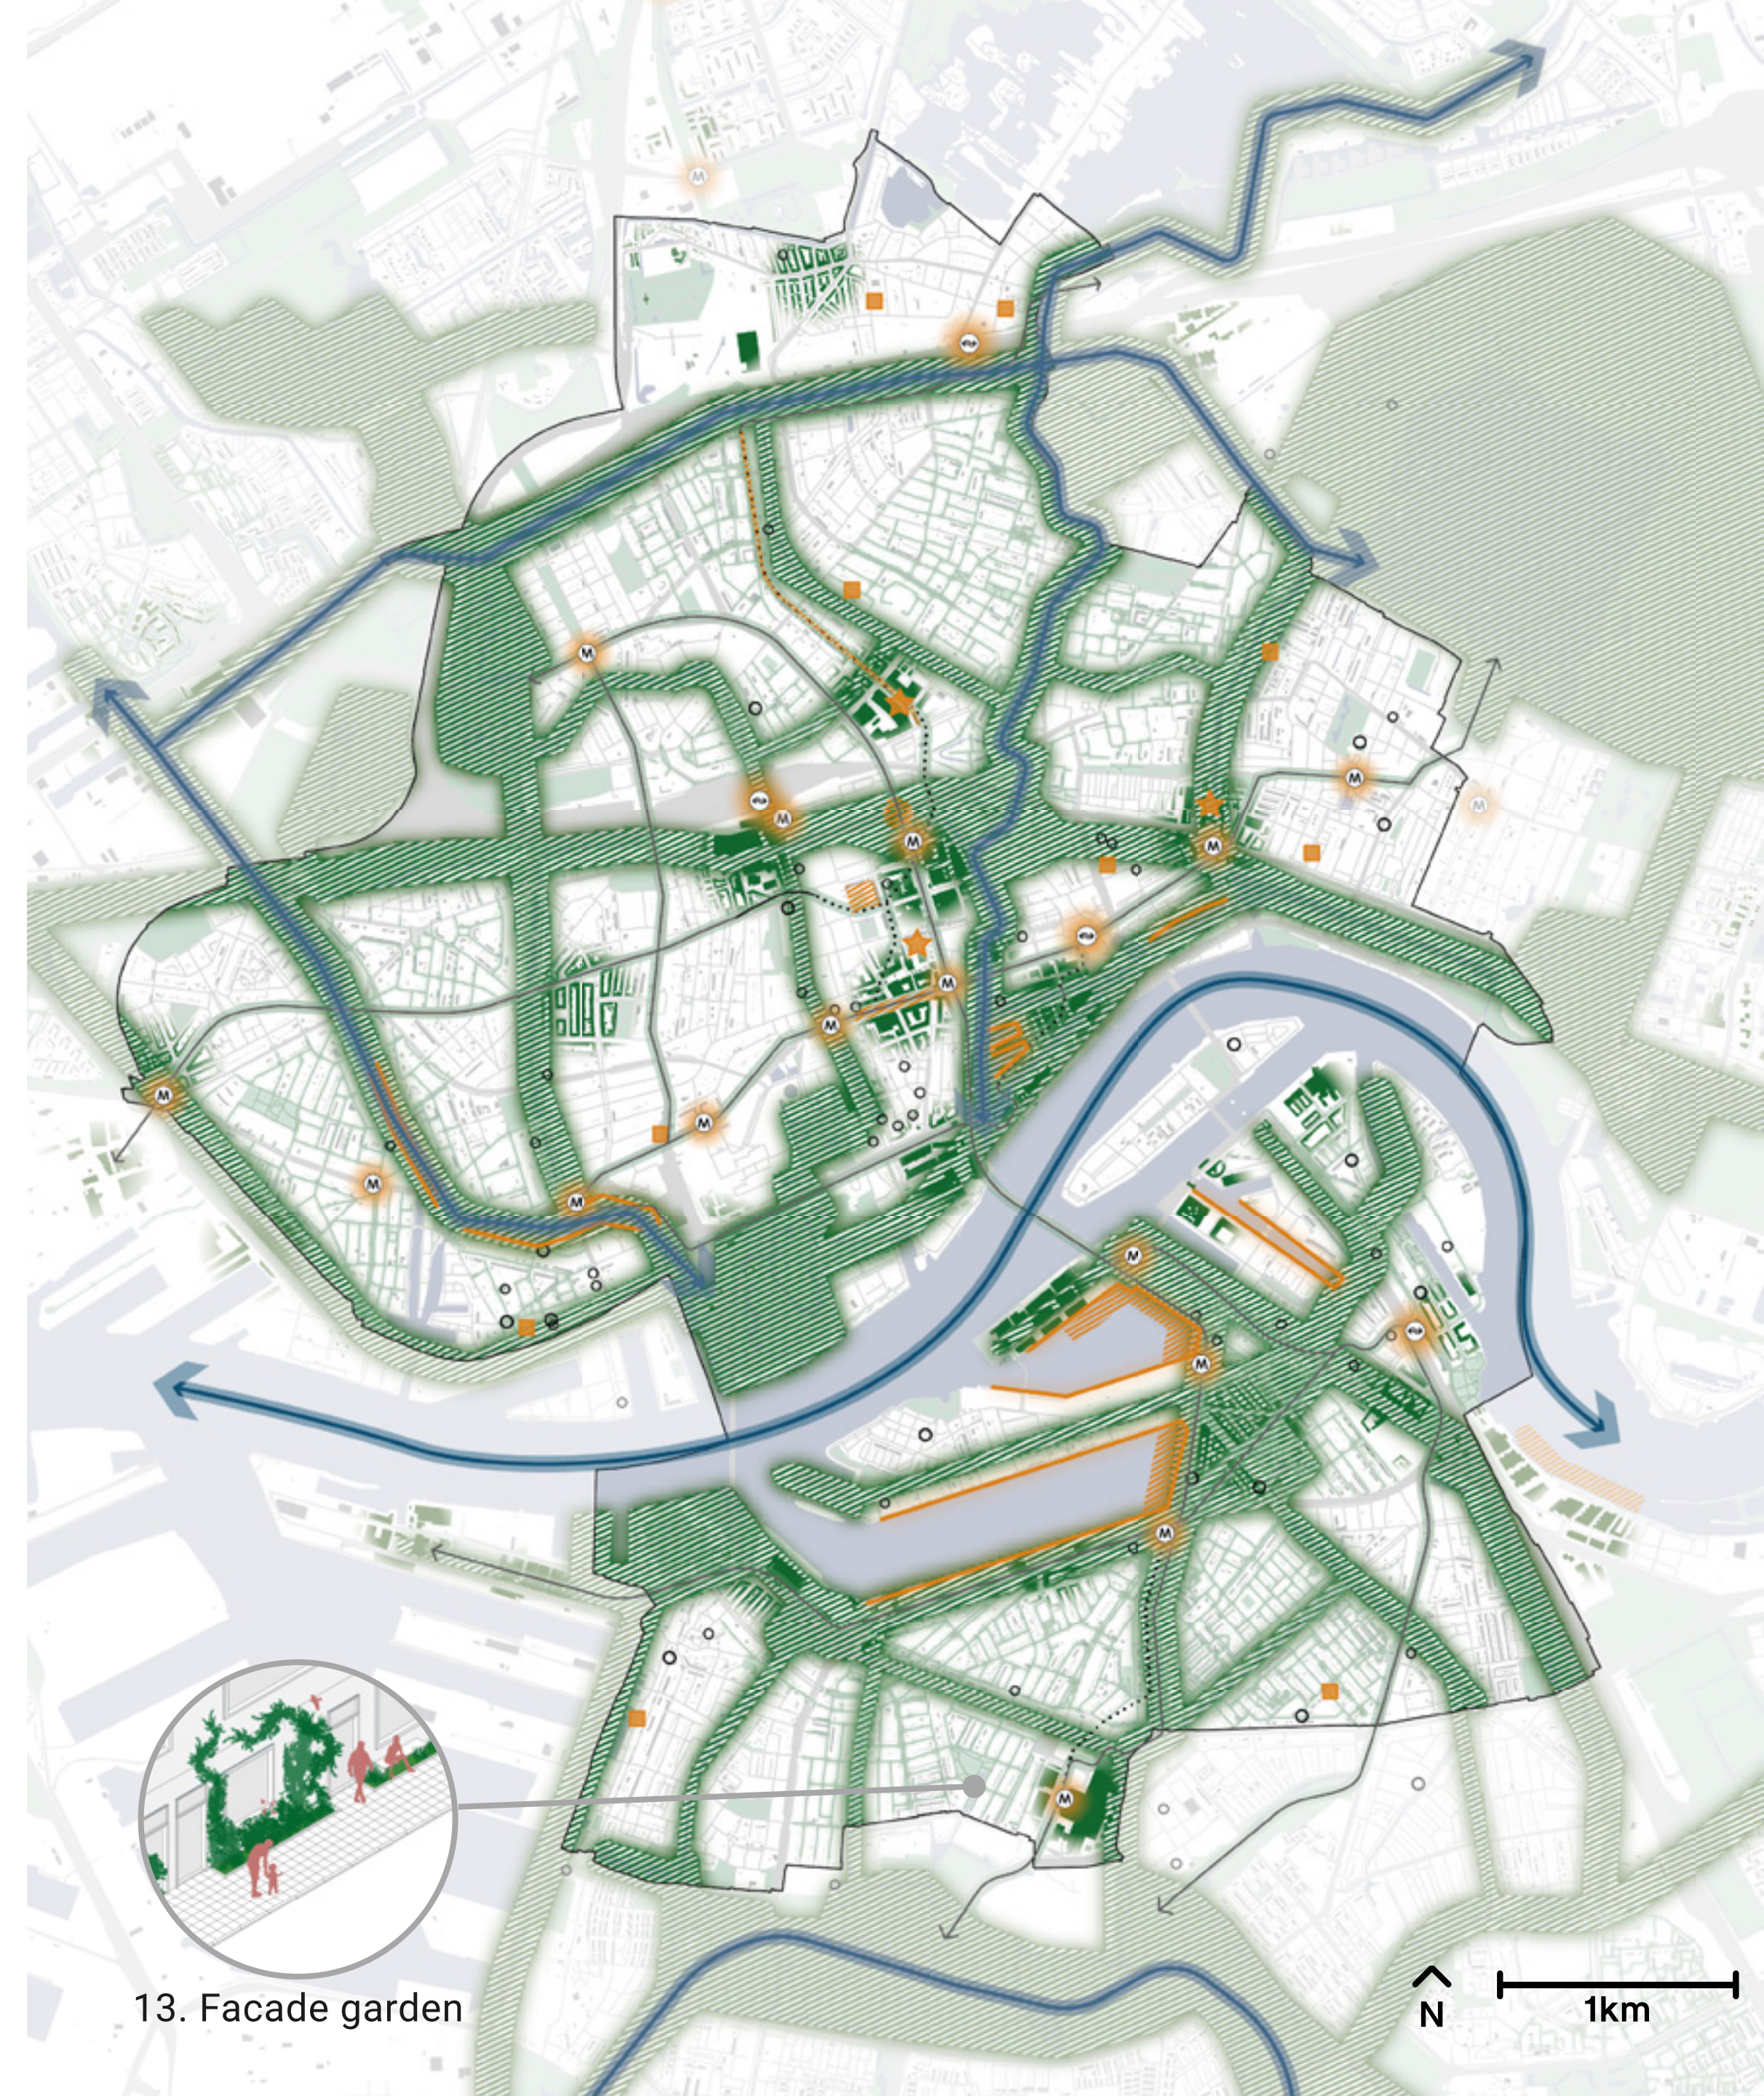

Local projects encourage green streets

Activation of flat rooftops

Green plot ratio adapted from Urban Redevelopment Authority, Singapore

Implications

Wijnhaven Eiland

- Green network (existing)
- Natural feature (existing)
- Primary connection (new)
- Primary network (new)
- Secondary network (new)
- Buildings are part of network
- Challenges**
- Complex spatial structure
- Many actors involved
- Opportunities**
- Large rooftop clusters
- Redevelopment plans
- Located close to high biodiversity zone

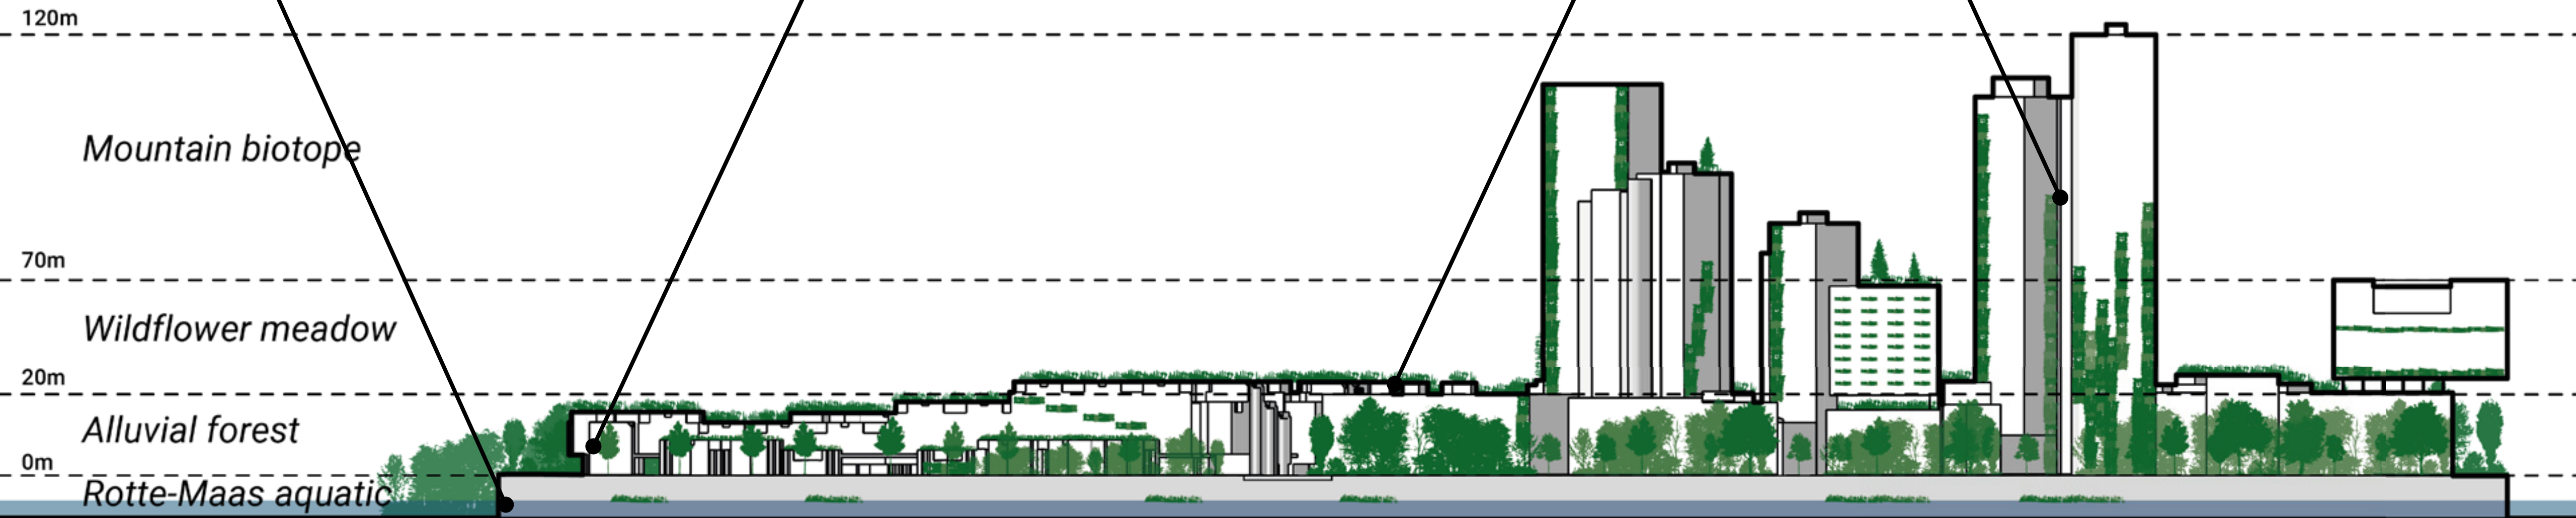

Wijnhaven Eiland

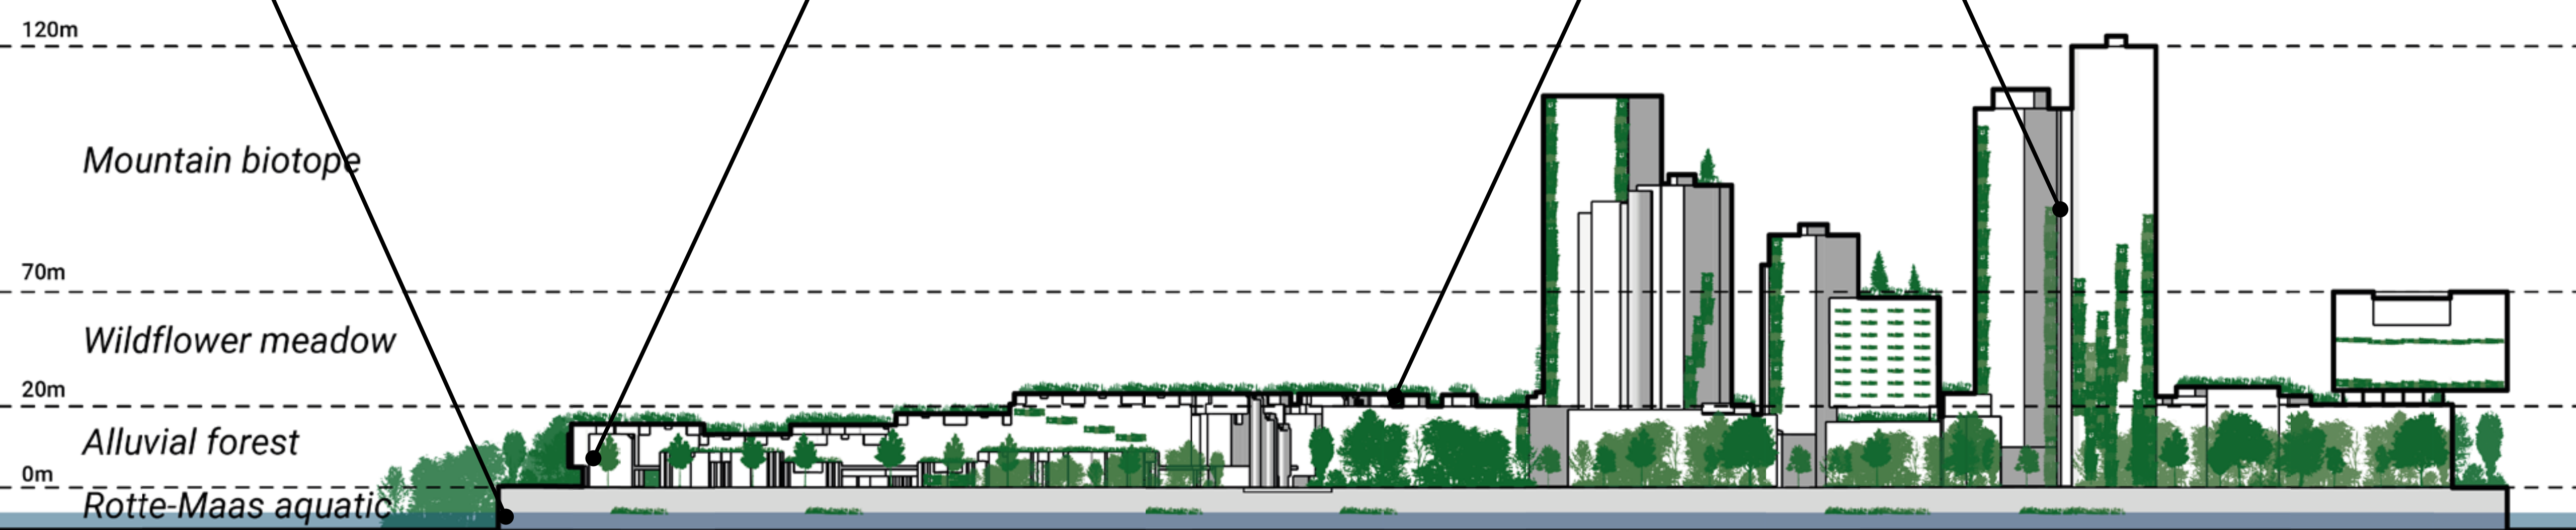

Biodiverse neighborhood: district as a park

Biotores

Biotores

*"During my lunch break
I take a rest on my
balcony. I like to draw the
people and animals I can
see from here."*

A **spatial vision and strategy** that guides the development of the compact urban green space patterns in Rotterdam:

- Is connected to existing spatial qualities
- Includes a combination of patterns suitable for renovation projects and patterns that require new development
- Is not a blueprint but consists of tools to foster cooperation between governmental, private and civil organizations

A **framework** that guides the development of **compact urban green space** in Rotterdam which addresses both the quality, in terms of **well-being** and **ecology** as well as the **spatial-ecological structure**:

- Is formed by the combination of conceptual patterns and a spatial structure and strategy.
- Provides space for bottom-up processes that address the uncontrollable aspects of well-being and ecology.
- Consists of proper spatial design and management (from an anthropocentric point of view) to achieve spatial quality and limit the negative effects of ecological resilience.

Design conclusions: Compact Urban Green Space should:

...be fundamentally integrated into building architecture

... provide accessible outdoor space even in tall buildings

... provide habitats compatible with existing environmental characteristics

...encourage green initiatives by the local community

...add value at different scales

...connect to public space at the ground level.

Let's take green space to the next level!
