# IN-SITU SLUM REDEVELOPMENT

## CURRENT MANAGERIAL SCHEME

# IN-SITU SLUM REDEVELOPMENT

## MANAGERIAL CASE STUDY - MARKANDEYA SLUM REDEVELOPMENT (1980s)

## MANAGERIAL CASE STUDY

Case study: Markandeya, Dharavi slum redevelopment project by SPARC

In one of Dharavi slum redevelopment project, SPARC, the NGO, responded with a new housing typology by adding 9 sq.m loft within the 16.7 sq.m unit.

The loft idea was based on the existing housing in Markandeya and the proposition made by a group of pavement dwellers working with SPARC

This type of unit are then used for multiple purposes including living and working.

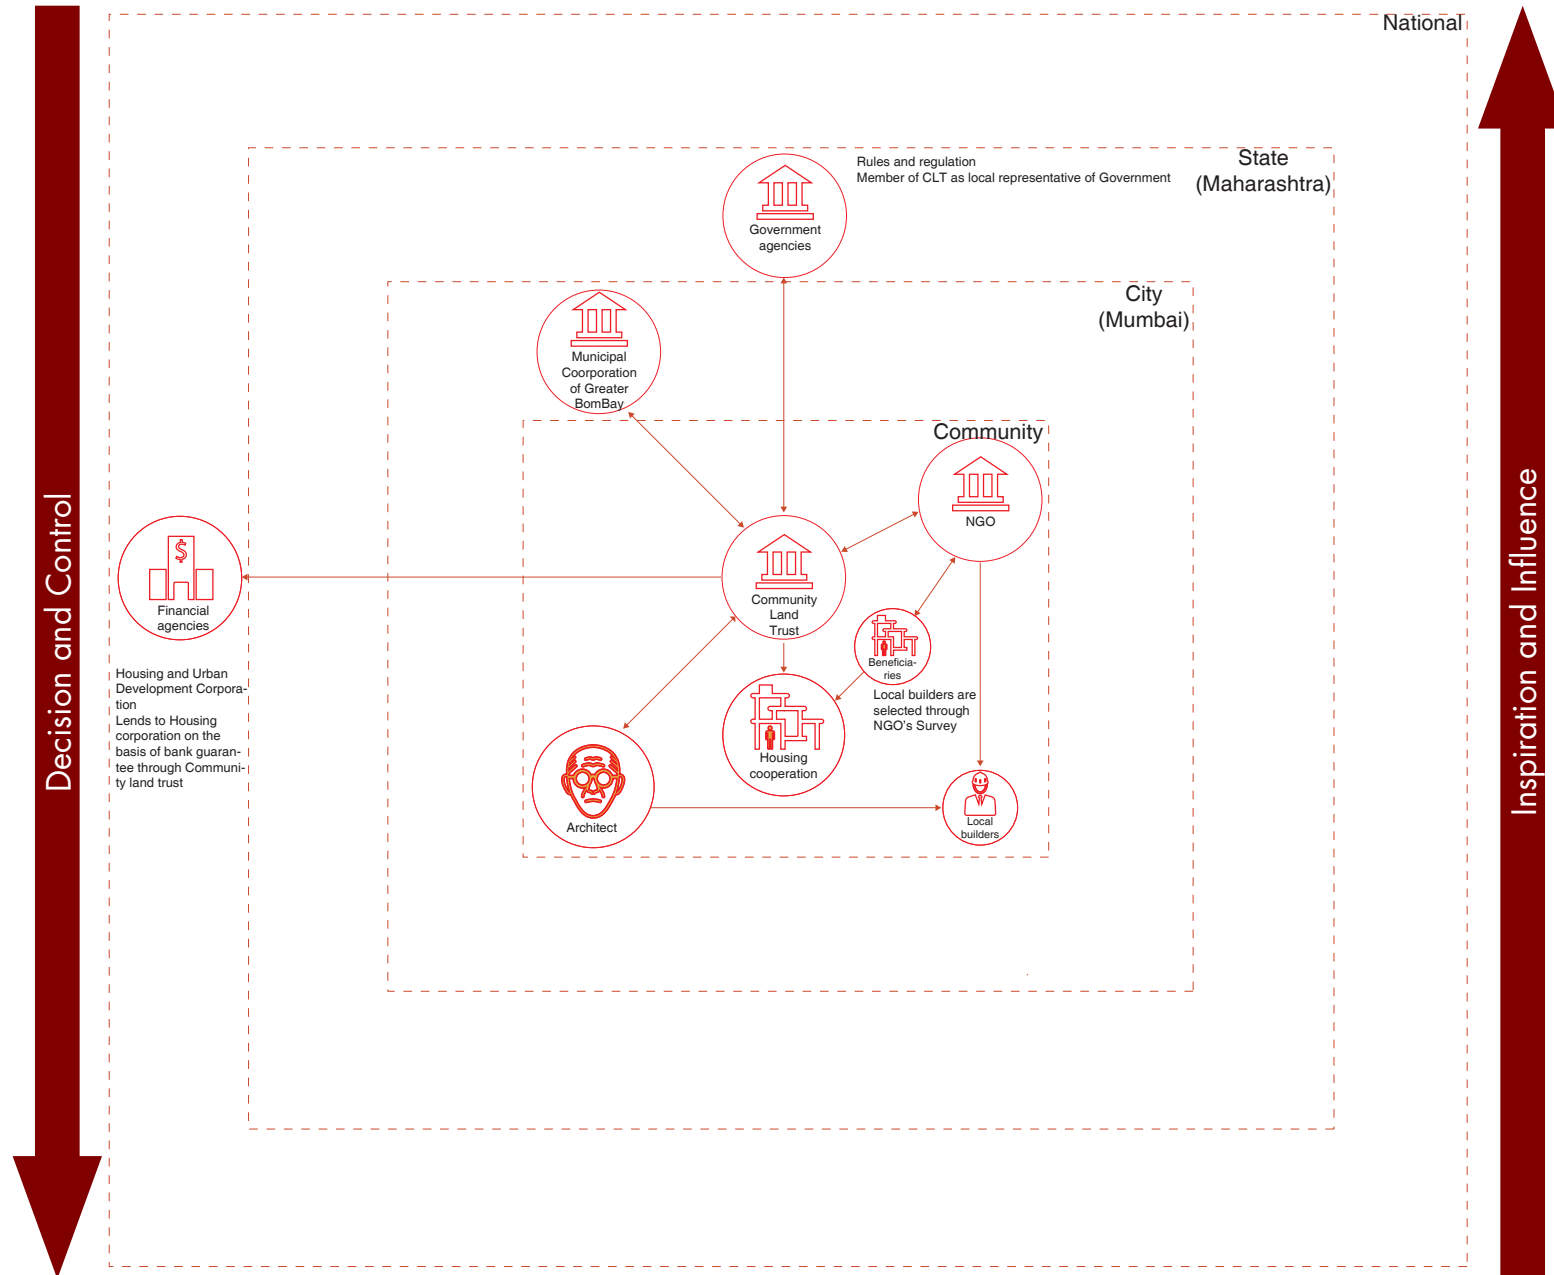

Unit 1 : 26sq.m

Unit 2 : 16.7sq.m

# IN-SITU SLUM REDEVELOPMENT

## PROPOSED PARTICIPATORY MANAGERIAL SCHEME

# RESEARCH

## DENSITY

FSI allowed in Mumbai according to The Mumbai Development Plan 2034

	FSI
Mumbai Island City	1.33
Mumbai Suburbs	2.5
Redevelopment scheme	4

$$\text{FSI} = \frac{\text{Floor space covered in all floors}}{\text{Area of the plot}}$$

### FSI in Nala Sopara East

Baithi Chawls

FSI = 0.6, 1-2 Floors

Load Bearing Apartments

FSI = 3-4, 5 Floors

CIDCO housing Apartments

FSI = 2-2.5, 4-5 Floors

# RESEARCH

## DENSITY

What is the appropriate density for the development of affordable housing?

**CIDCO apartments**  
(3-6 levels)  
227 Units/ Hectare  
1137 People/ Hectare

PK Das Suggestion  
for Mixed-use development  
400-550 Units/ Ha  
2000-2500 People/ Ha  
FSI=3  
15% amenities  
35% Open Spaces

**Sangharsh Nagar**  
(8 levels)  
540 Units/ Ha  
2700 People/ Ha

**Load bearing apartments**  
(4-5 levels)  
837 Units/ Ha  
4185 People/ Ha

Optimum Density  
suggested by  
Charles Correa

50-200 Units/ Hectare  
250-1000 People/Ha

Road = at least 25% of  
land use

**Charkop**  
(1-2 levels)  
167 Units/ Ha  
833 People/ Ha

**Baithi chawls**  
(1-2 levels)  
335 Units/ Ha  
1675 People/ Ha

### Density Aimed:

FSI = 2.0 - 2.5  
Density = 400 - 550 Units/  
Hectare  
Floors = 4 - 8

# RESEARCH

## THEORETICAL RESEARCH

What kind of **mixed-use scheme that is appropriate for EWS and LIG** to enhance their productivity and affordability?

The most low-income urban housing in India has been provided by so-called **informal sector, which characterized by:**

**decentralization and fragmentation,  
flexibility and  
by the small scale of its entrepreneurial activities.**

“Space takes precedence over permanence”

# RESEARCH

## THEORETICAL RESEARCH & PATTERNS OF INHABITATION

What kind of **mixed-use scheme** that is appropriate for EWS and LIG to enhance their productivity and affordability?

Intimate working and living

Intimate production and consumption

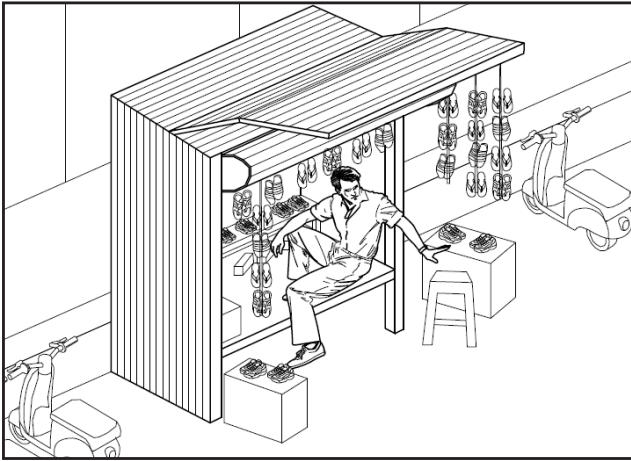

Decentralized Industry

Unlike conventional housing, the housing of the poor almost always **combines living and working activities.**

# RESEARCH

## THEORETICAL RESEARCH & PATTERNS OF INHABITATION

What kind of **mixed-use scheme** that is appropriate for **EWS and LIG** to enhance their productivity and affordability?

Licensed Location

Hawkers on the move

Informal corner

**"The workplace is often mobile**, moving easily in and out of the house, and not requiring a fixed enclosure. **In most cases the workplace was either directly on the street or immediately in front of the house**, in what we have called house-extensions."

These patterns of inhabitation call attention to **the importance of streets, walkways as not just circulation spaces, and socializing spaces, but also as work spaces.**

Bhatt, Vikram, Witold Rybczynski, Mohammad Alghamdi, Ali Bahammam, Marcia Niskier, Bhushan Pathare, Amirali Pirani, Rajinder Puri, Nitin Rajee, and Patrick Reid. "How The Other Half Builds." Vol. Vol1: Spac. Montreal, 1984. Pg. 21

# THEORETICAL RESEARCH

## CLUSTER CONFIGURATION

How could the alternative in-situ redevelopment scheme **enhance socio-economic network?**

Baithi chawls

Focus on the centre  
Neglected back alley  
Neglecting edges

Load bearing apartment  
(Current in-situ redevelopment approach)

Focus on the centre  
Neglected back alley  
Neglecting edges

CIDCO housings and Cooperative apartments

Focus the centre  
Gated edges

The building setback reducing the global F.S.I and make the building go higher (Charles Correa speech at CTBUH 2010)

Proposed scheme

Face on both sides of a building  
No back and front  
No neglected alley  
Connected open spaces

Utilizing edges as places for economic activities and building network with neighborhood

“When **people imagine where the life of a community** is to be found, they usually look for it **in the centre**, where planners try to intensify community life. **This means neglecting the edge**; the community turns inward as a result. **Which is an error.**”

# DESIGN HYPOTHESIS

## BUILDING INTERACTION

Community street with mobile commercial activities

Commercial belt

Amenities (openspace or multi-function building)

### Interaction of one building with surrounding

The building is proposed to be an urban element which has face on both sides and complemented with community street for social, working, and mobile commercial activities.

# DESIGN HYPOTHESIS

## CLUSTER INTERACTION

Community street with mobile commercial activities

Commercial belt

Amenities (openspace or multi-function building)

### Interaction within one cluster with surrounding

“Had we located the market on that street, we might have encourage activity which brought the rich and the poor into some daily commercial, physical contact.”

# DESIGN HYPOTHESIS

## INTERACTION OF CLUSTERS WITH SURROUNDING

Community street with mobile commercial activities

Commercial belt

Amenities (openspace or multi-function building)

### Interaction of clusters with surrounding

“Wiser planners ... have sought to locate new community resources at the edges between communities in order to make a porous edge, to open the gates between different racial and economic communities. Our imagining of the importance of the centre proved isolating; their understanding of the value of the edge and border aims to create neighbours who mix casually.”

## VARIOUS DEVELOPMENTS

### CIDCO housing

Area : 61547 m<sup>2</sup>  
Density : 1137 people/  
hectare

- Expensive commercial units become unused spaces
- Has open space within every housing
- Has collective open space

### Mid-rise chawls

Area : 35845 m<sup>2</sup>  
Density : 4185 people/  
hectare

- Over crowded
- Lack of open space
- Lack of light
- Poorly constructed

### Baithi Chawls

Area : 15467 m<sup>2</sup>  
Density : 1775 people/hectare

- Neighborhood has solid social life
- Hidden/ far from economy activity
- Limited community interaction
- Going to be demolished
- Threatened too be developed as the load bearing model

### Building as Shading Device

The streets are oriented North-South direction, thus they are shaded by the buildings.

# CLUSTERING

## CLIMATE DESIGN

Urban Ventilation Scheme

The prevailing wind direction in Mumbai is mostly from the west. The porosity of the scheme allows wind moves through the building complex.
