RESEARCH QUESTION & FINDINGS

*How can the urban design of public spaces
contribute to the reduction, relief or prevention of
urban stress in metropolitan areas?*

*How can the urban design of public spaces
contribute to the **reduction, relief** or **prevention**
of urban stress in metropolitan areas?*

How can the urban design of **public spaces** contribute to the reduction, relief or prevention of **urban** stress in **metropolitan areas**?

Metropolitan

Urban

Public space

Causes of urban stress

1. Building density

1. Building density

2. Crowding

1. Building density

2. Crowding

3. Boring megascapes

4. Garbage, graffiti and disrepair

1. Building density

2. Crowding

3. Boring megascapes

4. Garbage, graffiti and disrepair

5. Sharp architectural angles

6. Traffic (jams)

7. Parking problems

8. Accessibility & availability of green

9. High-rise

10. Public transport

11. Perception of security

12. Architecture and urban design

13. Housing conditions

14. Accidents

15. Falls

16. Gender inequality

17. Race inequality

18. Sense of security

19. Crime & robbery

20. Lack of social support networks

21. Sunshine hours

22. Air pollution

23. Noise pollution

24. Light pollution

25. Exposure to SO2

26. Exposure to NO2

27. Exposure to radiation

28. Climatic and geophysical hazards

29. Heat

30. Mental health

31. Physical health

32. Exposure to germs

33. Exposure to viruses

34. Exposure to microbes

35. Exposure to bacteria

36. Diet

37. Lack of exercise

38. Obesity

39. Unemployment

40. Debt per capita

41. Social security

5 GUIDELINES TO DESIGN AGAINST URBAN STRESS

Green cities, variety of surroundings, less cars, social interaction and clear designs are 5 guidelines that are created to start designing against urban stress. Each of the guidelines can decrease multiple urban stressors and can thereby contribute to the reduction of urban stress. The guidelines are a result of a year of study into the topic of urban stress, and are a conclusion of research and design. On the next pages, the guidelines are presented in more detail.

INVOLVES STRESSORS:

1. Green cities
Green cities are good cities

2. Variety of surroundings
Outside the city inside the city

5. Clear design
Clear designs are calm designs

3. Less cars
Low traffic, low stress

4. Social interaction
More social, less stress

3 Low traffic, low stress

LESS CARS

A city without cars is impossible these days, but when looking at the stressors and the ways to reduce them, it seems as if a car free city would be a city with far less stress. Not only does traffic and parking in itself cause stress, cars and roads also cause pollution (light, air and noise), they take away open space and space for pedestrians and cyclists, result in less healthy (physical) behaviour and lead to accidents. Since people still have to move around and banning the car from the city is not realistic, it is important to make the city less car dependent. This means investing in an extensive public transit network and good and safe walking and cycling routes, as well as mixed neighbourhoods.

ADDRESS(ES) STRESSORS:

INCLUDES DESIGN CRITERIA:

 <p>Mixed neighbourhoods Create neighbourhoods with facilities within walking distance, so it is more inviting to walk to your destination</p>	 <p>Walking & cycling routes Provide a good walking and cycling network, so that the car is not the only option</p>
 <p>Enough space for pedestrians Create enough space to invite people to walk and to prevent crowding</p>	 <p>Public transport Foresee in a good public transport network as an alternative for car use</p>
 <p>Provide enough options Provide enough options, for example routes, public transport stops, etc., so that people have a choice other than the car</p>	

Provide enough options

Public transport

Mixed neighbourhoods

Enough space for pedestrians

Walking & cycling routes
