

# FORUM ROMANUM IN VARNA

a landscape-based strategy for the  
integration of marginalized Roma  
settlements through a  
sequence of public spaces

> Robin de Louw

Introducing  
^ fascination  
^ the contemporary city dialogue

## Introducing > fascination

“When I was a little boy, I knew I wanted to become an architect.

Not just an architect, but a ‘good’ architect.

I dreamt of designing gorgeous spaces in the most beautifull places of the world.

I imagined these spaces still being there, long after I died, and my name had  
became well known.”

However, growing up and learning about the differences between my Western  
world and the other 90 percent, made me realize I wanted to leave more than just  
beautiful things.

Fig. 1-1\_ Ana, Tinko

*“I met a nice couple in Guinea Bissau [...] They showed me how they live in a 16 m2 room in one of the compounds of the village.*

*I went to all the IKEA stores in The Netherlands [...] I found a fabulous 16 m2 showroom of which I was sure it would fit perfectly in their room“*

*“I flew to Africa to be able to help unpacking the boxes I had sent them to refurnish their room. Ana and Tinko were happy, they invited all their friends and family to come and see.*

*I felt I had saved them.”*

## Introducing > the contemporary city dialogue

*The city is a fine example of a complex system. The fragments of the city can only be understood through the whole, and the whole is more than a simple sum of the fragments.*

*(Pickett, 2013).*

“The city” is a cultural object. Every city is characterized by centralities and marginalities

Many places in the city that had been defined as ‘others’ have gradually become subjected to a process of radical segregation that is likely to climax in the ethnical stigmatization of communities and places (Auyero, 2007).

Fragmentation and segregation

## Defining

- > Spatial planning under Communism in Bulgaria
- > The political landscape and it's consequences for the Roma

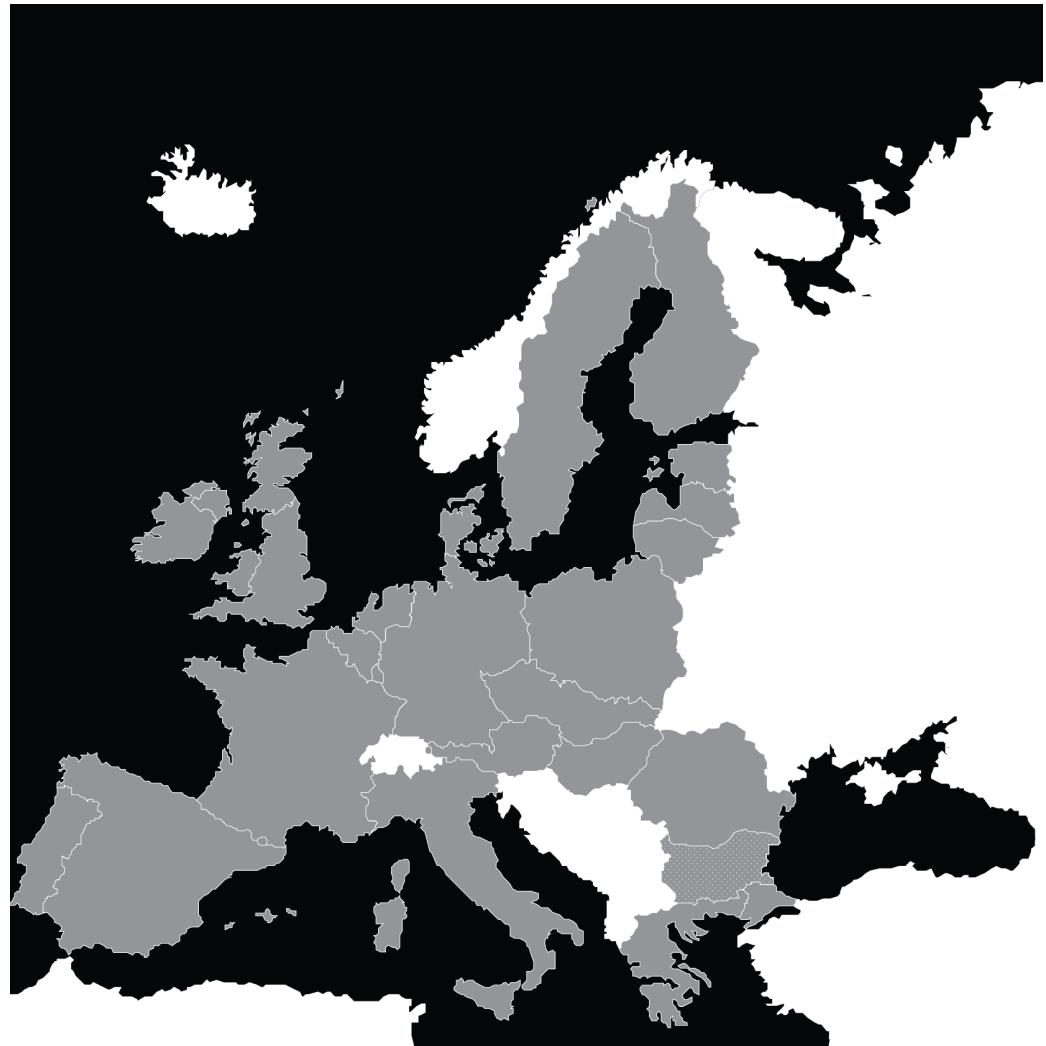

Fig. 1-7\_ Europe: European Union Member States are visualized in grey

Fig. 1-8\_ Bulgaria: Varna is the largest city and seaside resort on the Bulgarian Black Sea Coast and the third city of the Republic of Bulgaria

## Defining > Spatial planning under Communism in Bulgaria

*“Throughout its history, communism was modernity’s most devout, vigorous and gallant champion – pious to the point of simplicity. It is also claimed to be its only true champion... it was under communist, not capitalist, auspices that the audacious dream of modernity, freed from obstacles by the merciless and omnipotent state, was pushed to its radical limits: grand design, unlimited social engineering, huge and bulky technology, total transformation of nature.”*

*Zygmunt Bauman, 1991*

The spatial planning system was centralized, technocratic and subordinated to national economic interests (Hirt, 2005).

Spatial plans were just the local translation of state economic plans. Urban planners therefore were mainly ‘technical executors’ of state goals at the local level.

Systematization: social engineering

Contemporary urban challenges are rooted in the technocratic traces of the communist spatial planning system

## Defining > The political landscape and its consequences for the Roma

*The collapse of communism has put a theoretical end to the programmatic governmental efforts to 'integrate' the Roma in Bulgarian society without acknowledging cultural characteristics of Roma culture.*

Eastern-European Roma culture: Roma have been a dispersed ethnic population which was spread all over Europe since their arrival in Europe in the thirteenth century (Gropper, 1975). Its internal economy has been build around self-employment, preserving old expertise while achieving new skills to adapt

The Roma in Communist Bulgaria: forced socio-cultural processes have put an end to their culture, sedentarisation process. Gradually losing the defining characteristics of an ethnic group.

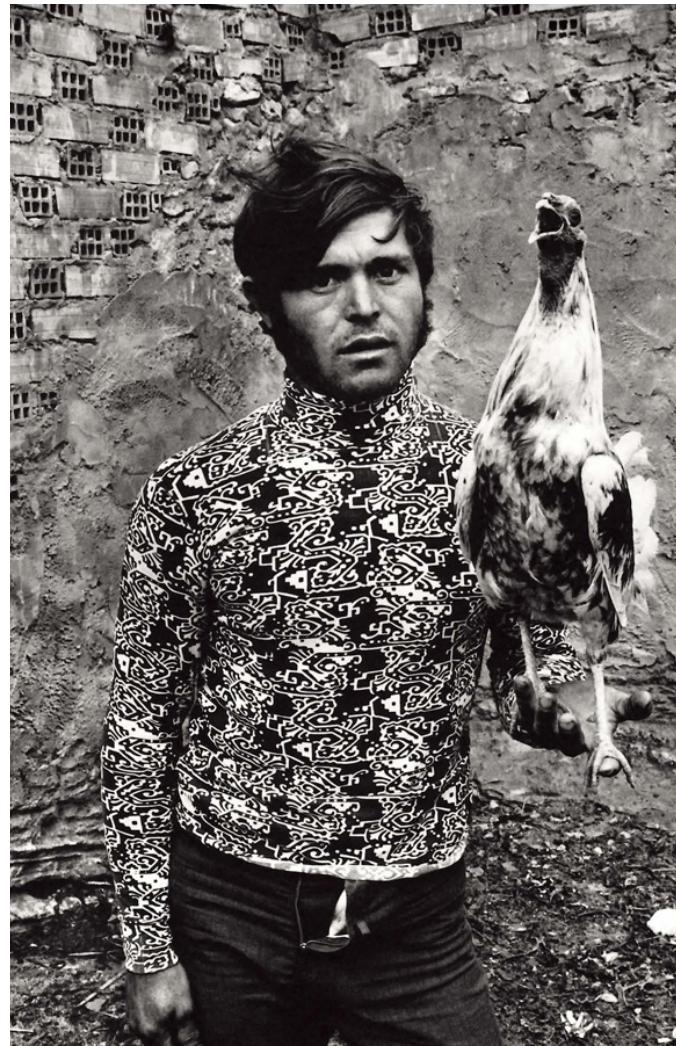

## ^ Pre-communist Roma culture

*Fig. 1-9\_Since the beginning of Romani studies the nomadic lifestyle is considered to be the structural and defining characteristic of their culture*

*Fig. 1-10\_Dancing bears had been a part of Balkan Roma culture with roots going back to the first millennium AD by the migration of the Roma towards Europe from India.*

*Fig. 1-11\_Domestic animals are part of the family. This can be traced back their Indian roots, where cows are considered sacred.*

*Fig. 1-12\_The Romani people have long acted as entertainers and tradesmen. Most Romani music is based on the folk music of the countries where the Romani went through. It is an important cultural expression providing income.*

## ^ Roma culture during communism

*Fig. 1-13\_At the beginning of the 1960s, the communist authorities started with settling the nomadic Gypsies in fixed settlements Even if they were provided with houses, the Gypsies continued to live for a time in a tent pitched in the yard, with the house used as a stable for the horses.*

*Fig. 1-14\_Roma worked in agriculture to a greater extent than in the pre-communist era. Romani were employed particularly as day or seasonal workers at state farms, leading to seasonal work migration. This enabled them to earn a living.*

*Fig. 1-15\_Especially urban Roma lost their ethnic identity. They were forced to completely abandon their traditional occupations, social behaviour and cultural expressions in order to technocratically align themselves with common Bulgarian culture*

*Fig. 1-16\_In the new economic and social context, Roma who still practised their old crafts were forced to take up modern professions and occupations. Blacksmiths found a new role in heavy industry and construction*

## ^ Post-communist Roma culture

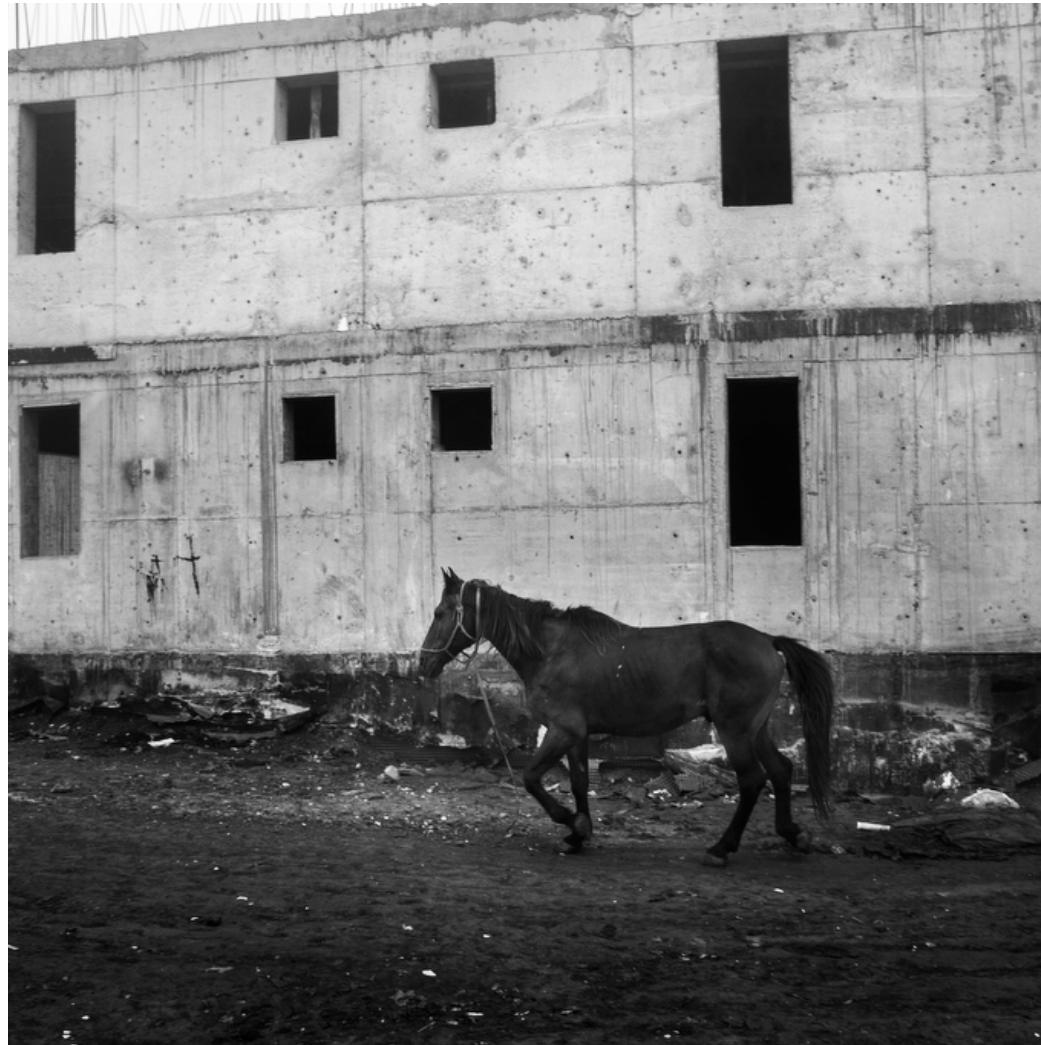

Fig. 1-17\_Although the ban on a nomadic lifestyle ended with the fall of the Communist regime, there are few traditional Roma communities with preserved old trades, language and ethnic and cultural characteristics.

Fig. 1-18\_Relocation to resettlement sites has been a model for the integration of Roma under communism, as aspect of the systematization program, meanwhile it appears to be a still applied policy model even in post-communist Bulgaria

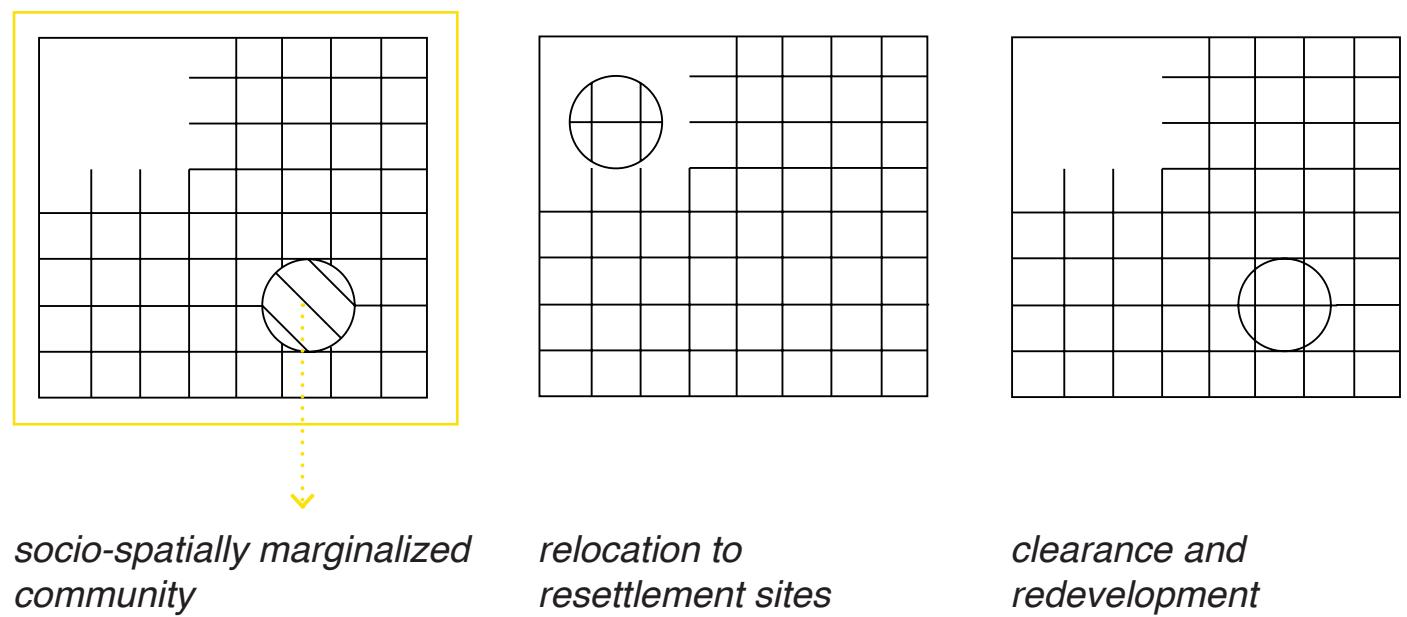

*Fig. 1-19\_The urban landscape in Eastern Europe is characterized by clusters of Roma communities living under primitive housing conditions with heavy seasonal exposure and natural hazard.*

*Fig. 1-20\_Clearance and redevelopment of Roma settlements to meet modern, western housing standards lacks acknowledging the specific characteristics of the Roma culture*

*But to what extent is the  
'systematisation' program under  
Communism actually different from  
contemporary integration models?*

*Fig. 1-21\_ conceptual models for the integration of  
marginalized communities*

## Spatializing > The historical development of Varna

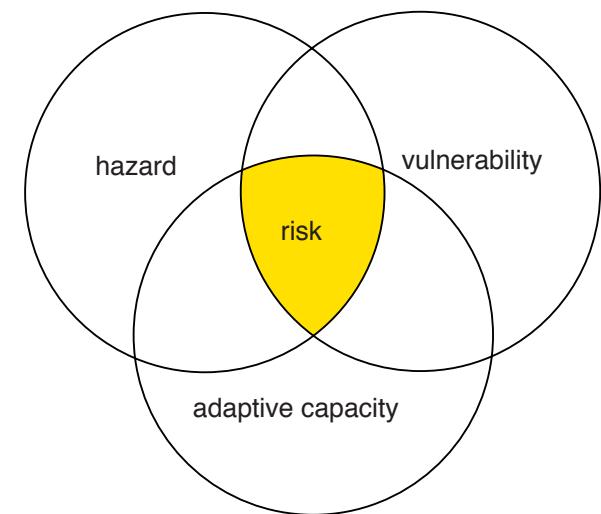

## Spatializing > The challenges of the contemporary urban landscape of Varna

*Spatial fragmentation is in co-existence with social segregation. This conceptualizes that urban fragmentation can work as accentuated segregation that is materialized in space through barriers.*

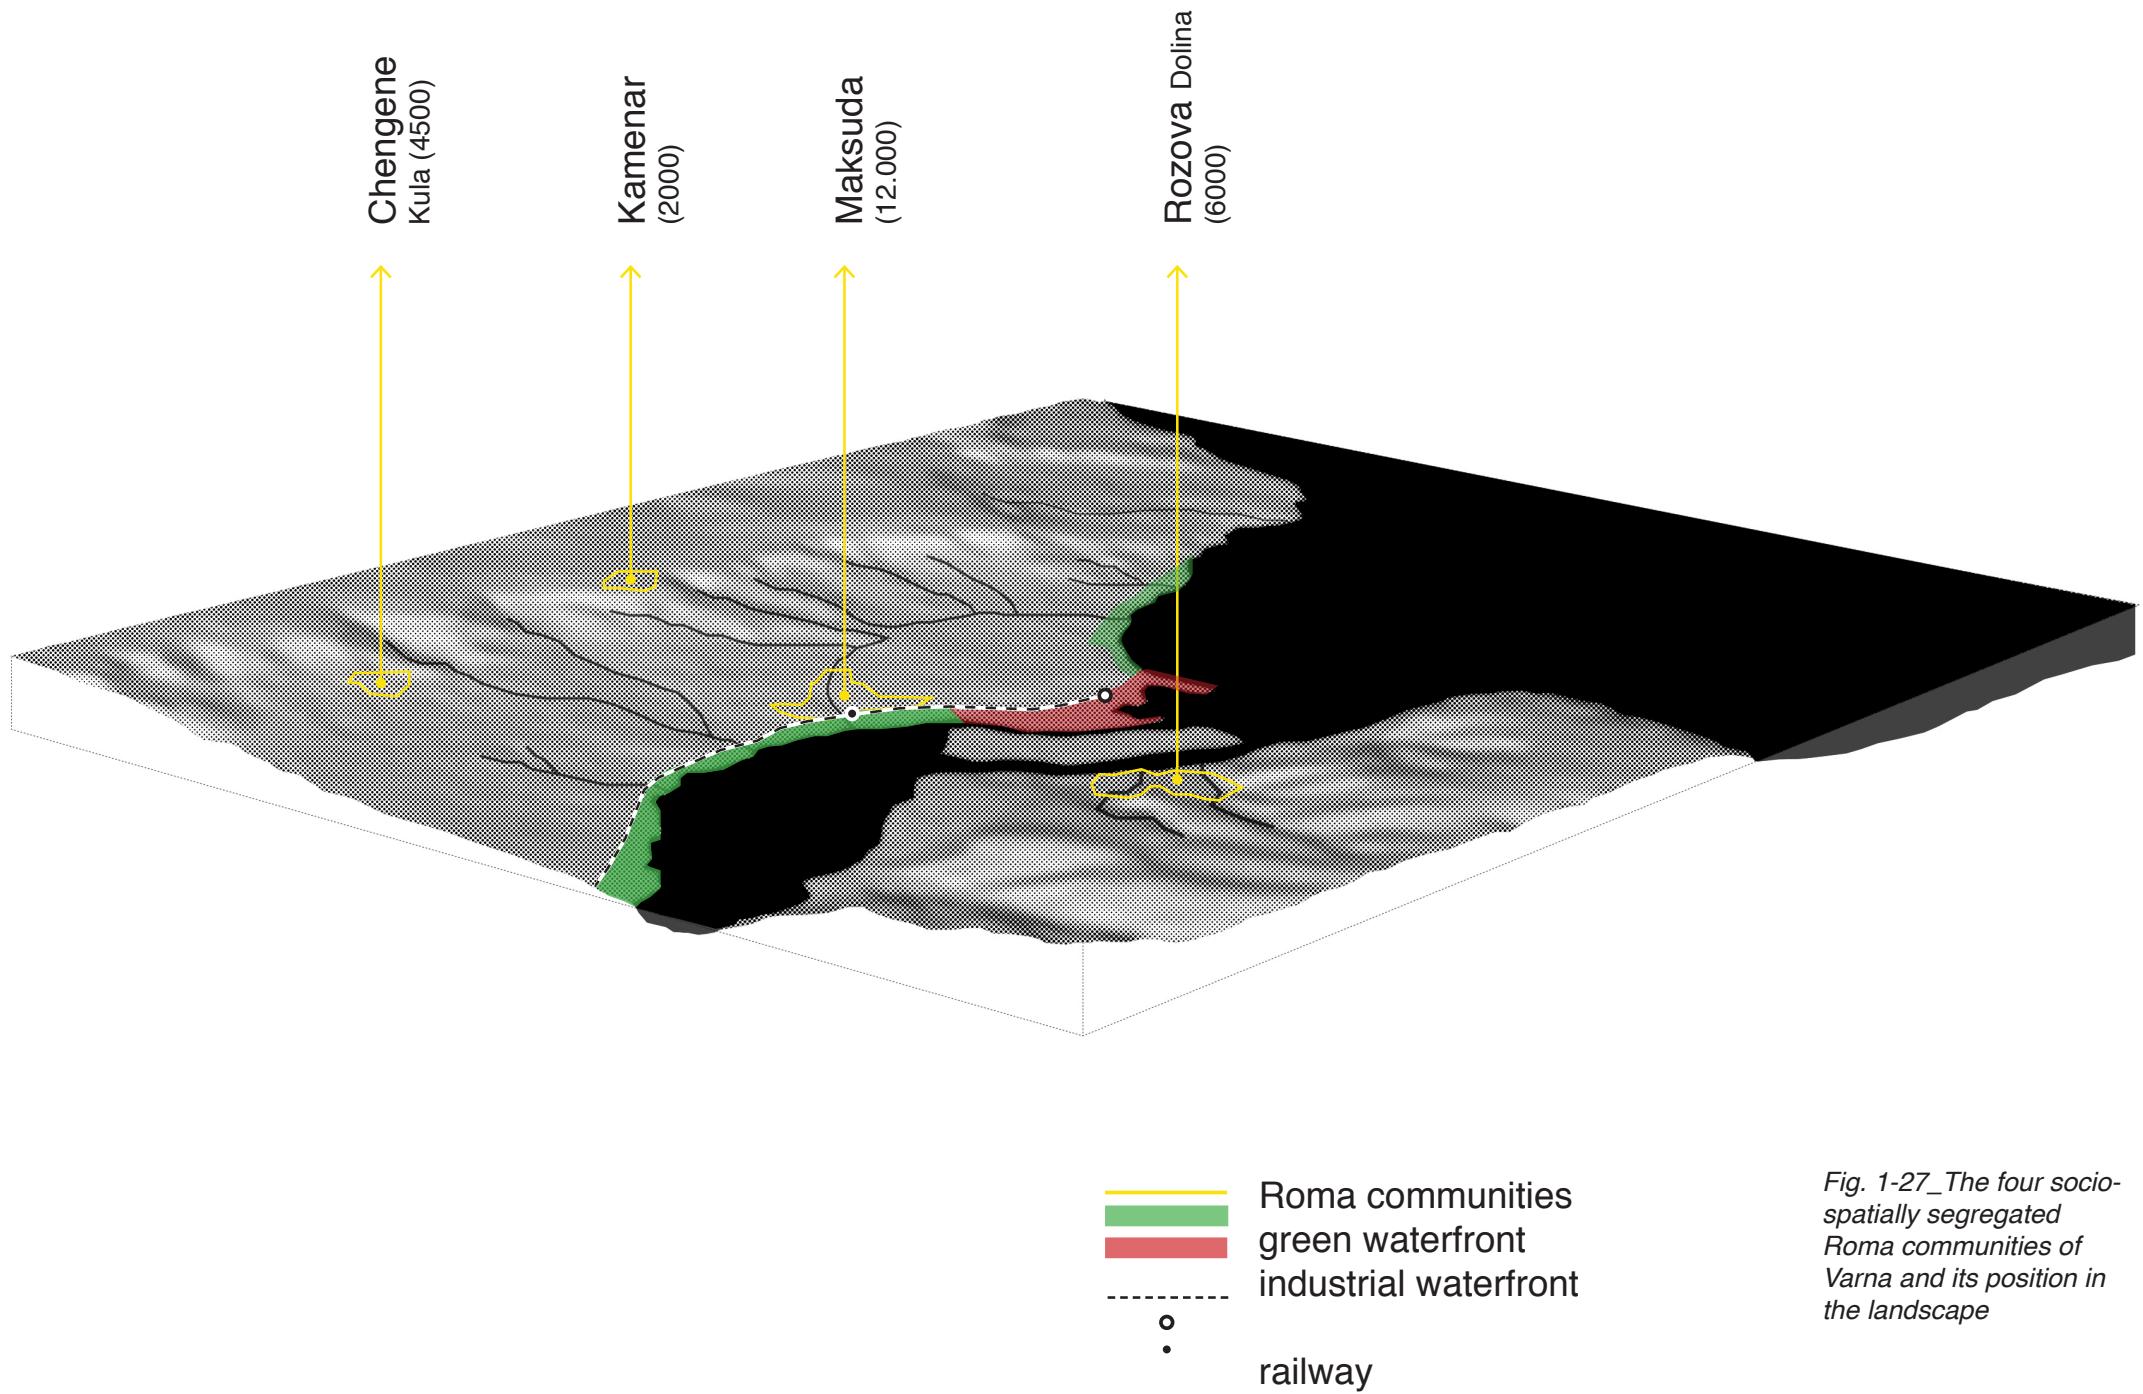

*(Thullier, 2005)*

*Fig. 1-25\_The urban landscape of Varna is highly fragmented, communities are accentuated segregated as the drainage system is a dividing barrier. The city is divided by law into five boroughs, which adds a political challenge to integratively reconnect all fragments.*

*Fig. 1-26\_The Roma are a community at risk*

## ^ The Roma communities and its position in the landscape

Fig. 1-28\_The Roma community of Kamenar, located on the Franga Plateau (resettlement community)

Fig. 1-29\_The Roma community of Maksuda, located in the Franga Dere (original community)

Fig. 1-30\_The Roma community of Chengene Kula, located on the descending terraces of the Franga Plateau (resettlement community)

Fig. 1-31\_The Roma community of Rozova Dolina, located in the Avren Dere (original community)

## ^ The contemporary relation of the city with its landscape

*Fig. 1-32\_ The inaccessible, industrial waterfront of the port of Varna*

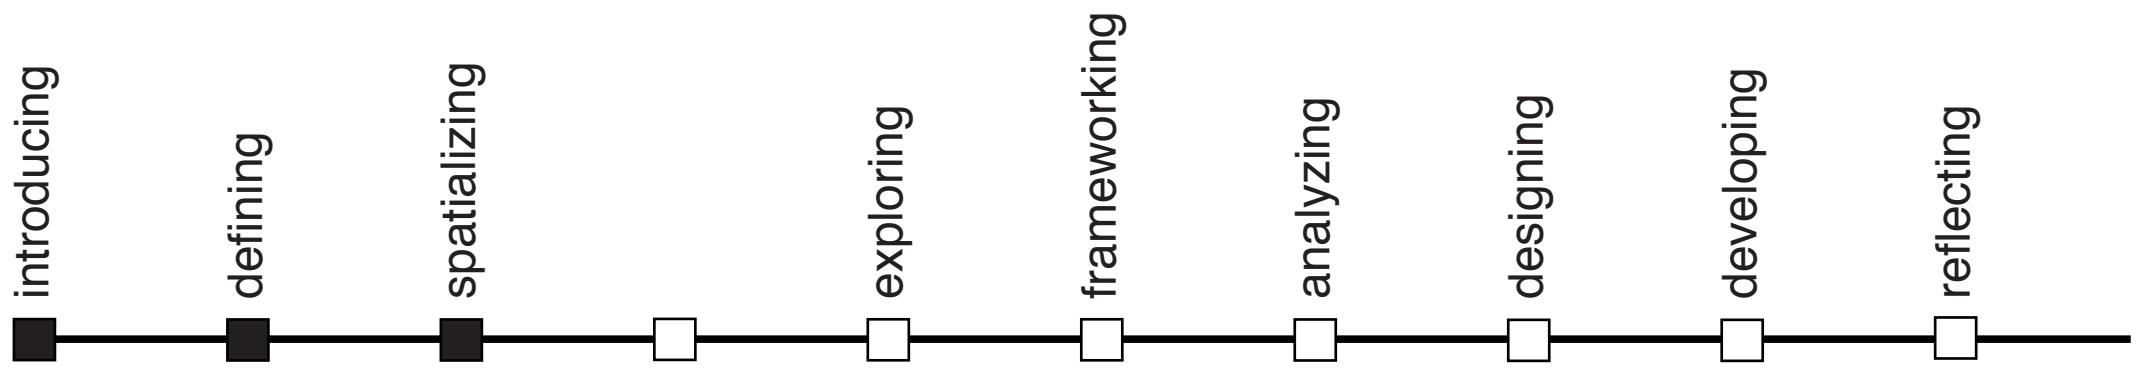

*Fig. 1-33\_ the Primorski Park adds a high value to the social life of Varna's citizens, at the same time it's dense structure limits the connection of the city with the Black Sea*

*Fig. 1-34\_ The waterfront along Lake Varna carries potential as metropolitan park structure, but the railway is making it inaccessible for citizens.*

*Fig. 1-35\_ The inner-city relation with the natural landscape is highly artificial.*

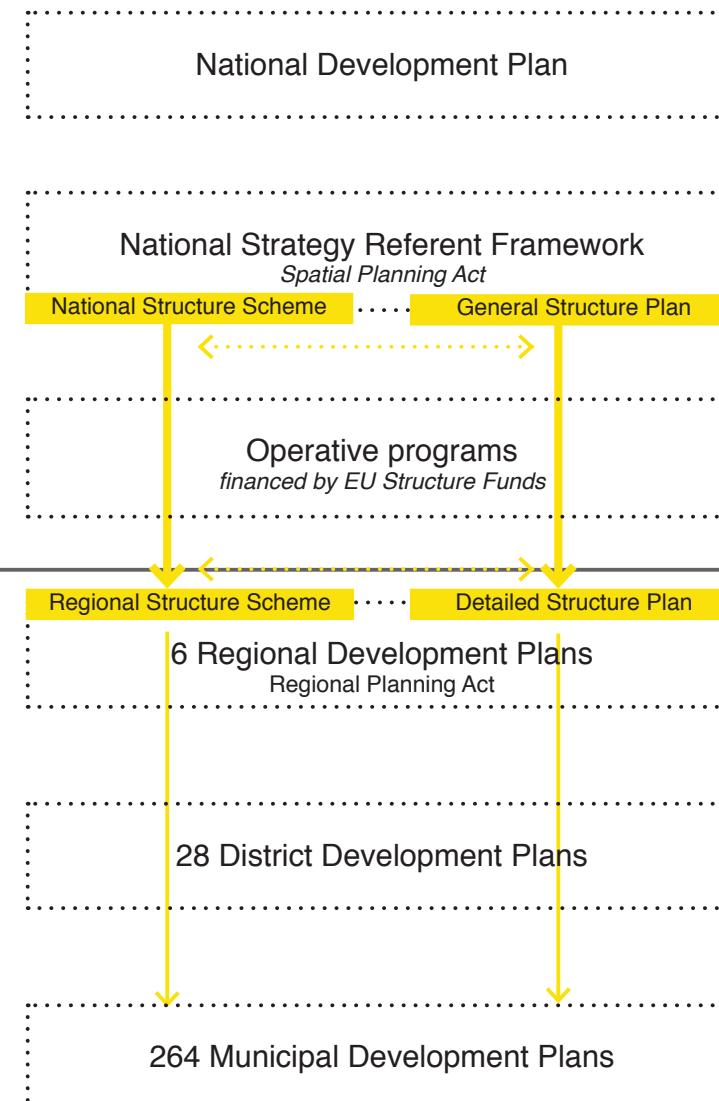

Fig. 1-36\_ This tourist map by the "Institute for Research and Design Cartography" in 1979 shows the envisioned 'Western' park on the location of Maksuda. It has never been realized.

## Approaching

- ^ Europeanization of the Bulgarian Spatial Planning system
- ^ EU framework for National Roma Integration Strategies
- ^ The significance of public space in the fragmented city
- ^ The Operative Landscape Approach
- ^ The Cultural Enclave and The Corridor

## The European Spatial Planning agenda

Europe 2020 strategy - EU Framework for National Roma Integration Strategies

Bulgaria 2020

National Strategy Roma Integration of the Republic of Bulgaria (2012-2020)

Action Plan for Implementation of the National Strategy Roma Integration of the Republic of Bulgaria

The Regional Plan for the Development of North East Region for the Period 2014 -2020

District Development Strategy for Varna District for the period 2005-2015

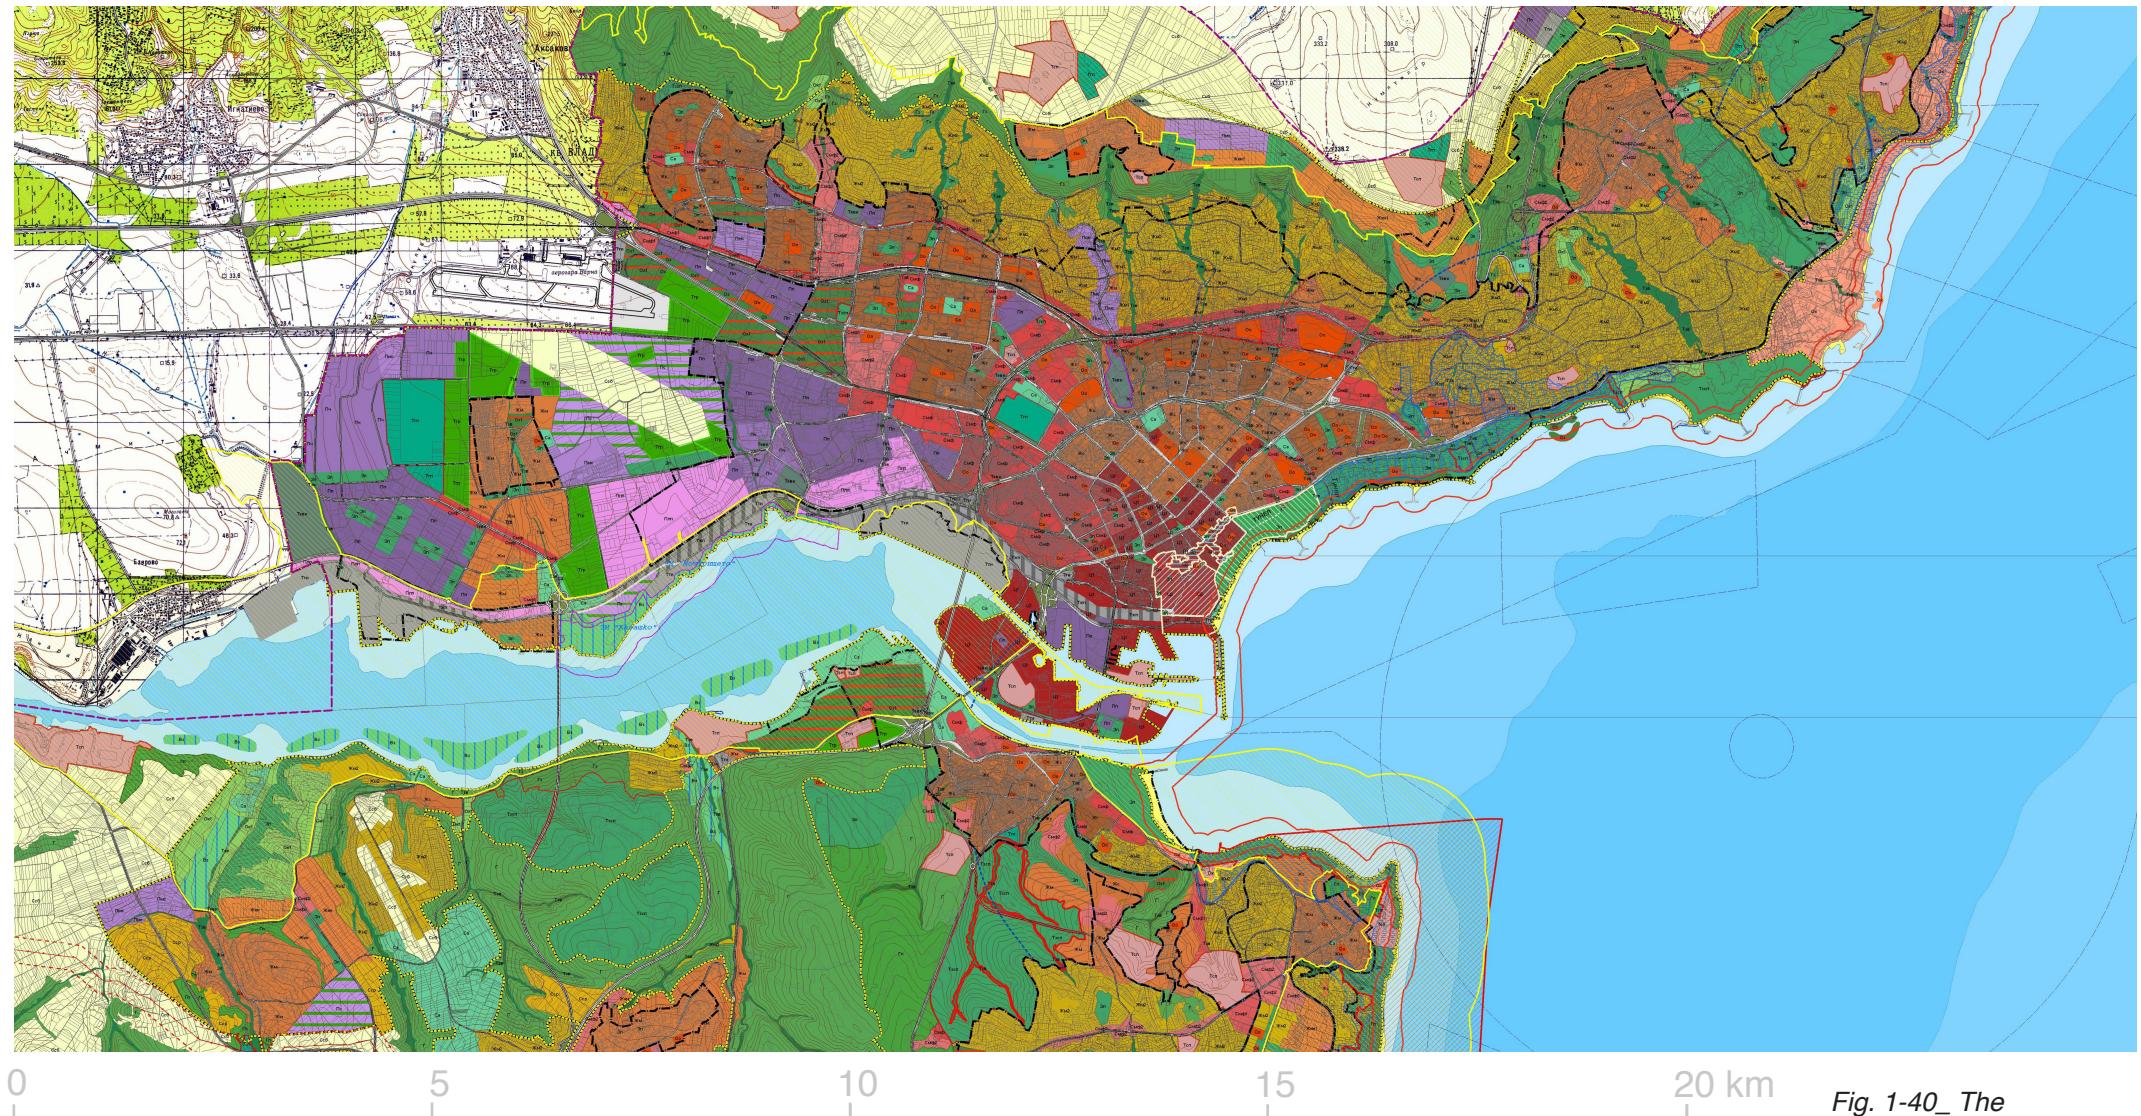

Municipal Development Plan of Varna Municipality for the period 2014-2020

Fig. 1-37\_ Hierarchy of planning structures in Bulgaria. Europeanisation has added a new layer above the national planning system of Bulgaria.

## Approaching > EU framework for National Roma Integration Strategies

*Fig. 1-38\_The EU framework for National Roma Integration Strategies defines four essential topics to promote social-economic integration of Roma within an overall process of non-discrimination of minorities in the society.*

*Fig. 1-40\_ The Development Strategy for Varna published by the Municipality of Varna in 2013 has not been published together with a specific strategy on Roma*

## ^ Implementing the National Strategy for Roma Integration

Fig. 1-41\_ The demolition of illegal Roma settlements with bulldozers

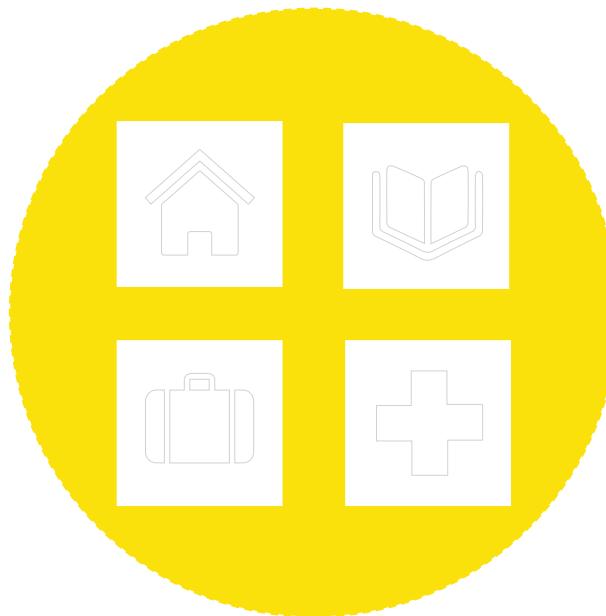

Fig. 1-42\_Relocation of Roma in modular housing concepts

Fig. 1-43\_ Interior of an illegally constructed house which will be demolished

Fig. 1-44\_Interior of a new modular house

## Approaching > The significance of public space in the fragmented city

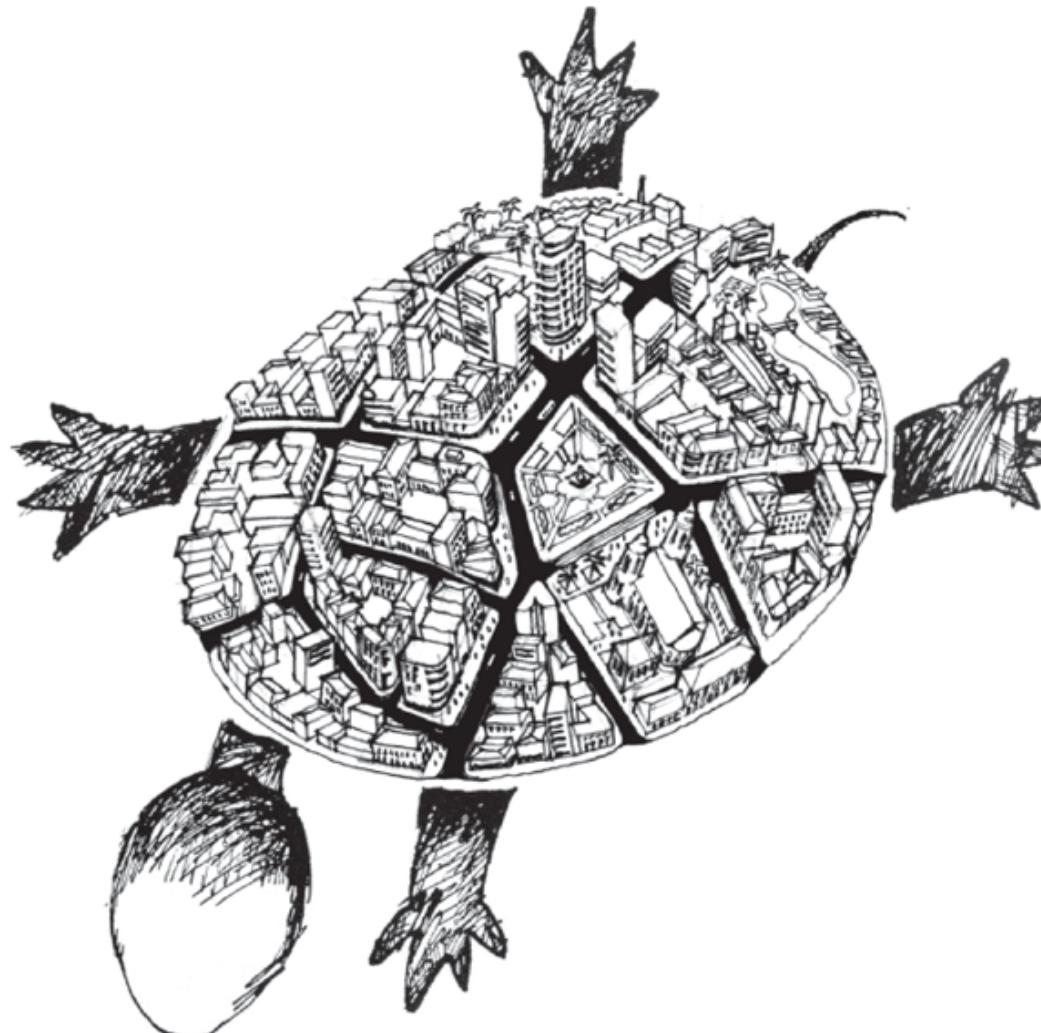

The idea of the city as a cultural object argues a specific human dimension on the concept of public space, thus public space is more than just physical state-owned space.

From a cultural point of view, public space is the core of the symbolic life of a city as this is where the experiences and daily activities of its inhabitants converge. Public space is the physical representation of community life and the community expression of contact among individuals (Janches, 2010).

*Fig. 1-45\_Public space as the forum for integration*

## Approaching > The Operative Landscape Approach

*Fig. 1-46\_The  
metaphorical turtle:  
the city is an integrated  
structure of life, work and  
mobility together*

If public space is the medium for integration, then the landscape is our canvas...

The operative landscape approach defines the landscape as a constantly evolving medium that takes notion of programmatic and ecological dynamics and uses landscape to direct communities to an inclusive whole by incorporating change over time and maintaining an active project agenda (North, 2012).

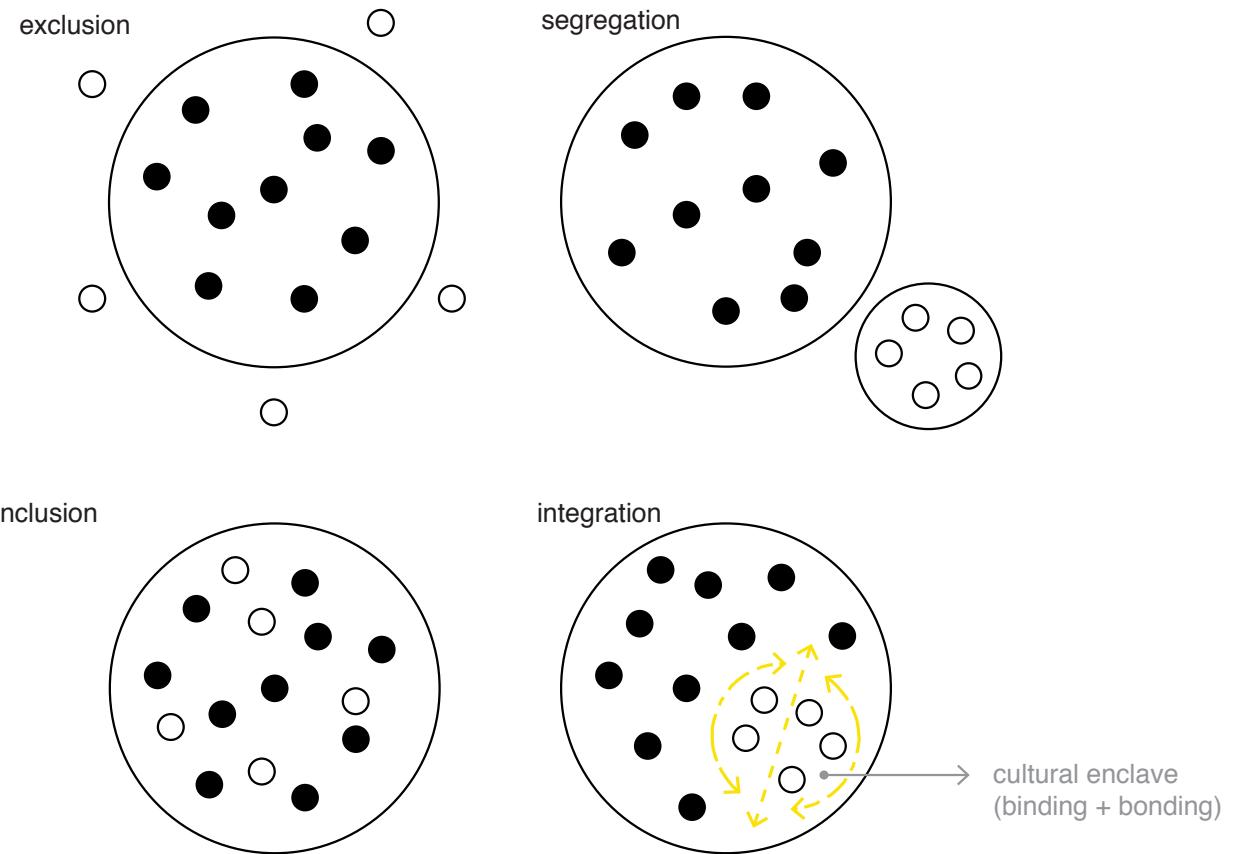

...so this approach can provide the clues to a landscape-based reorganisation of the socio-spatial fragmentation of the city of Varna

## Approaching > The Cultural Enclave and The Corridor

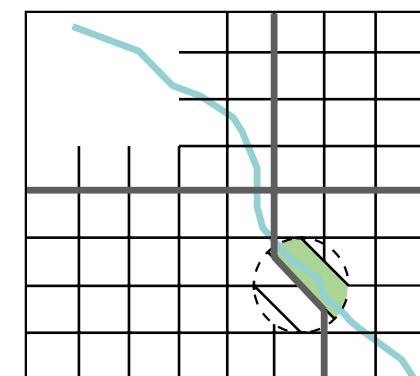

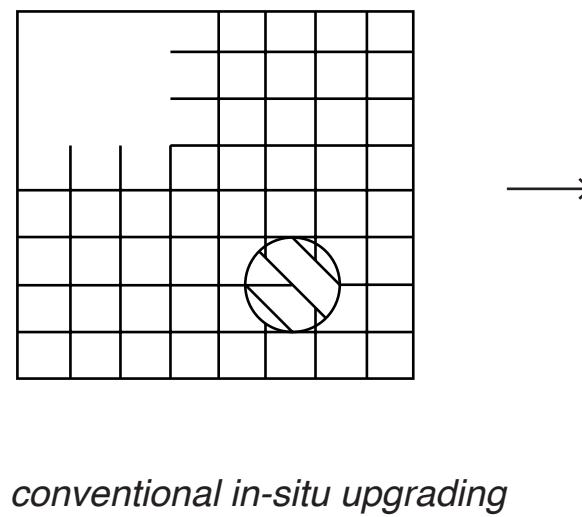

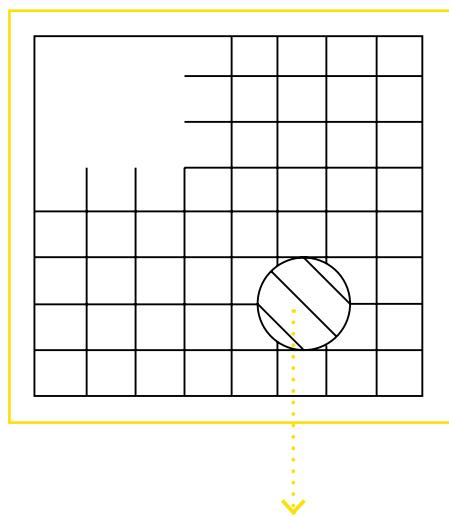

*approach during communism:  
supposed exclusion > inclusion*

*current approach:  
acknowledged segregation > inclusion*

*proposed future approach:  
acknowledged segregation > integration*

*Fig. 1-47\_ Graphical representation of terms considering the 'integration' of minority in a majority*

*Fig. 1-48\_ From conventional in-situ upgrading towards a landscape-based approach in which the formalized neighborhood is a Cultural Enclave with urban significance using landscape features as binding element*

Reflecting  
^ thesis statement

Socio-spatial clustering seems to be an inevitably present element of the urban landscape, but it is not generally rejectionable. This thesis provides a strategic socio-spatial development framework within which segregation is socially acceptable and may be differentiated from that which is undesirable. The thesis makes a statement on how something different can be something equally valuable.
