

SLEEPING ON CLOUDS

ECONOMY CLASS SLEEPING FACILITY

Evaluation of the Design showed that out of 184 respondents between 17 and 75 years old with long-haul flight experience (6 hours or longer) 70% would want to book an Economy Class Bed as presented.

Economy Class Bed with a length of 193 cm

Sleeping is the most performed activity inside an Airplane, an activity that gets rated extremely low on comfort. This is due to economy seats not being a suitable environment to sleep. The Economy Class Sleeping Facility offers a 193cm long flat-bed located in Economy Class. This sleeping facility is specifically designed for the Flying V concept plane. During Taxi, Take-Off and Landing the beds are transformed into seats. This unique system makes sure that passenger capacity of the airplane does not decrease, it even increases by 3.
