Sinds begin crisis 22.000 winkels minder

© VANDAAG, 05:27 ECONOMIE

Een winkel van de failliete kledingketen Mexx in Haarlem ANP

Sinds het begin van de economische crisis in 2008, zijn in Nederland zo'n 22.000 winkels verdwenen, het overgrote deel na faillissement. Aan het eind van dit jaar zijn er nog circa 90.000 over. Dat heeft marktonderzoeker Q&A berekend.

Afgelopen jaar gingen bijvoorbeeld landelijke ketens als Mexx, Halfords, Henk

Vacancy

Changing consumer behaviour

Problem statement

The Netherlands has witnessed an increase in retail vacancy. In comparison to office vacancy retail vacancy has an impact on area level at much lower vacancy rates.

The requirements for inner city retail space from both consumer and retailer forms a potential explanation for the increased vacancy rate in some areas. However the relationship between area and object characteristics and vacancy is unclear.

Research Questions

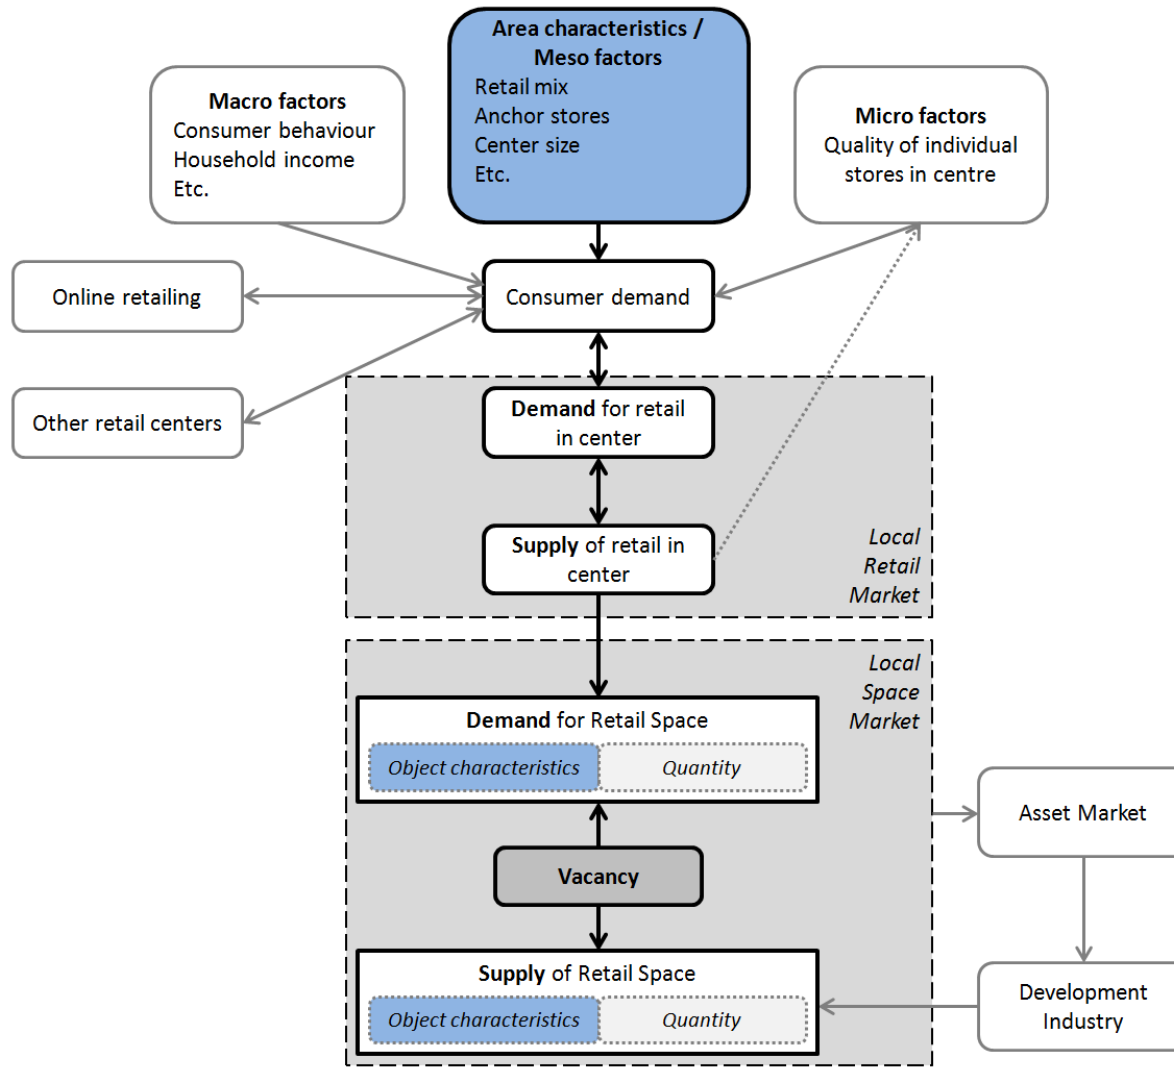

Main research question: How are area and object characteristics related to vacancy in Dutch inner-city retail space?

Sub research questions:

- Q1: What is the cause of retail vacancy; what role do area and object characteristics play?
 - Q2: What area and object characteristics are driving the demand for inner city retail space?
 - Q3: Is there a relation between area characteristics and vacancy in the selected case areas?
 - Q4: Is there a relation between object characteristics and vacancy within the selected case areas?
-

Conceptual model

Theory

Vacancy on the retail market

- Increased competition
 - Oversupply vs Demand drop
 - Replacement market
-

Theoretical frame

- Urban hierachy
- Retail centre attractiveness
- Shopping motives

Gebiedsfactoren

*2. Aan welke eisen dient een winkelgebied te voldoen om aantrekkelijk te zijn voor de consument?

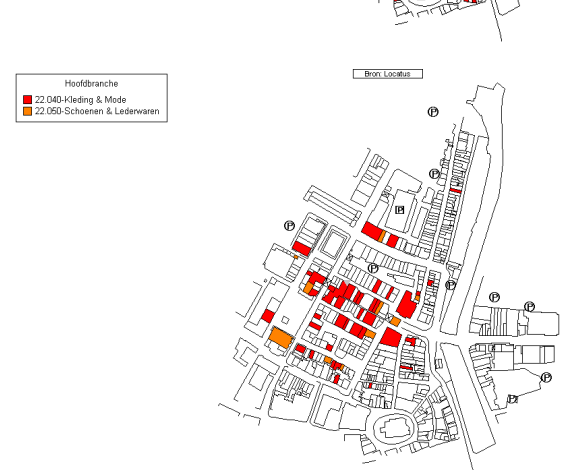

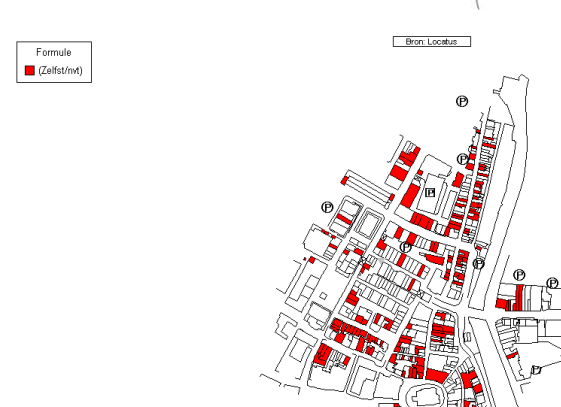

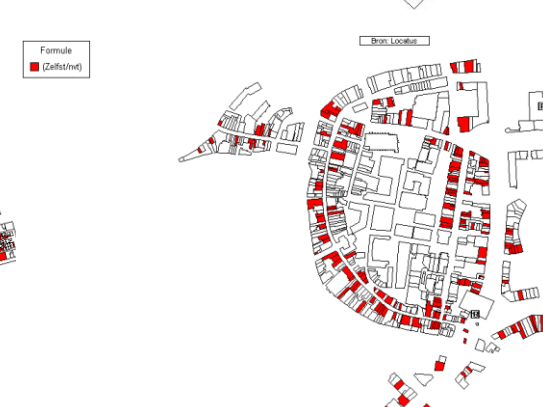

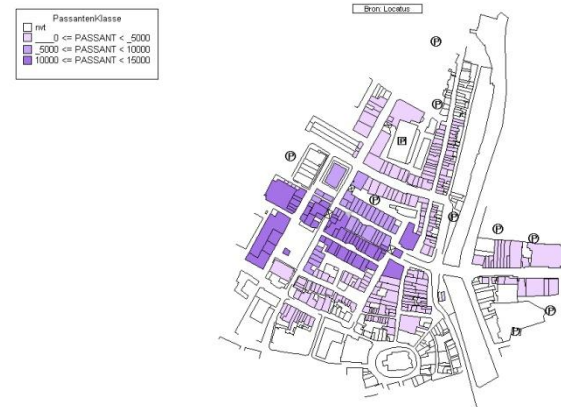

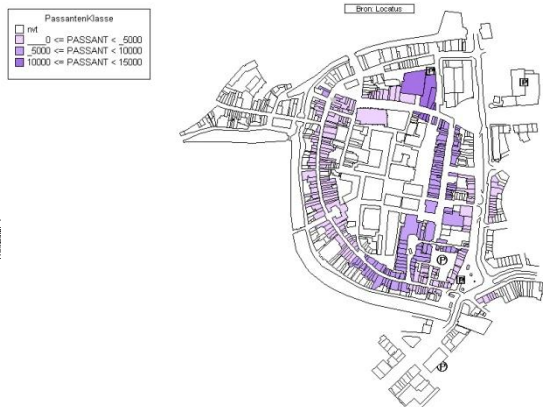

Hiermee wordt een winkelgebied bedoeld dat succesvol consumenten aantrekt, waar de consument graag terugkomt, lang verblijft en zijn Euro's uitgeeft. Nogmaals, het gaat hier om centrale winkelgebieden vanaf 200 winkels; de 53 grootste centrale winkelgebieden. Dit zijn de stadcentra van de grote en middelgrote steden in Nederland.

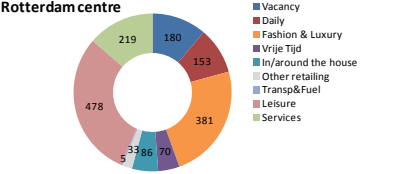

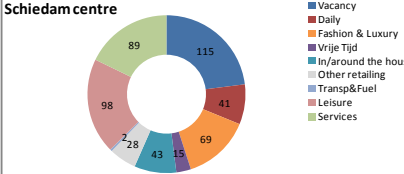

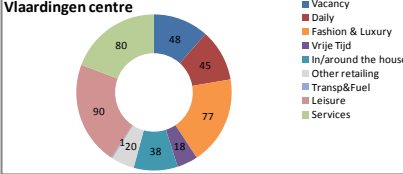

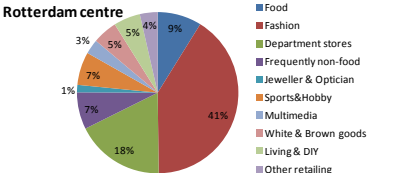

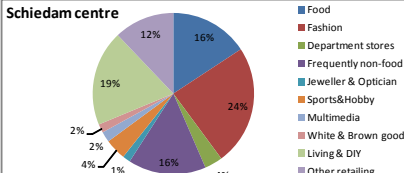

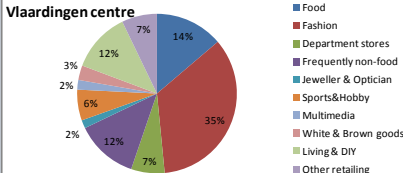

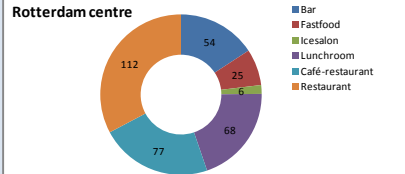

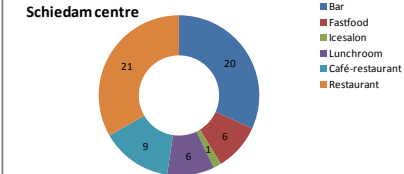

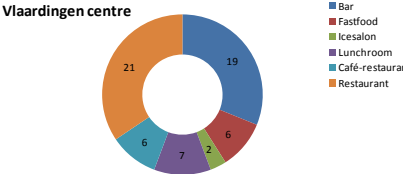

Rangschik de onderstaande factoren op volgorde van belangrijkheid: van meest belangrijk bovenaan (positie 1) tot minst belangrijk onderaan (positie 15).
(De rangschikking kan worden gemaakt door het verslepen van de factoren naar hun positie in de ranglijst, de positie in de ranglijst kan ook handmatig ingevoerd worden door middel van het selectie vakje voor de factor)

- ▼ **Functie menging:** De mix van stedelijk leven; van woningen tot voorzieningen zoals een theater, bibliotheek, bioscoop, et cetera.
- ▼ **Sfeer:** De perceptie van de sfeer in een winkelgebied bijvoorbeeld beïnvloed door geur, temperatuur, licht, netheid en architectuur.
- ▼ **Grootte van winkelgebied:** De grootte van het winkelgebied uitgedrukt in het aantal winkels.
- ▼ **Oriëntatie:** Zoekgemak en oriëntatiegevoel in het gebied.
- ▼ **Historische elementen:** Of het winkelgebied gelegen is in een historische binnenstad.
- ▼ **Gevelbeeld:** Het ontwerp en materialisatie van de straatgevels in het gebied en de variatie hierin.
- ▼ **Openbare ruimte en faciliteiten:** Het geheel van publiek toegankelijke ruimte en de invulling hiervan: straten en pleinen, bestrating, groen, straatmeubilair, openbare toiletten, en andere faciliteiten.
- ▼ **Horeca:** Het aanbod aan eet- en drinkgelegenheden in het winkelgebied.
- ▼ **Trekkers:** De aanwezigheid van trekkers. Dit zijn veelal grootschalige winkels van winkelketens die een sterke trekkracht uitoefen op de consument. Voorbeelden hiervan zijn Primark, Bijenkorf en Zara.
- ▼ **Markten en evenementen:** Markten, evenementen en overige activiteiten georganiseerd in het winkelgebied.
- ▼ **Retail mix:** De variatie in het type winkels; variatie in branchering (type product dat wordt verkocht) en variatie in prijs en kwaliteit (van goedkoop tot hoogsegment).
- ▼ **Bereikbaarheid en parkeren:** De bereikbaarheid van het winkelgebied voor de verschillende vormen van mobiliteit (auto, openbaar vervoer, fiets, etc.) en parkeerfaciliteiten.
- ▼ **Routing / lay-out:** De lay-out van het winkelgebied: het stratenpatroon, de verdeling van de verschillende winkels en de plaatsing van horeca faciliteiten.
- ▼ **Veiligheid:** Het overall gevoel van veiligheid in het gebied.
- ▼ **Aanloopgebied:** De aanwezigheid van een zwerfmilieu; een gebied buiten de hoofdwinkelstraten met verrassende en andersoortige winkel formules, veelal zelfstandige winkeliers.

Case study

Factor	Indicator / raw variable	Value / *Note	Rotterdam centre	Schiedam centre	Vlaardingen centre

Conclusions

Conclusions

Q1: What is the cause of retail vacancy; what role do area and object characteristics play?

- While over the past decade the retail space stock was increased a number of macro factors caused a drop in the demand.
 - The attractiveness of a retail agglomeration affects the ability to attract consumers, stimulate them to spend more time and eventually money, and stimulate patronage intentions.
 - Attractiveness attributes determine the place of a centre in the hierarchy of retail centres.
 - As an effect of the oversupply and a fall back in the demand on the retail space market retailers are in a stronger negotiation position. Experts indicate there is a replacement market within retail centres creating gaps in the retail structure, especially outside the core retail area.
 - Retailers are increasingly critical concerning where to locate.
 - Furthermore vacancy has a self stimulating effect since it affects both object and area factors.
-

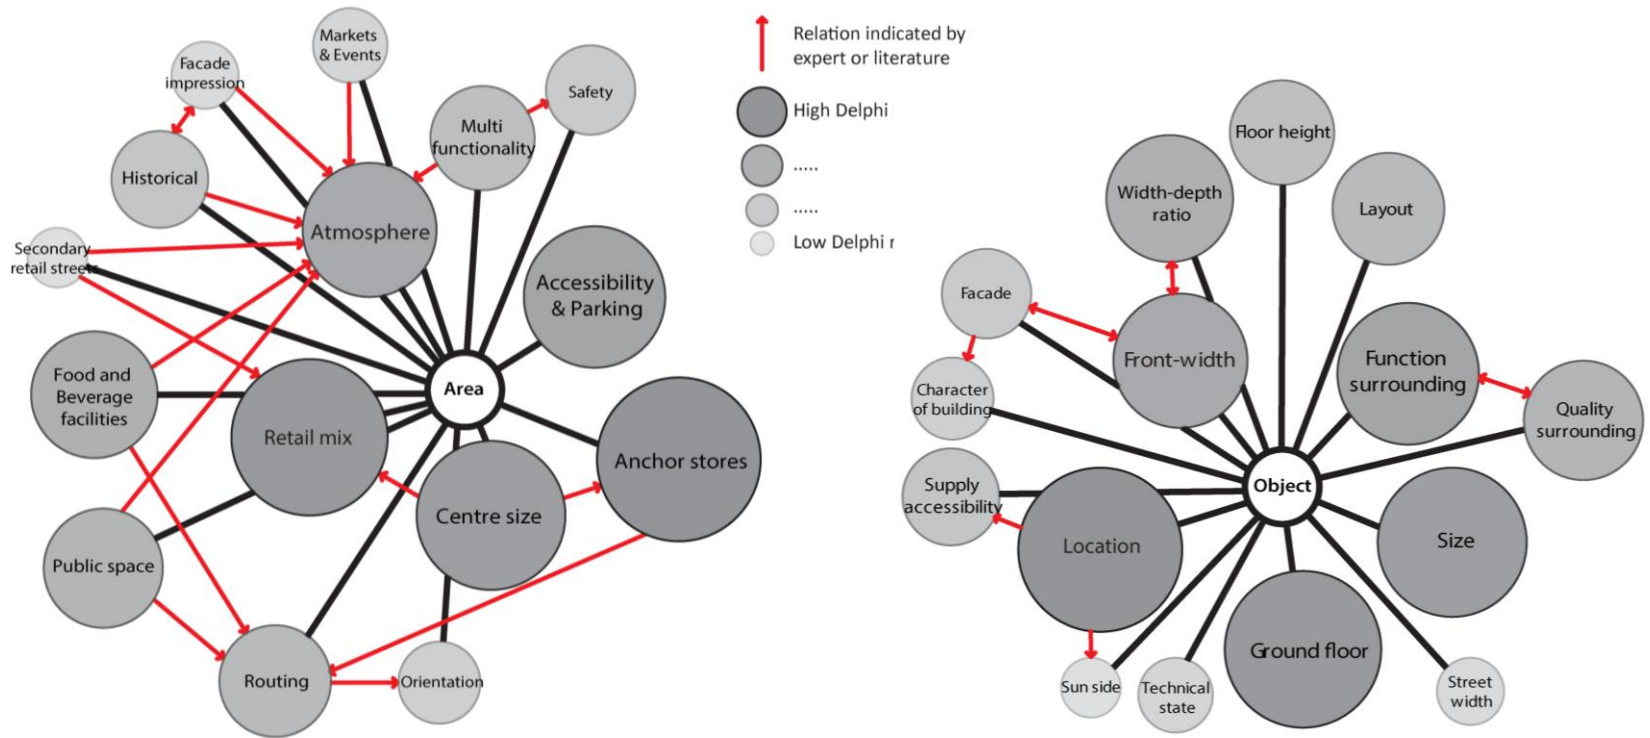

Conclusions

Q2: What area and object characteristics are driving the demand for retail space?

Conclusions

Conclusions

Q3: Is there a relation between area characteristics and vacancy in the selected case areas?

Q4: Is there a relation between object characteristics and vacancy within the selected case areas?

Conclusion

Main research question: How are area and object characteristics related to vacancy in Dutch inner-city retail space?

Recommendations for practice

- Focus on important factors
- Focus on quality while taking into account place in hierarchy
- Proactive approach
 - Be aware of self stimulating effects
 - Compactness centre
 - Transformation
 - Urban re-allotment
