

## ***PATCHING UP THE METROPOLITAN CARPET WITH WOODS***

*An exploration on how a forest-based strategy  
can enhance the landscape identity and drought  
adaptation within  
Stedelijk Gebied Eindhoven*

Xinyi WANG  
P5 Presentation  
2024.06.26

## ***SGE - A landscape losing identity***

### **Expats zoeken woonruimte rond Eindhoven**

Gepubliceerd op 03 oktober 2013: Laatste update 09 september, 07:44;

#### **Beschrijving**

David Wilmot (uit Ierland) en zijn vriendin Kaitlin Mihalov (uit Amerika) in hun Eindhovense appartement. Volgens jonge expats is het steeds lastiger om betaalbare woonruimte te vinden. foto: Irene Wouters

EINDHOVEN - Het wordt dringen op de woningmarkt voor internationale kenniswerkers in en rond Eindhoven. Op dit moment verblijven naar schatting maximaal dertigduizend hoogopgeleide buitenlandse werknemers in de regio.

Zowel bedrijven als huisvesters rekenen op een toename in het komende jaar. De Technische Universiteit Eindhoven (TU/e) haalde dit studiejaar zelfs het hoogste aantal internationals tot nu toe binnen: zo'n vijfhonderd. "We krijgen ze gehuisvest, maar het wordt moeilijker", aldus medewerker Willem van Hooft.

De huisvesting van internationale kenniswerkers in en rond Eindhoven kan beter. Gezinnen met kinderen vinden doorgaans snel een woning in wijken of dorpen; zij gaan dicht bij de internationale School. [www.iaabr.nl](#)

***"...Streams grew clear and neat, so did the fields...  
Some people left for the city, and more came, bringing more houses with them.  
Everywhere became the same."***

***"...Municipal land policy, intensive agriculture, the Rhineland model and the extensive master plan.  
We have four funerals, but where is the wedding?"***

## ***SGE - A landscape of thirst***

**50 tot 60 miljard liter water: zo dorstig is de Brabantse natuur**

***SGE** - A Speeded Up Metropolitan landscape*

**Reclamation from Middle age**

**Age of consolidation and urbanization**

**Age of Fragmentation**

## ***SGE as a dispersed territory***

**Diversity within the Territory**

**Coherence**

**Narrative places in the territory**

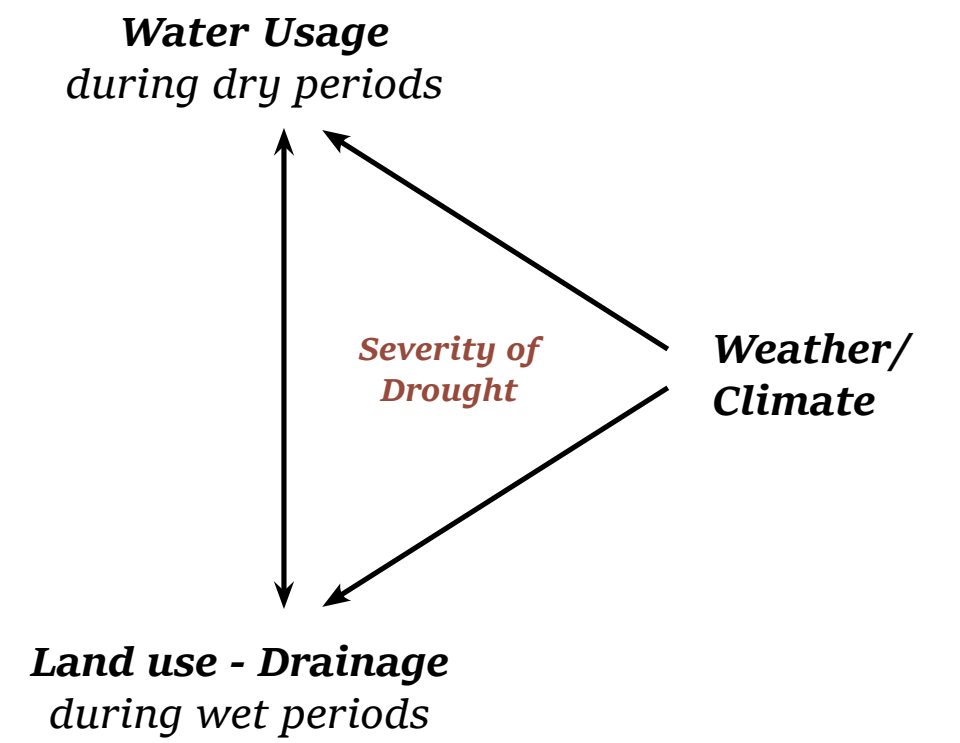

**Diversity within the Territory**

**Coherence**

**Narrative places in the territory**

## A metropolitan carpet...

**...of 37% (urban)forest**

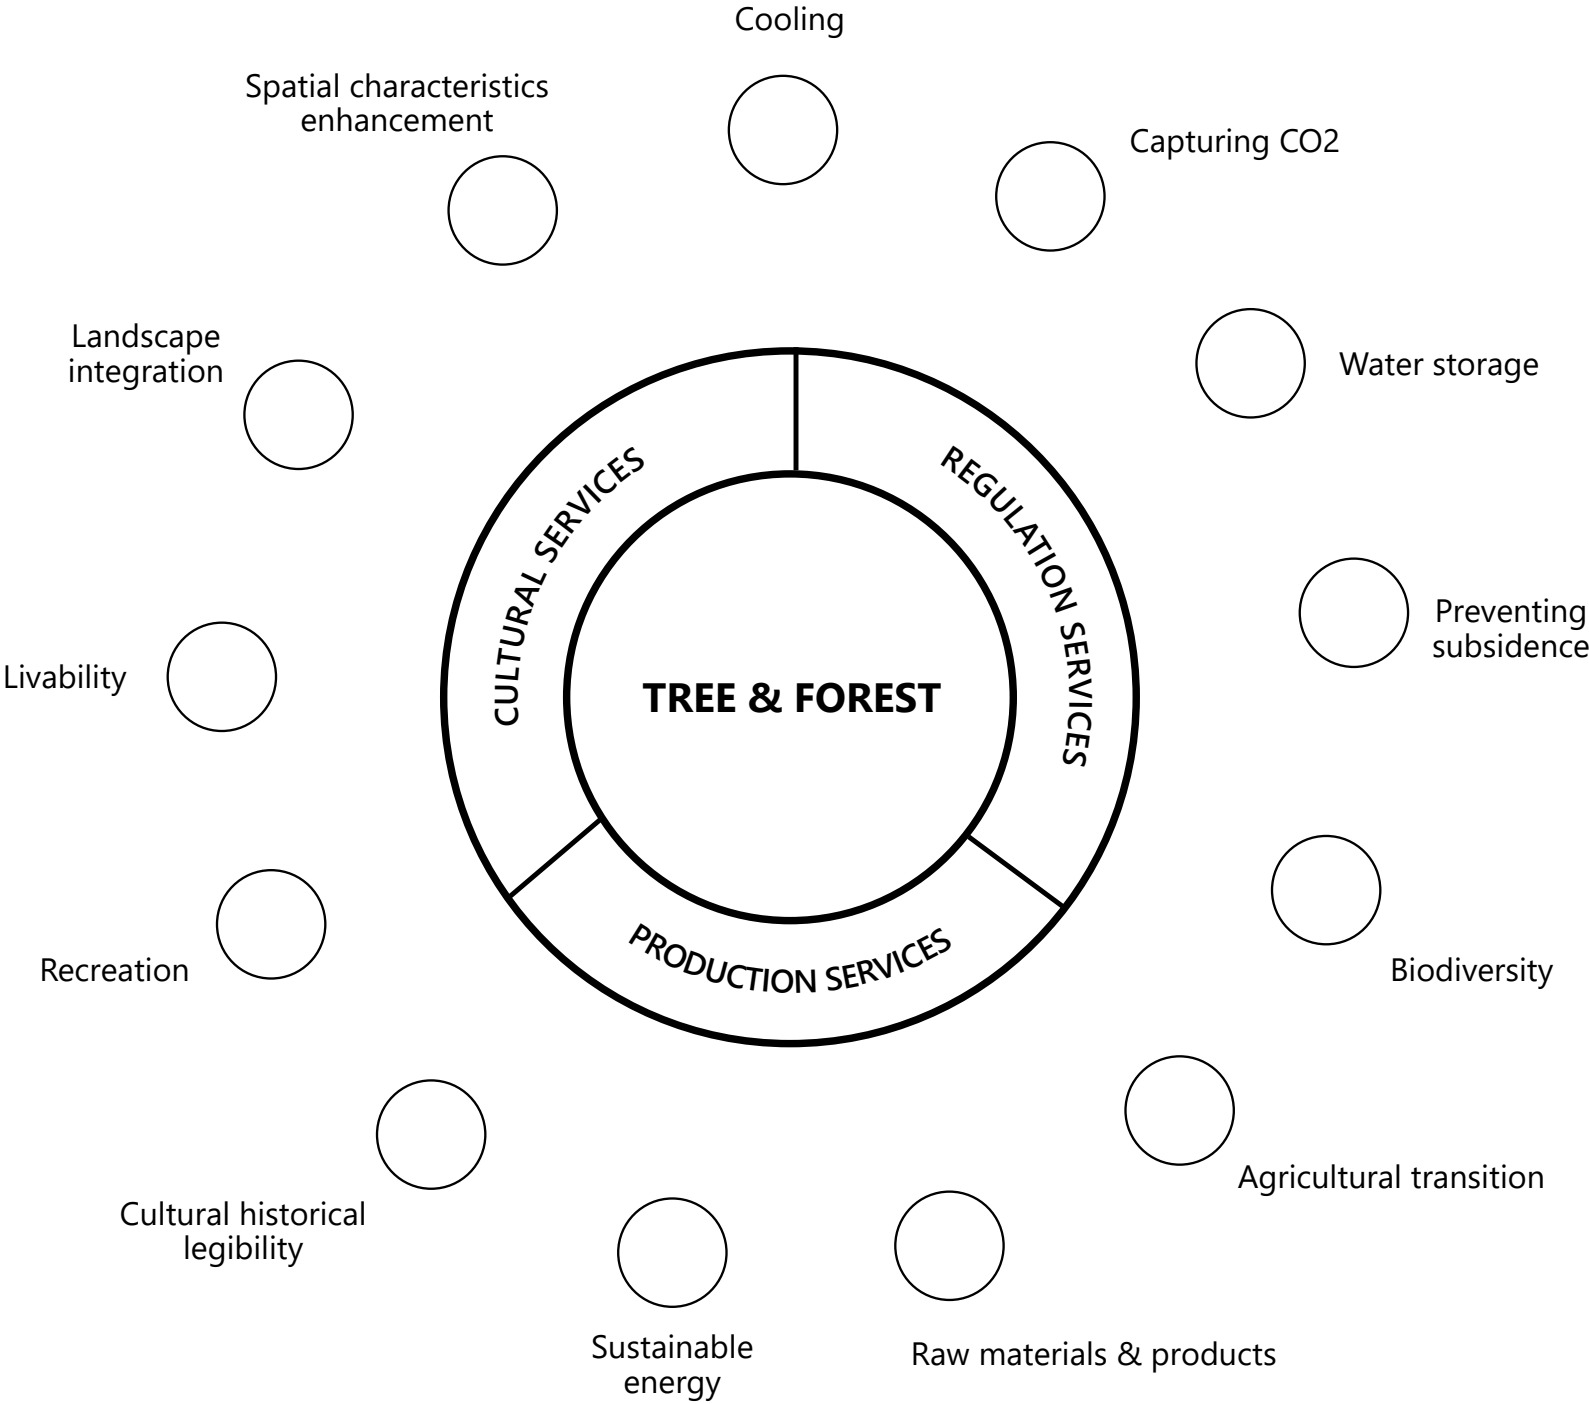

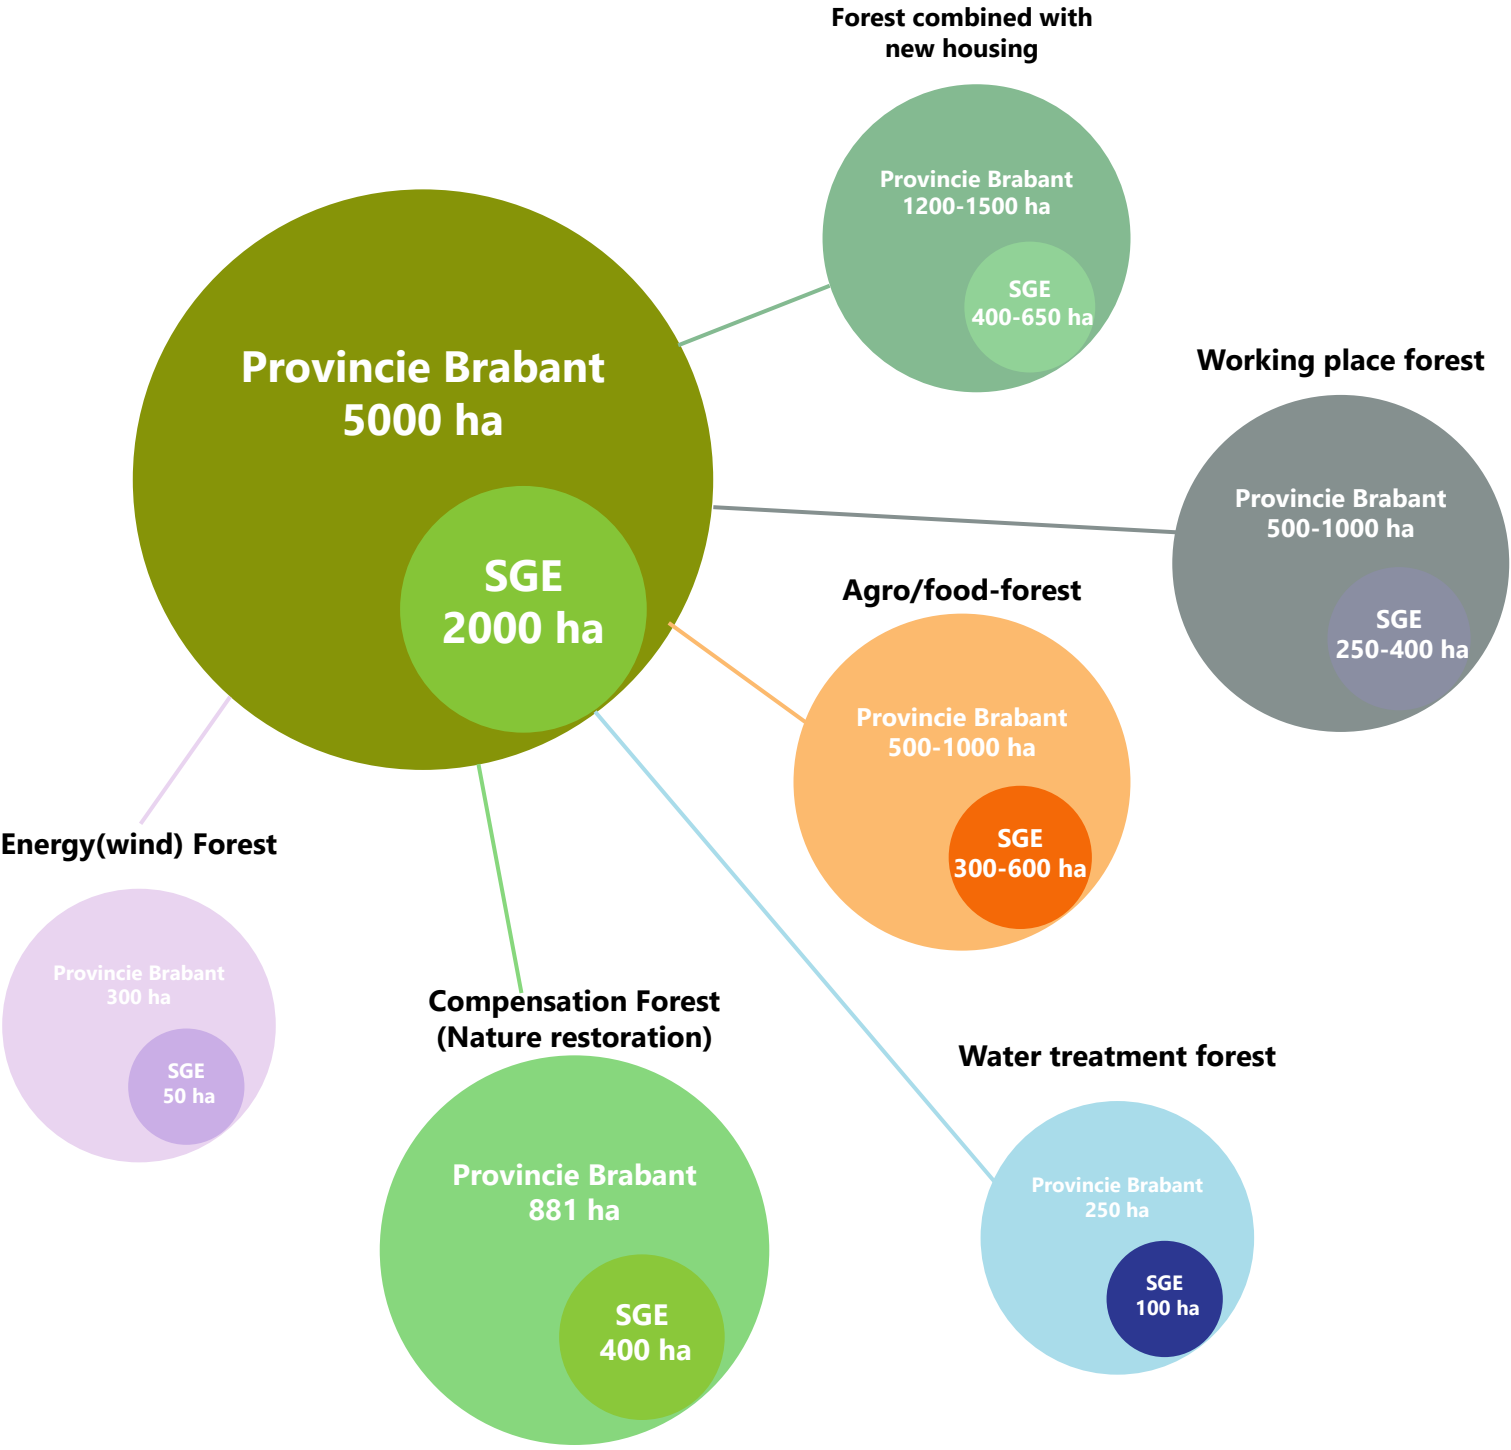

*SGE - A landscape of forest*

**SGE - A landscape to be afforestation**

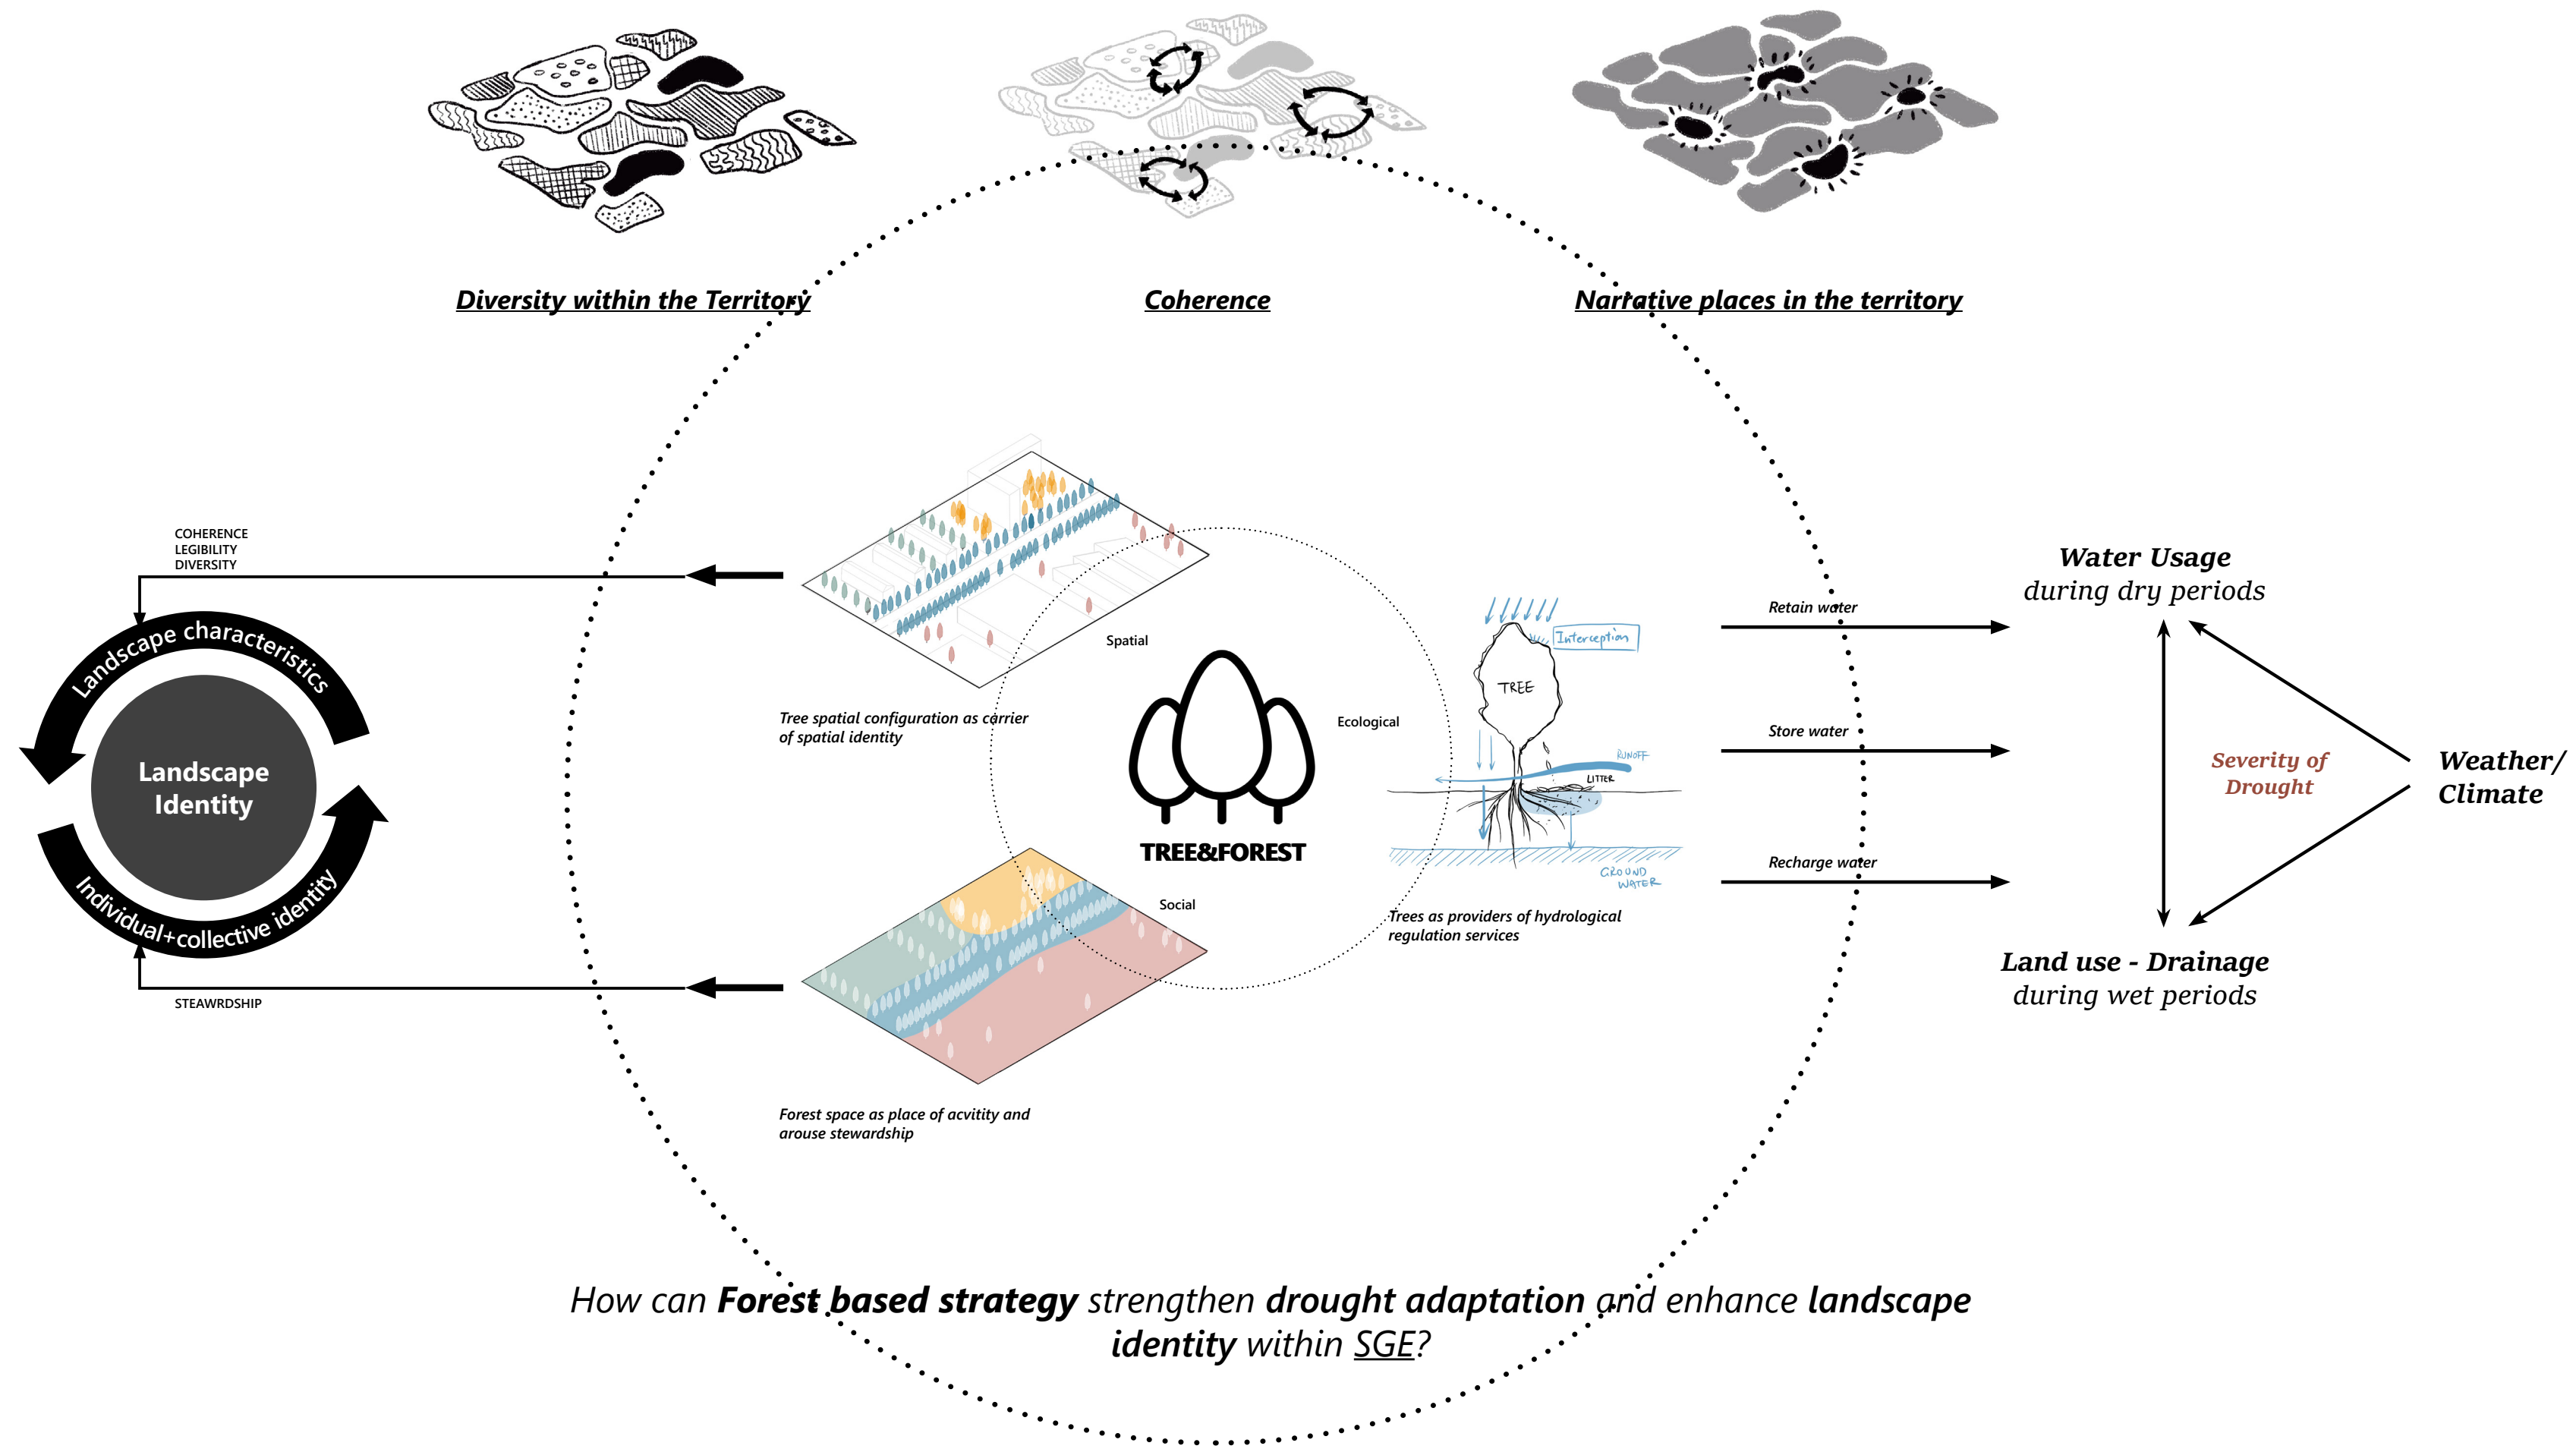

**Ecosystem services provided by forest and trees**

**Ambitions of afforestation within NB and SGE**

# The Forest Approach

# The tree language of SGE - Species as vocabulary

## Reclaimed forest

*Pinus sylvestris*

*Picea abies*

*Fagus sylvatica*

*Alnus glutinosa*

*Fraxinus excelsior*

*Salix alba*

*Quercus robur*

*Betula pendula*

*Quercus palustris*

*Platanus hispanica*

*Populus euramericana*

*Carpinus betulus*

*Ulmus hollandica*

*Tilia europaea*

*Acer pseudoplatanus*

*Acer platanoides*

*Acer rubrum*

*Tilia cordata*

*Robinia pseudoacacia*

## Streamvalley & Broek

## Fringe landscape

## Reclaimed arable field

## Urban patchwork

# *The tree language of SGE - spatial configuration as syntax*

## 1. Point

### 1.1 Solitary

### 1.2 Threshold

### 1.3 Pavilion

## 2. Line

### 2.1 Open row

### 2.2 Colonade

### 2.3 Tree wall

### 2.4 Curtain

### 2.5 Arcade

### 2.6 Hedge wall

### 2.7 Screen

### 4.5 Transparent room

### 4.6 Closed room

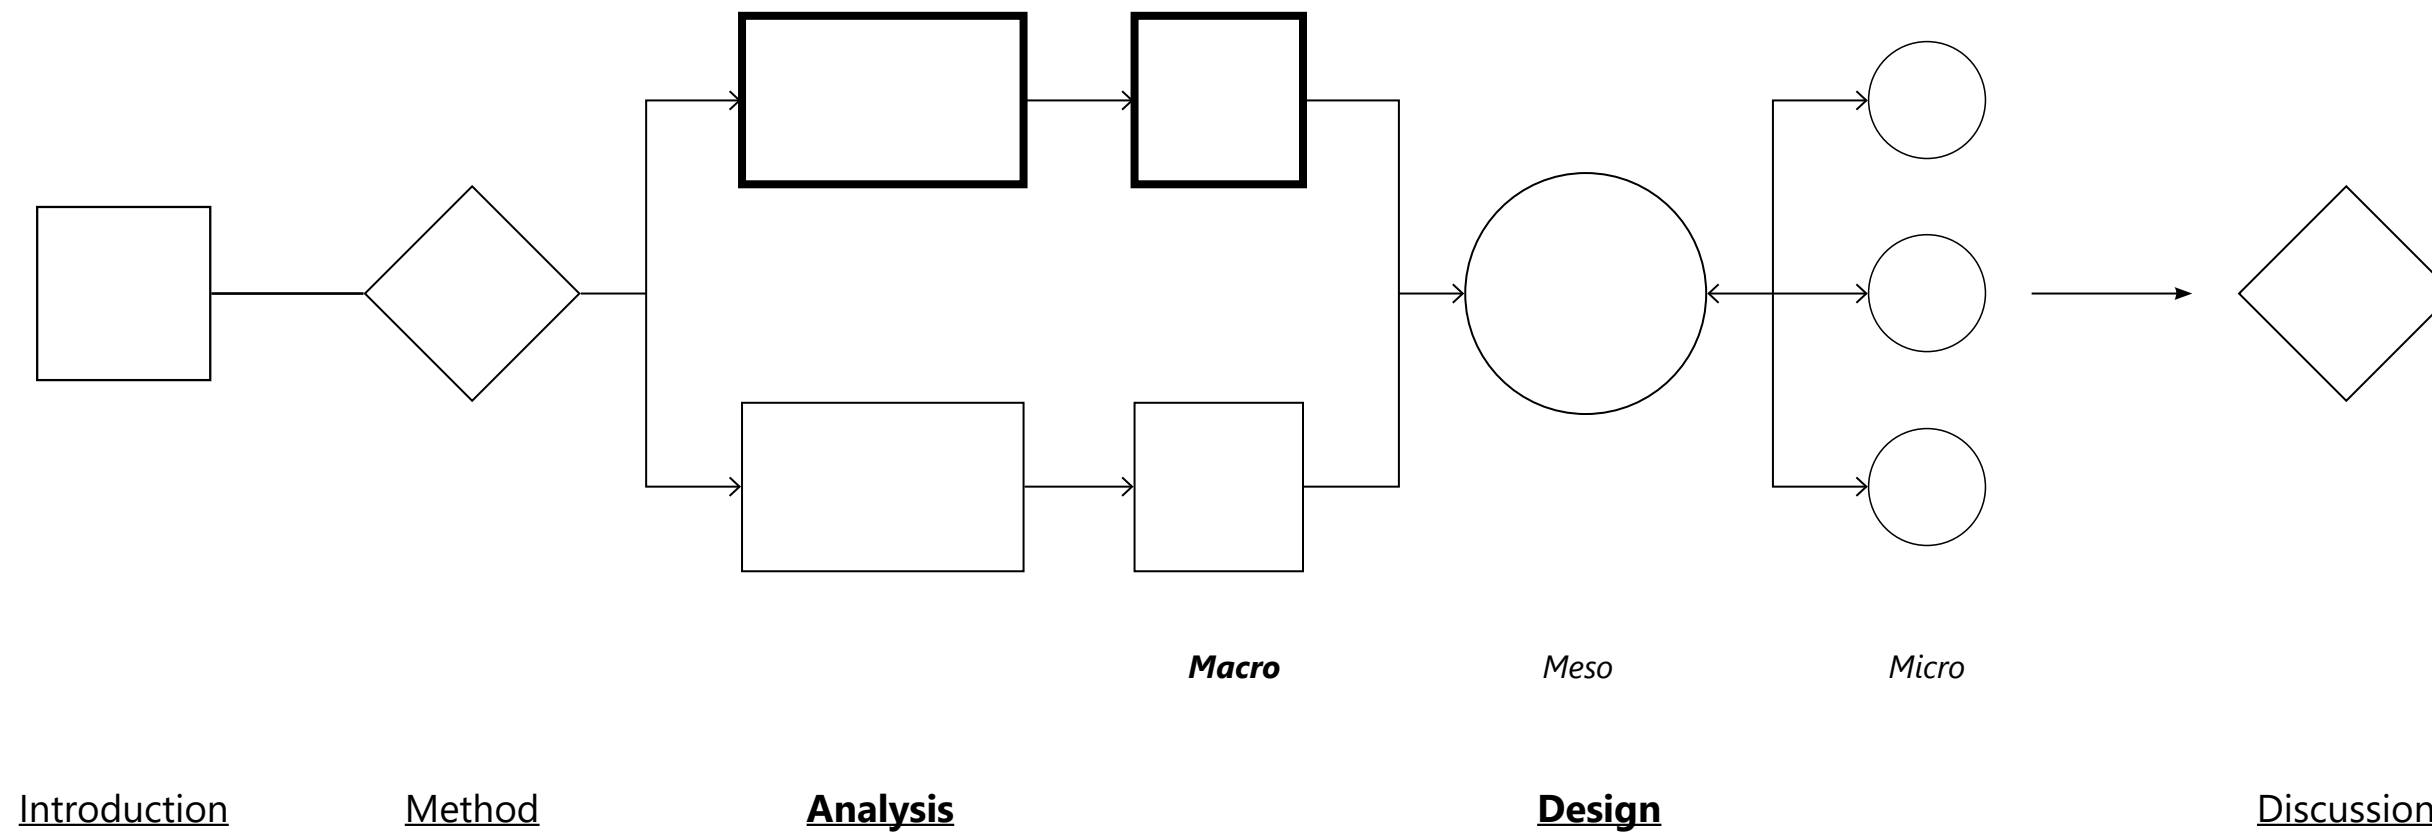

## ***SubRQ***

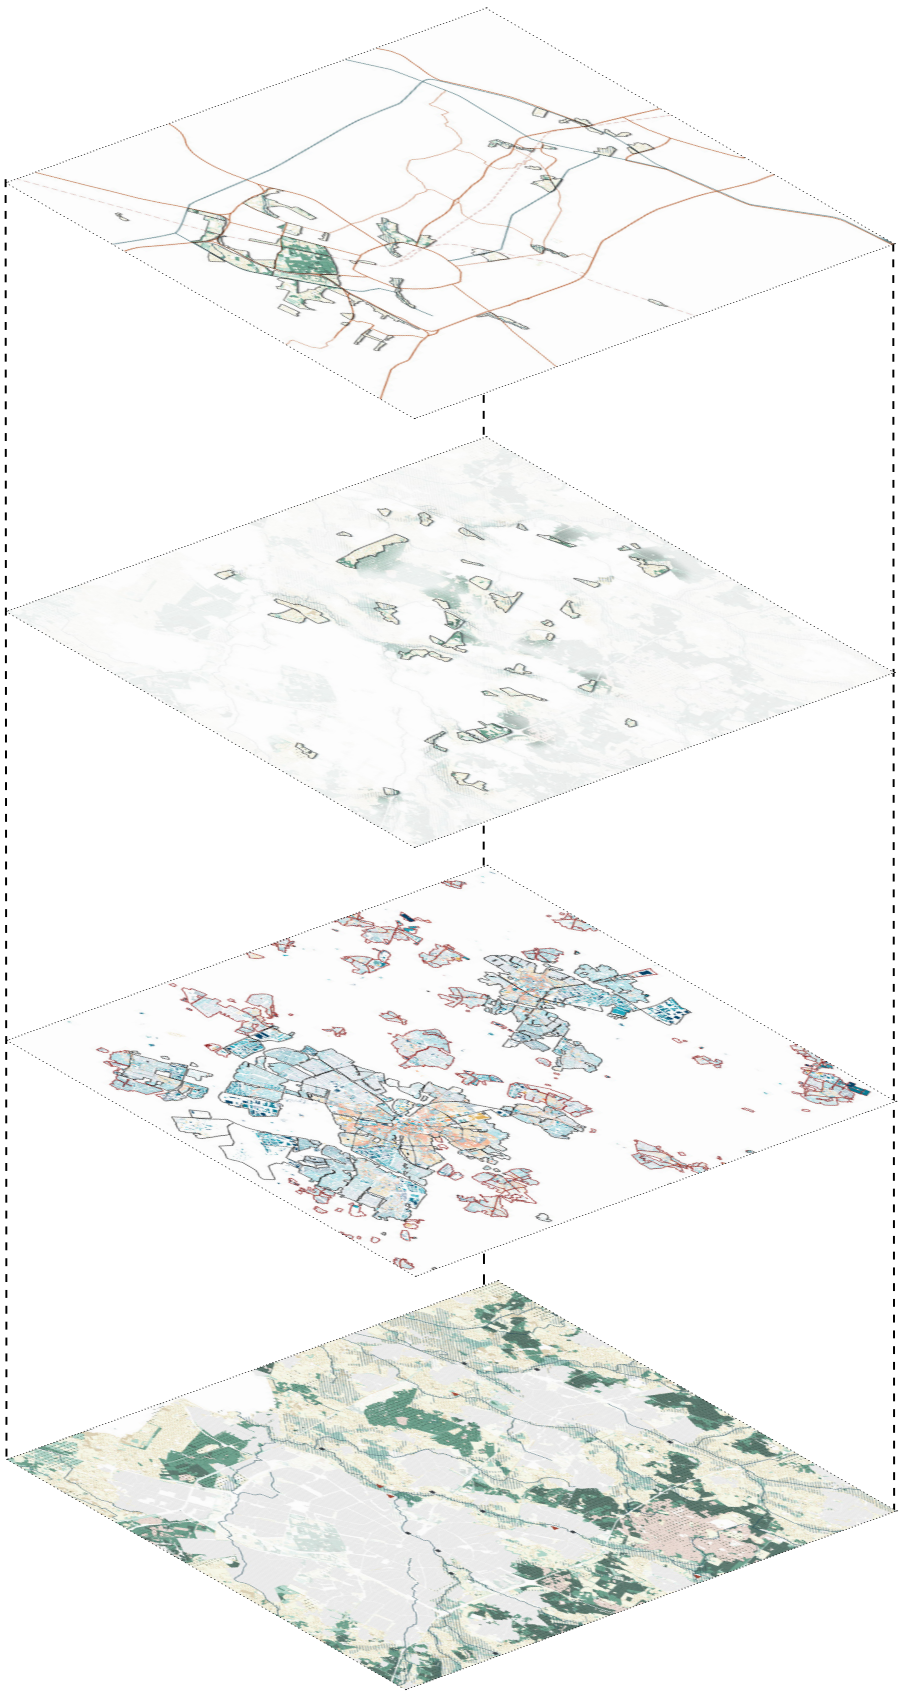

*What are the challenges and opportunities of enhancing **landscape identity** within SGE  
from the lens of forest and forestry?*

*What kind of forest based strategy can enhance and reinvent the **landscape identity** within  
SGE?*

***The components of SGE metropolitan landscape***

***The metropolitan void landscape***

*The "narrative places" of metropolitan landscape  
Important for regional legibility*

***The fringe landscape***

*Transitional zone  
Important for spatial coherence*

***The urbanization patches***

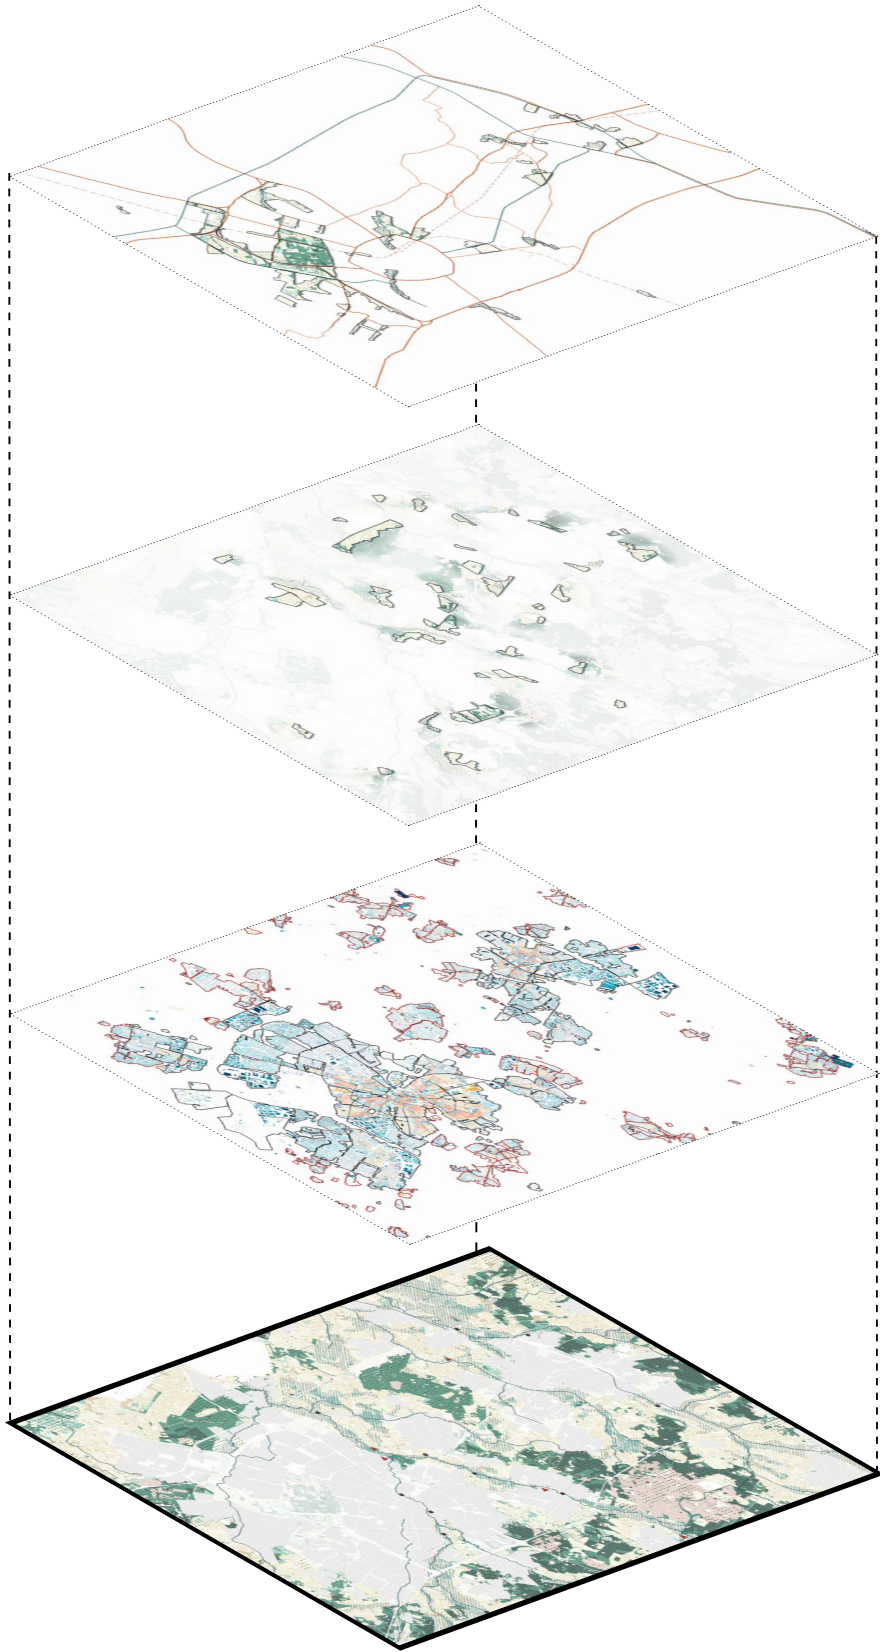

*Diverse livability in new urban forest*

***The reclaimed landscape***

*Historical continuity and cultural heritage  
under pressure  
Protection and diversification with forest*

*The reclaimed landscape*

*The reclaimed forest complex*

*The StreamValley and Broek landscape*

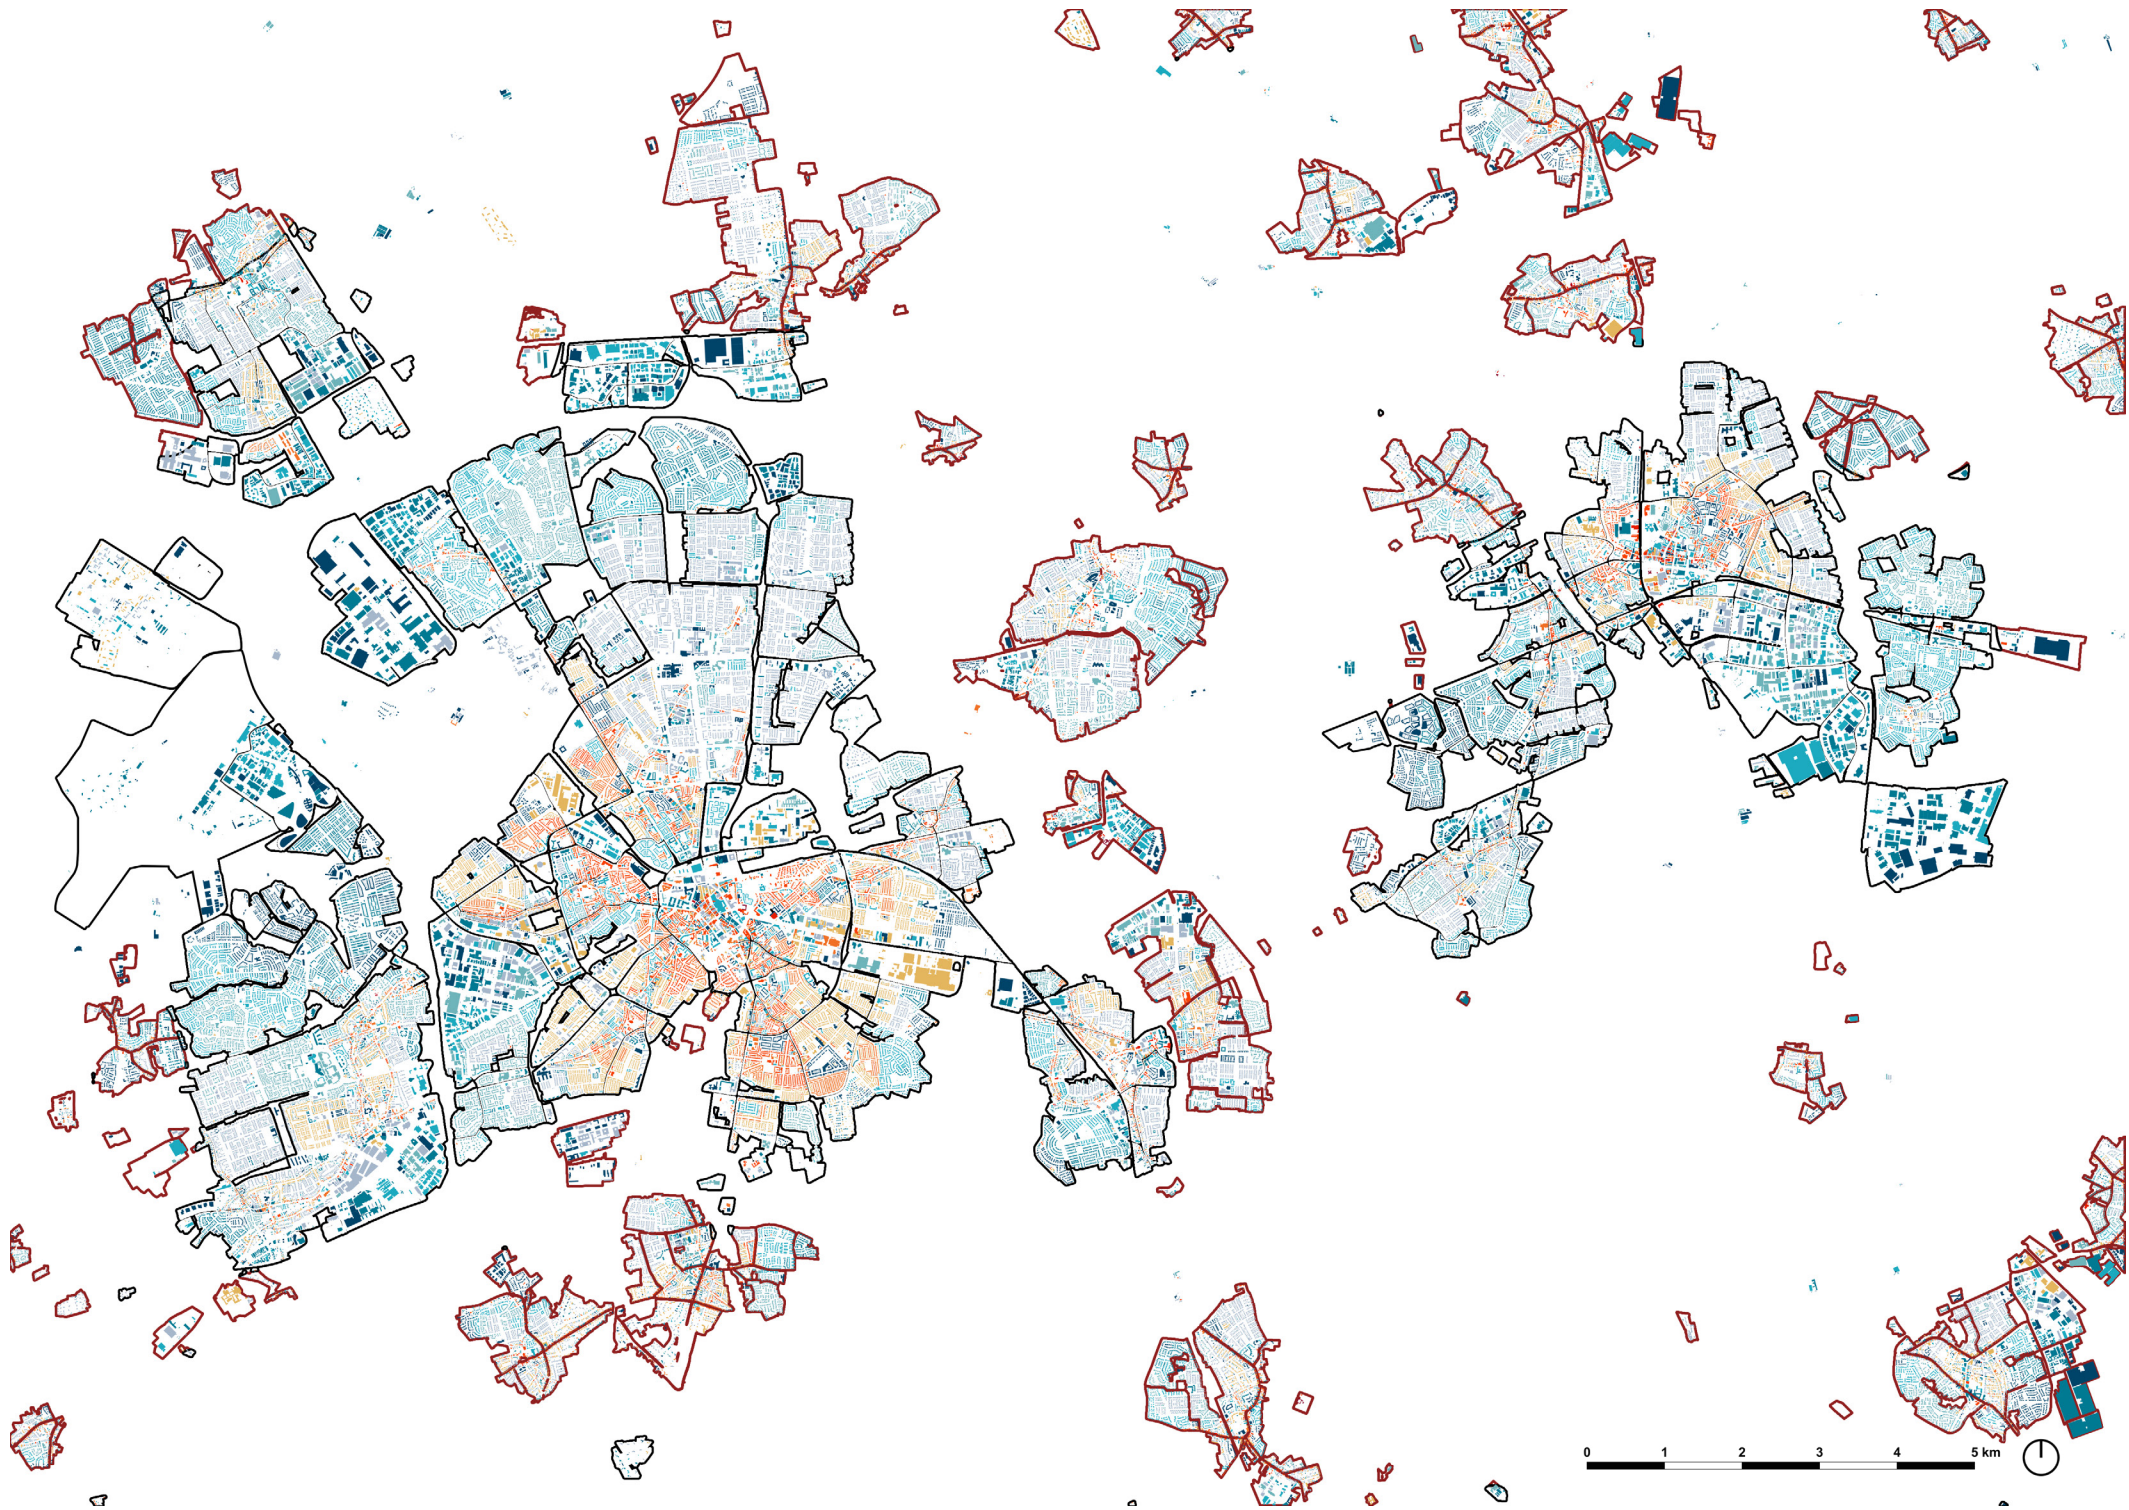

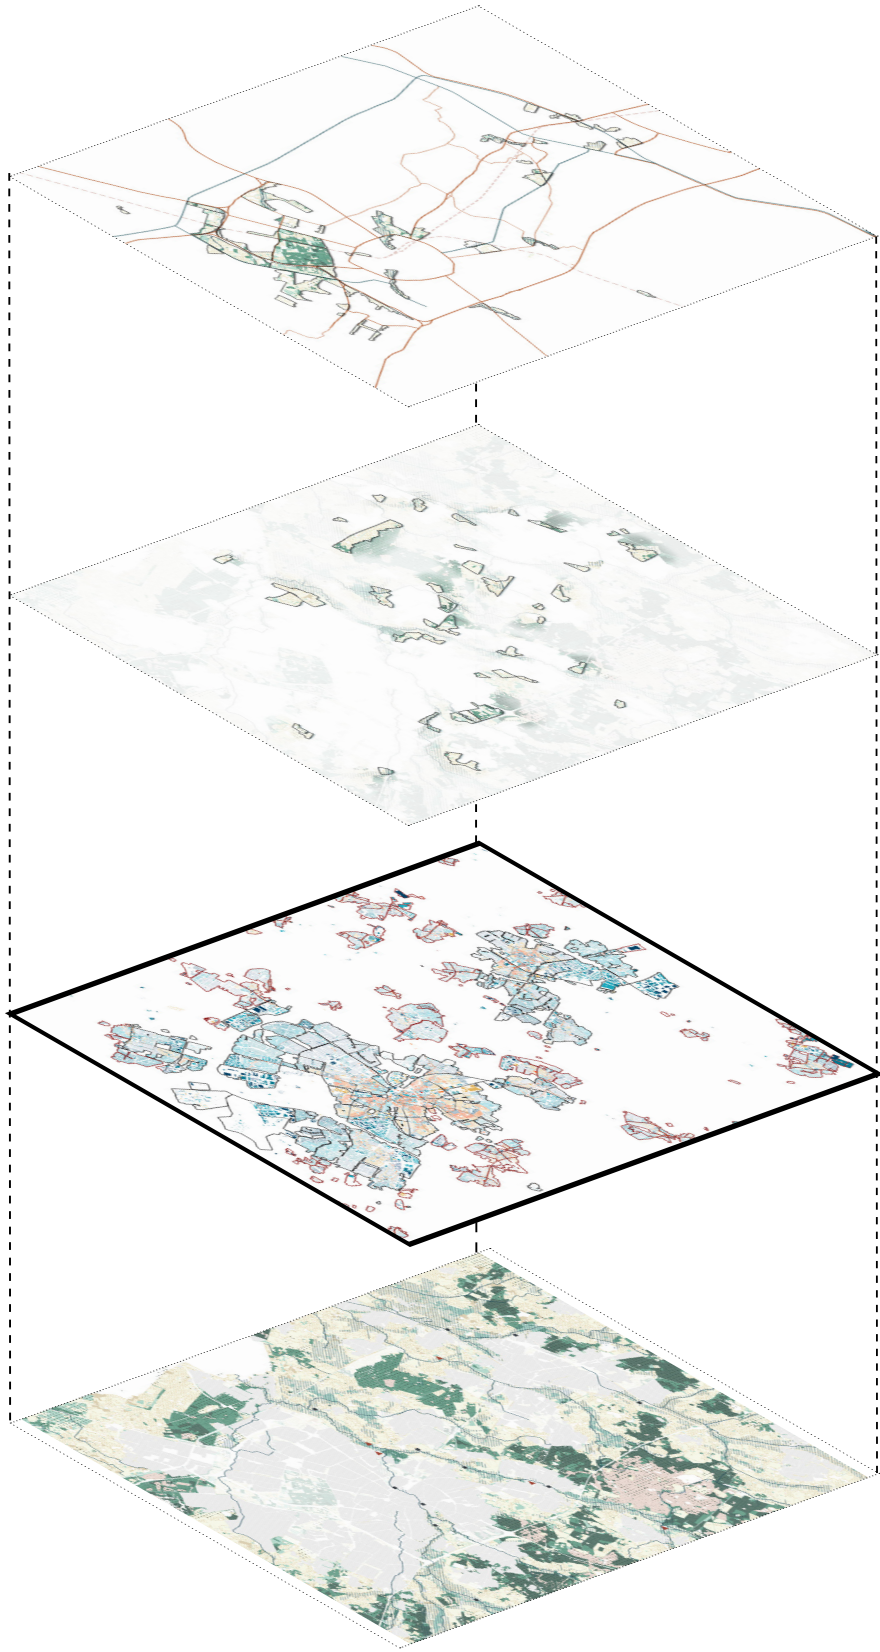

*The reclaimed arable fields*

*The urbanization patches*

□ large, continuous urban patchwork    □ Small, scattered patches

1. The scattered forest

2. The raster forest

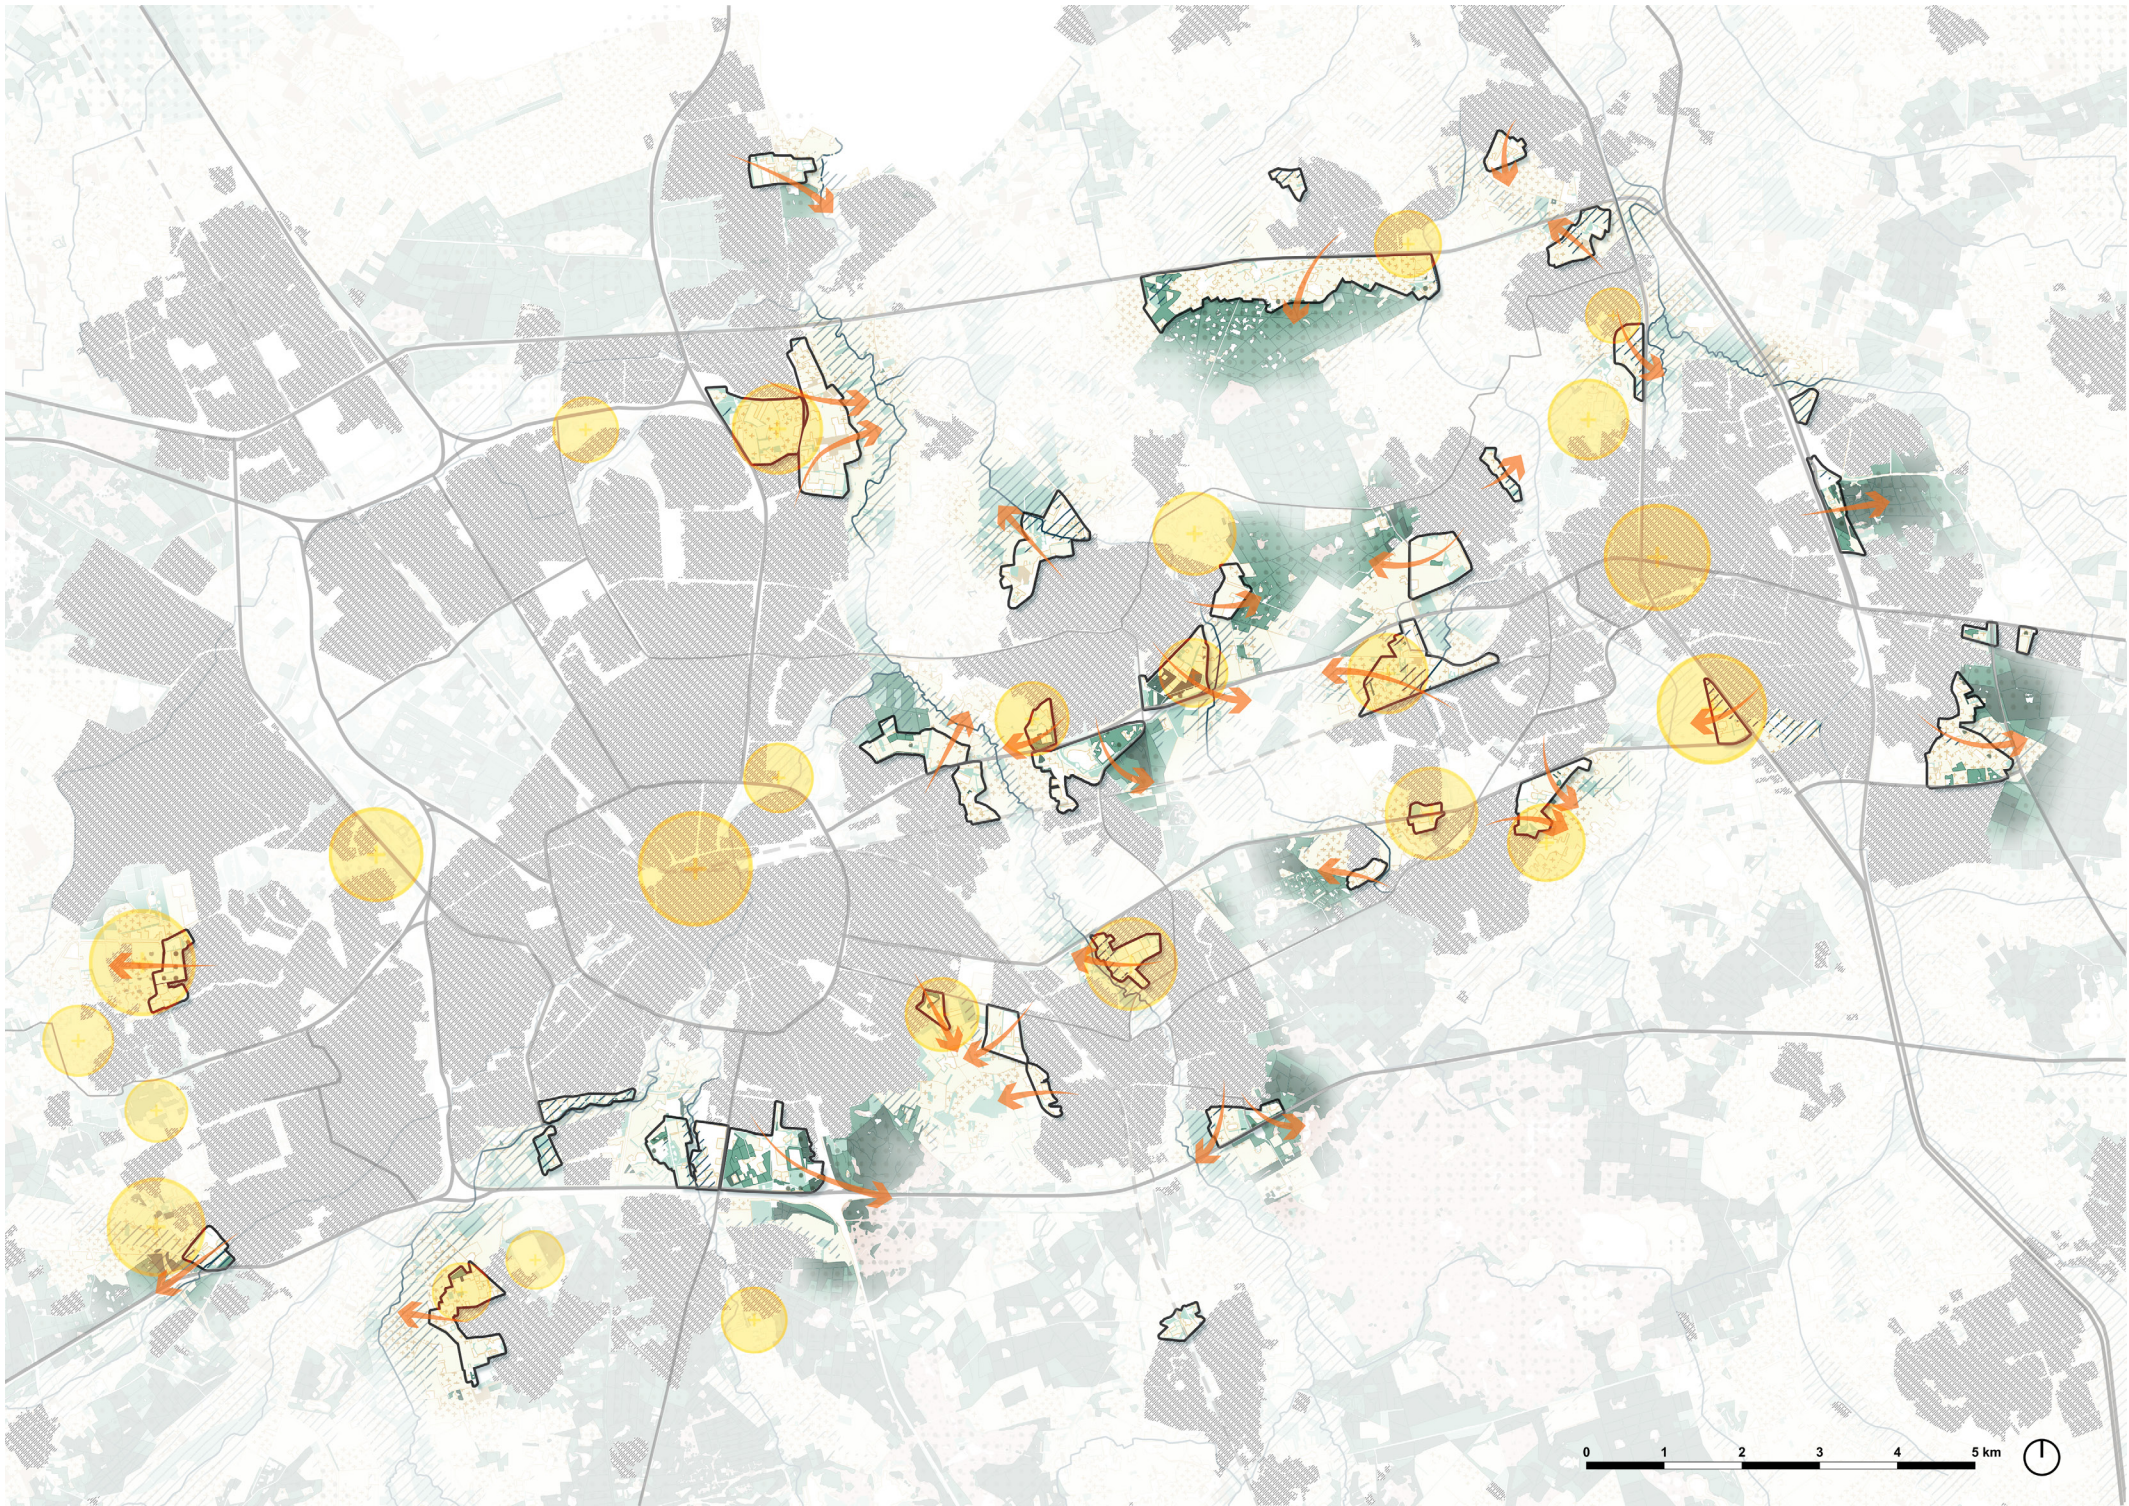

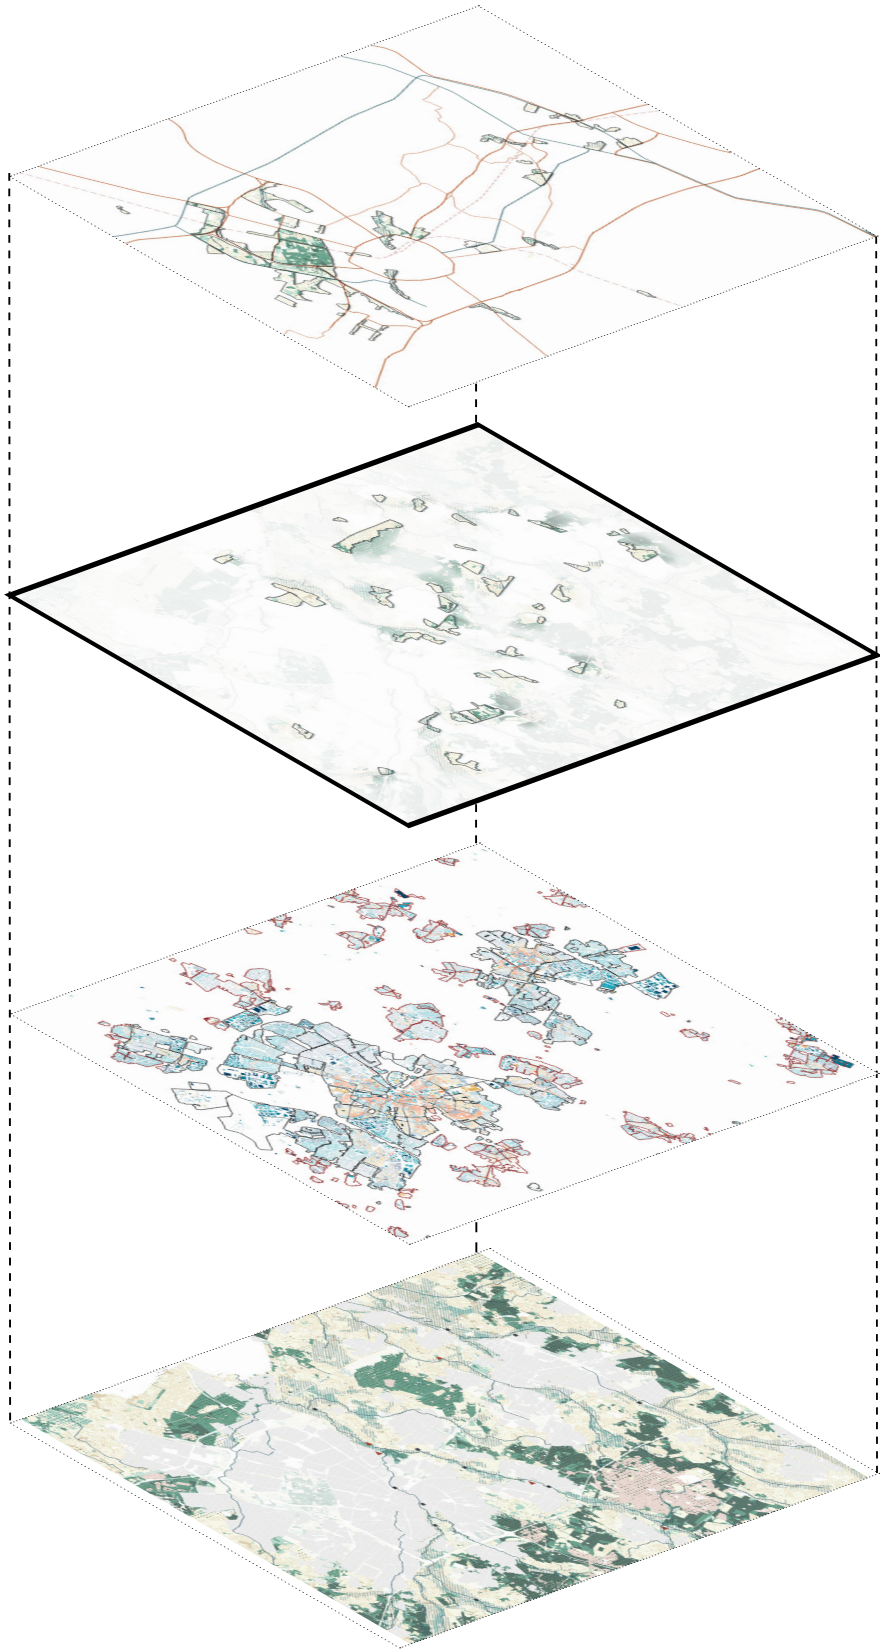

3. The stems forest

*The fringe landscape*

 The fringe landscape       From urban patches to cultural landscape       Housing assignment

## *The void landscape*

*Design principles for Enhancing landscape identity*

**Spatial Coherence and Narrativity**

**Multi-functionality**

**Engagement in the time process**

**Accessibility**

**Legibility and imageability**

*based on introducing/modifying tree syntax and transformation of forest pattern*

*Modify/introduce tree syntax*

*Forest pattern transformation*

**Complexity and diversity**

*based on introducing/inventing tree syntax*

*Invent new tree syntax*

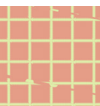

*Regional vision for landscape identity enhancement - A new forest territory*

*The reclaimed lanscape*

-  More diversified reclaimed forests
-  Forest necklace on the agricultural land
-  More readable and diversified broek landscape
-  More readable and experienceable stream valley

*The urbanization patches*

-  Transformation to the new stems forest
-  Transformation to the new raster forest

*The fringe landscape*

-  The fringe landscapes as transition zone

*The void landscape*

-  The canal as corridor connecting voids
-  A stream fragment
-  Various theatre voids

*Design strategies for landscape identity enhancement - A new forest toolbox*

*The metropolitan void landscape*

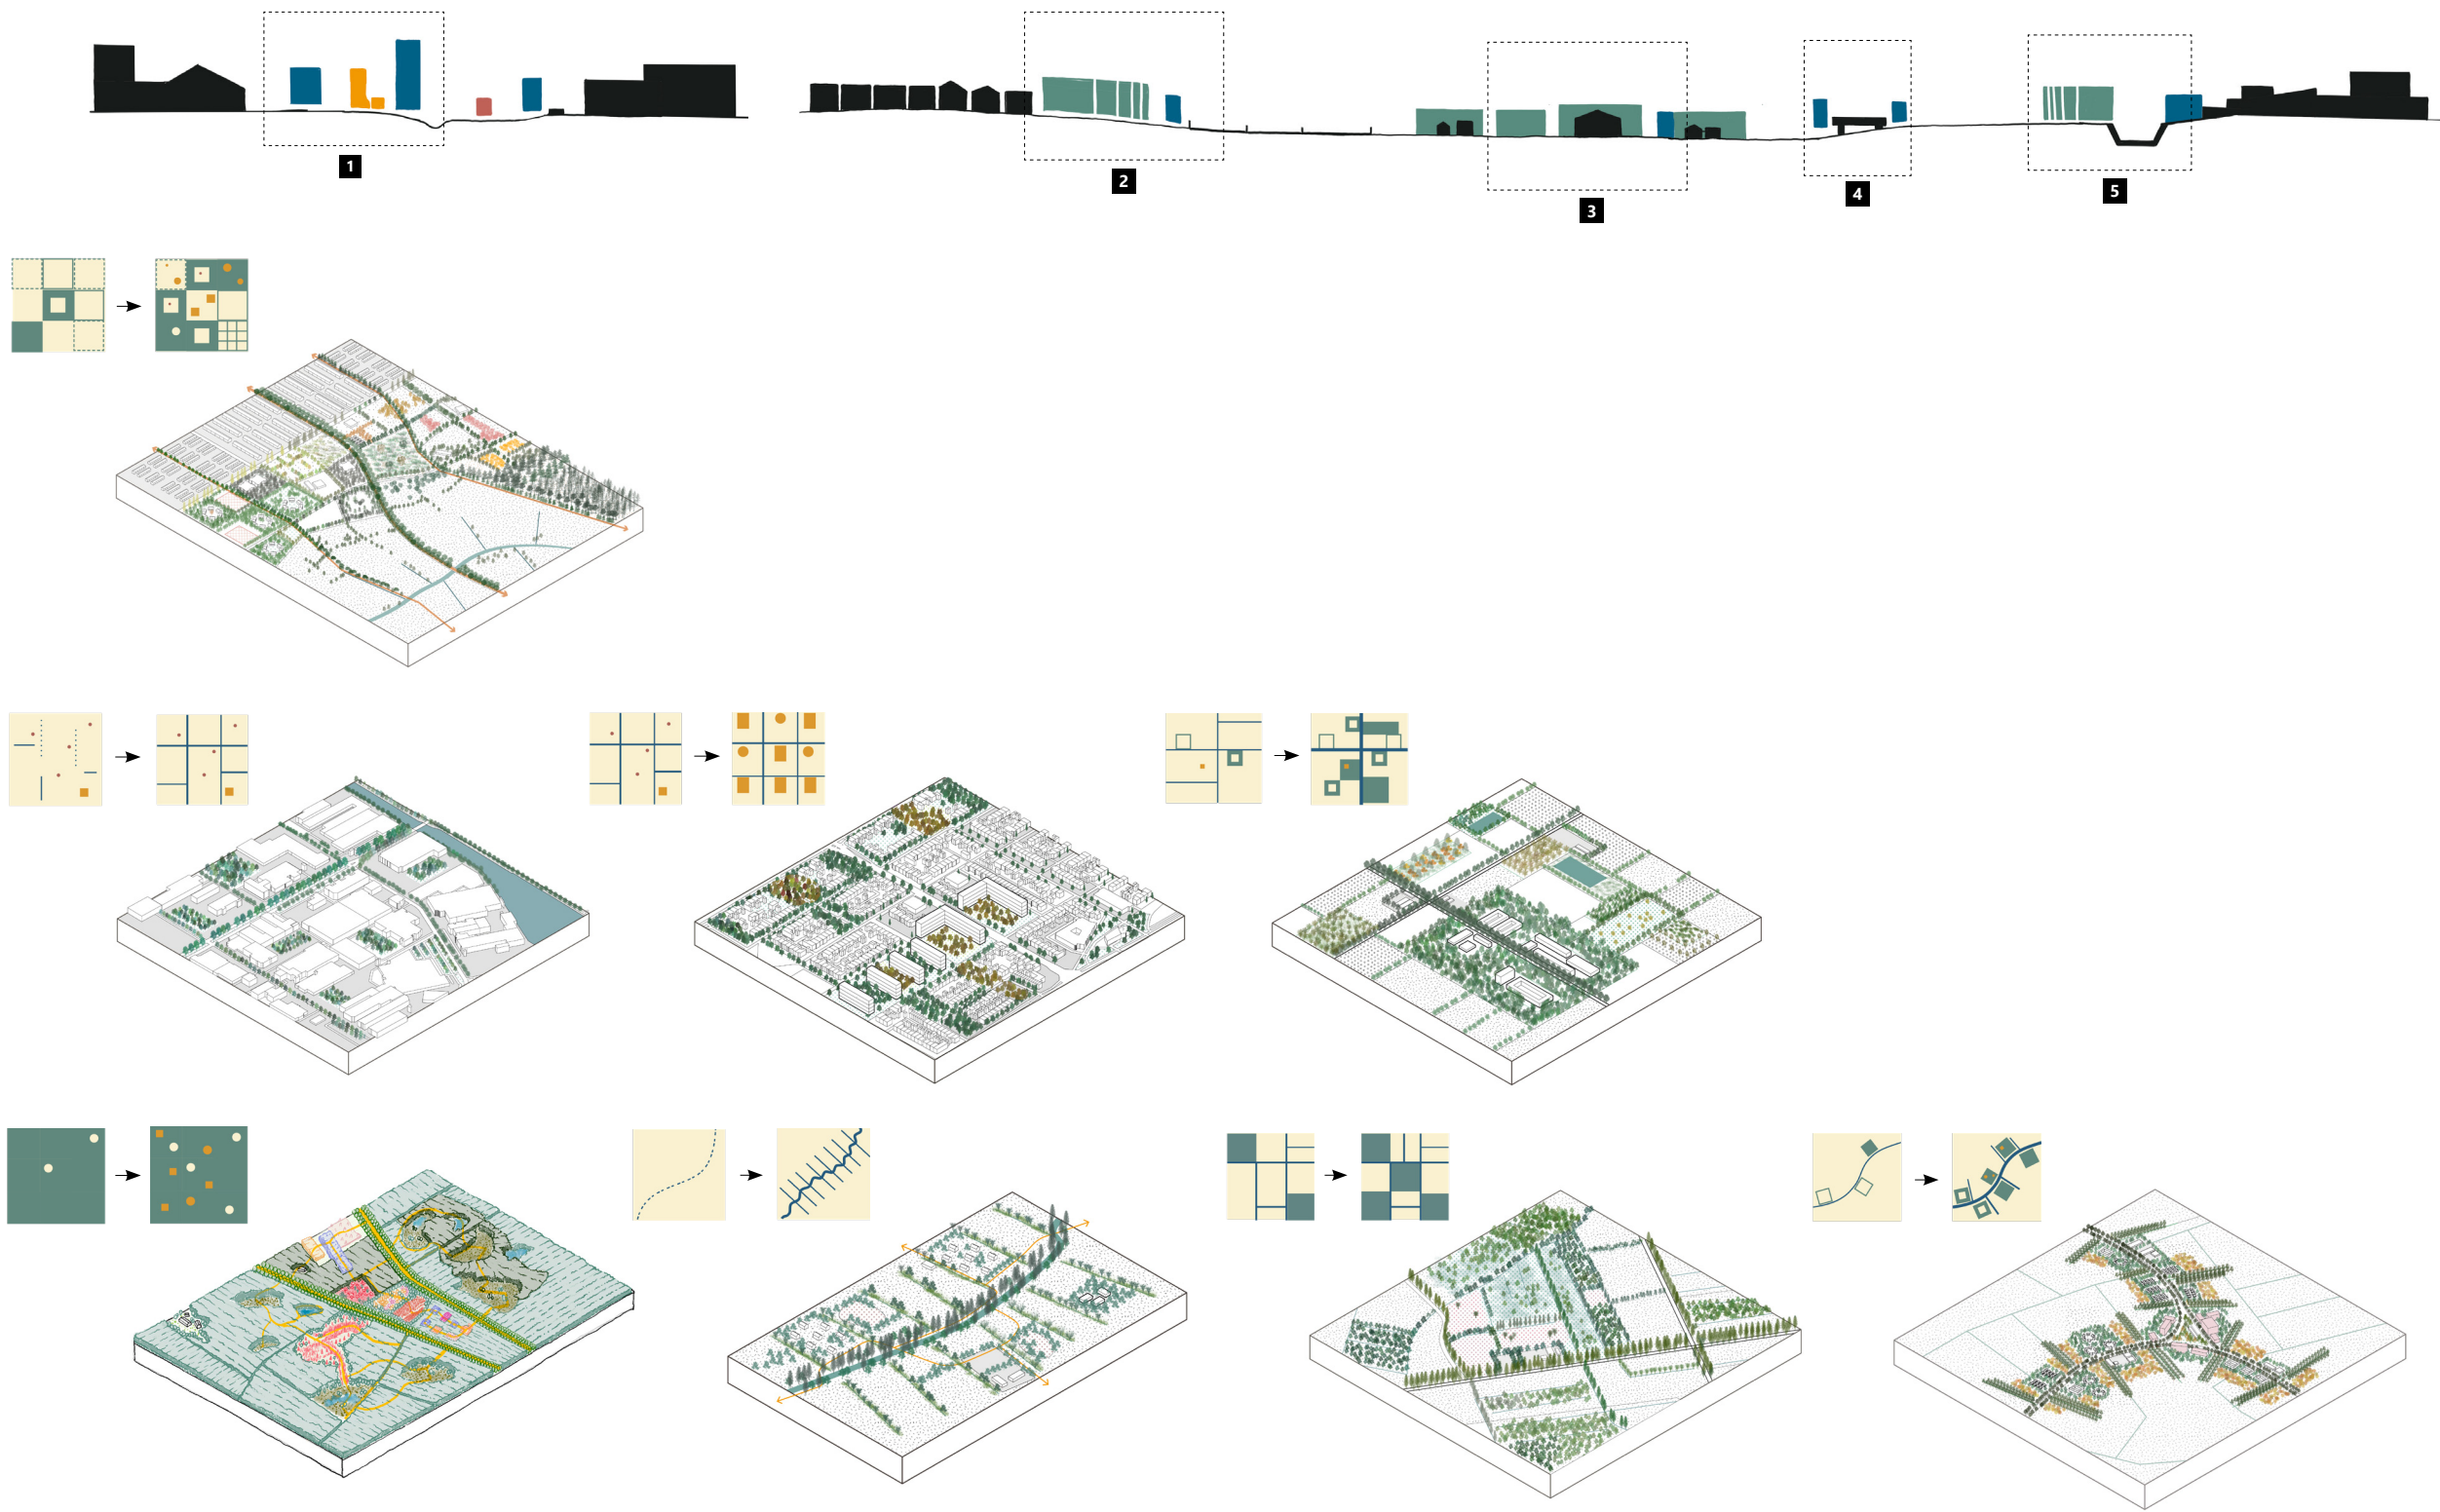

*The fringe landscape*

*The urbanization patches*

*The reclaimed landscape*

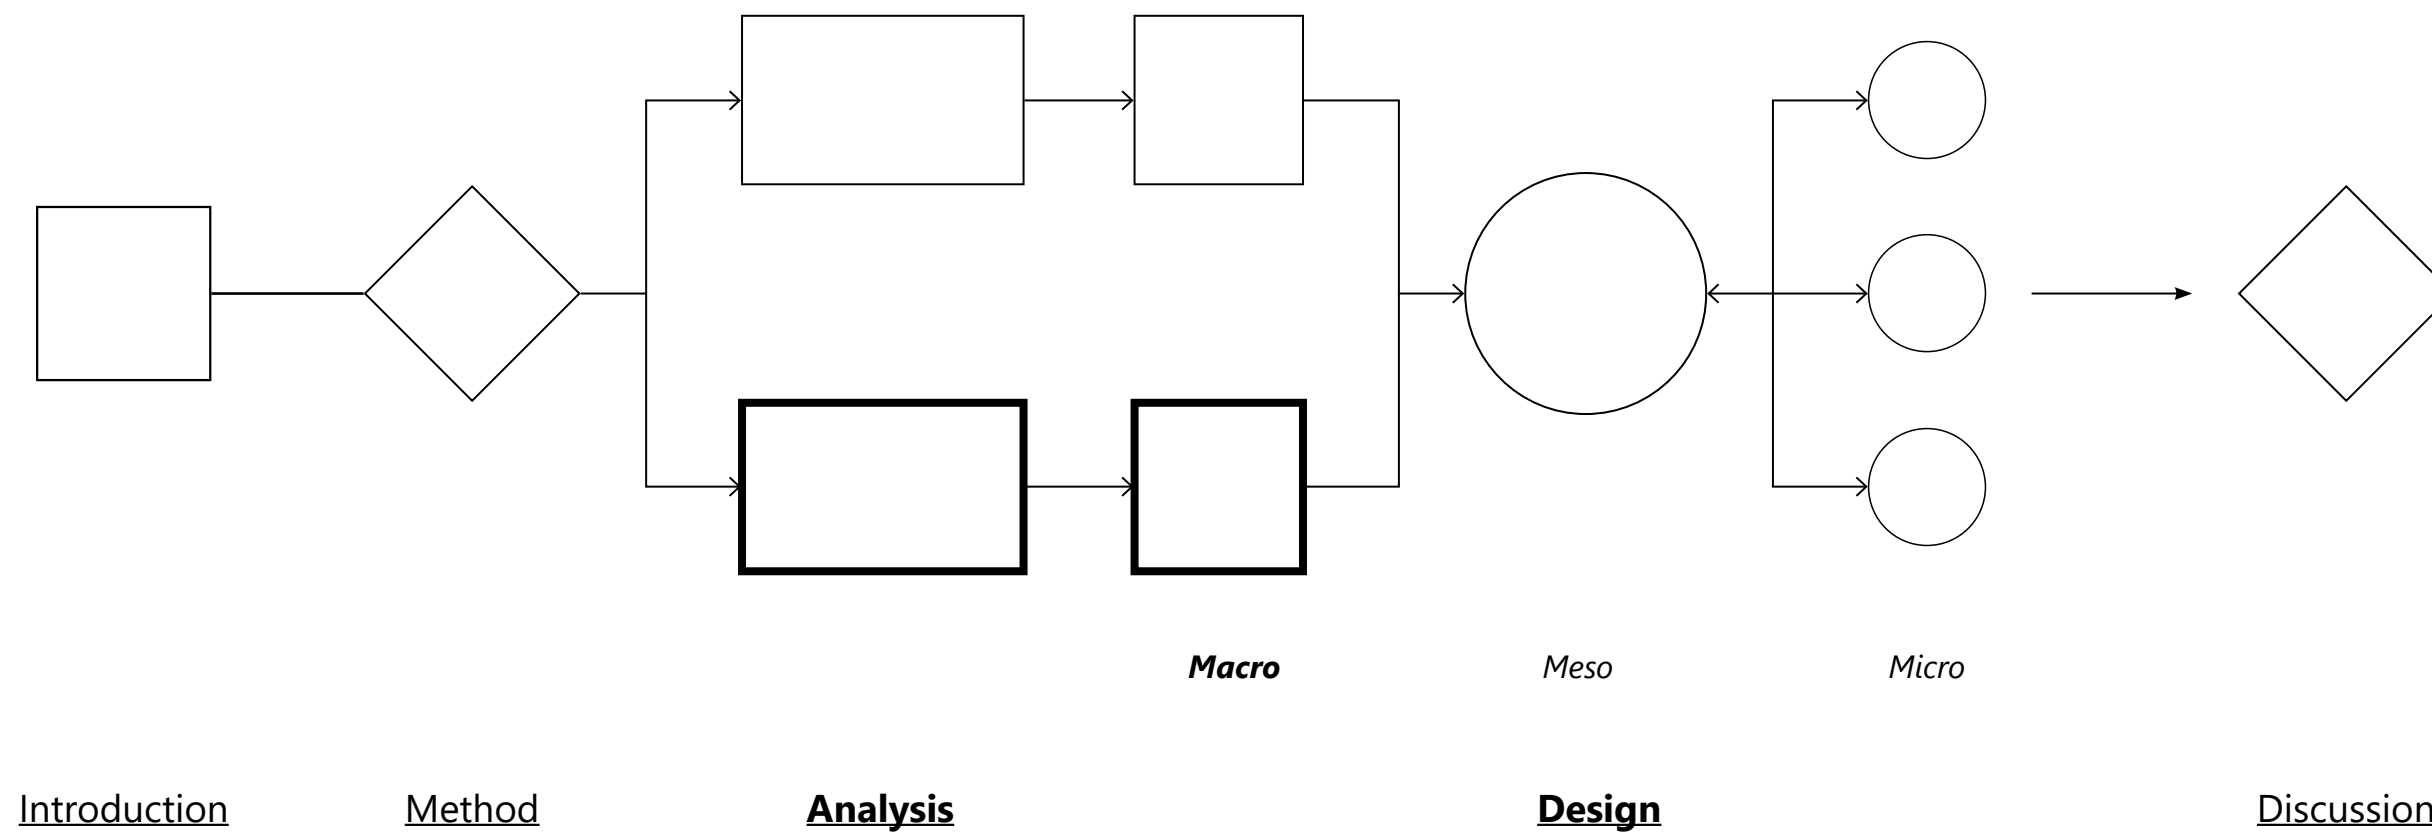

## SubRQ

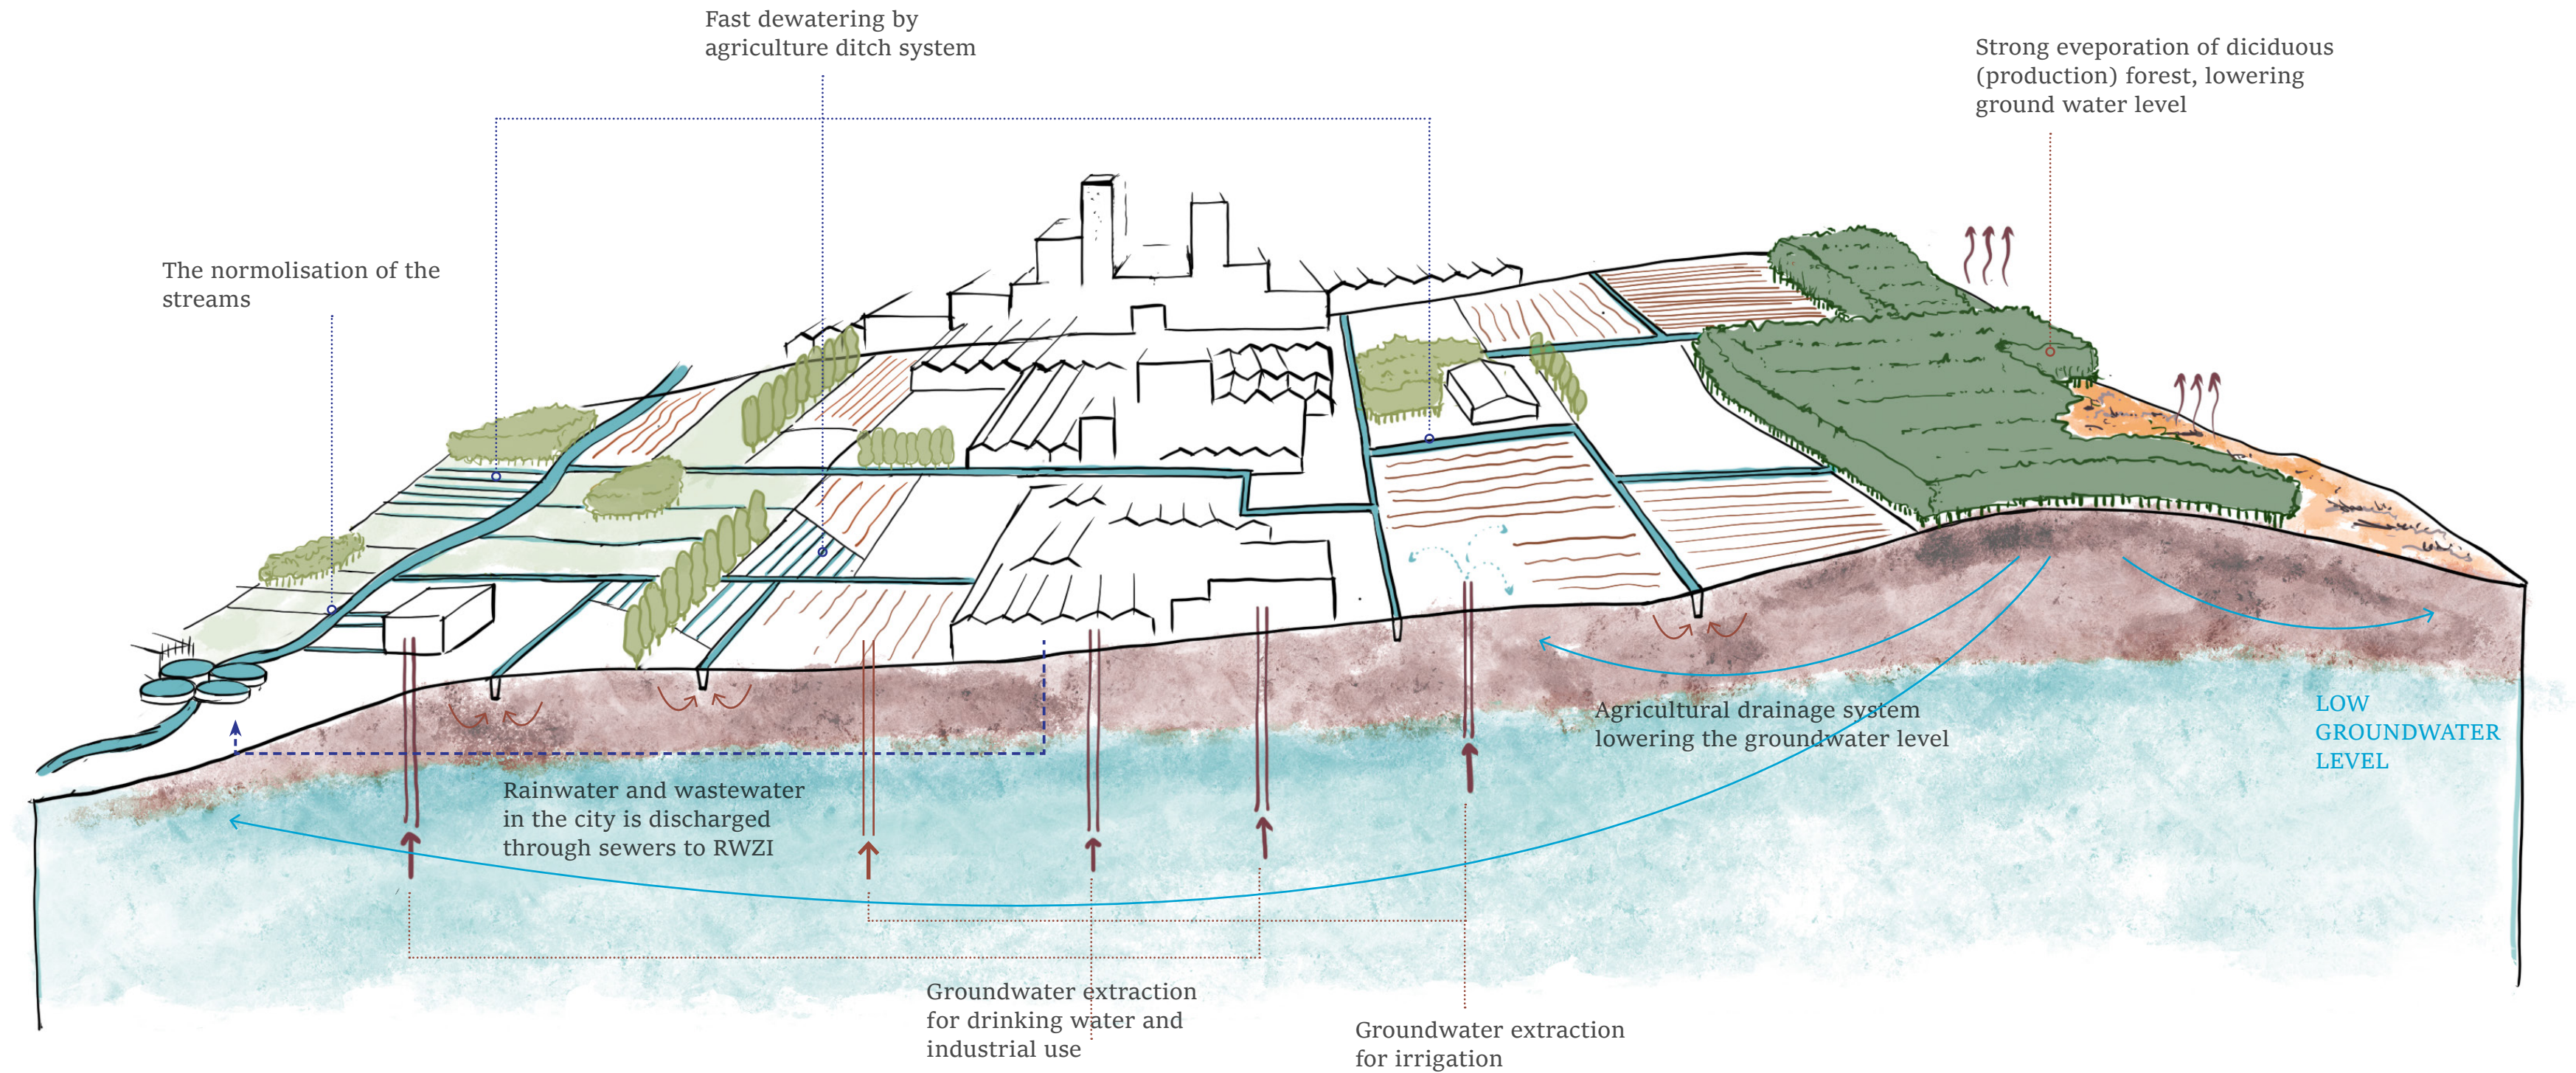

What are the challenges and opportunities of strengthening **drought-adaptation** within SGE from the lens of forest and forestry?

What kind of forest based strategy can strengthen the **drought-adaptation** within SGE?

## ***The components of SGE (ground)water system***

***The Valley***

***The Middleground***

***The Ridge***

## ***The components of SGE (ground)water system***

***The Ridge***

***The Middleground***

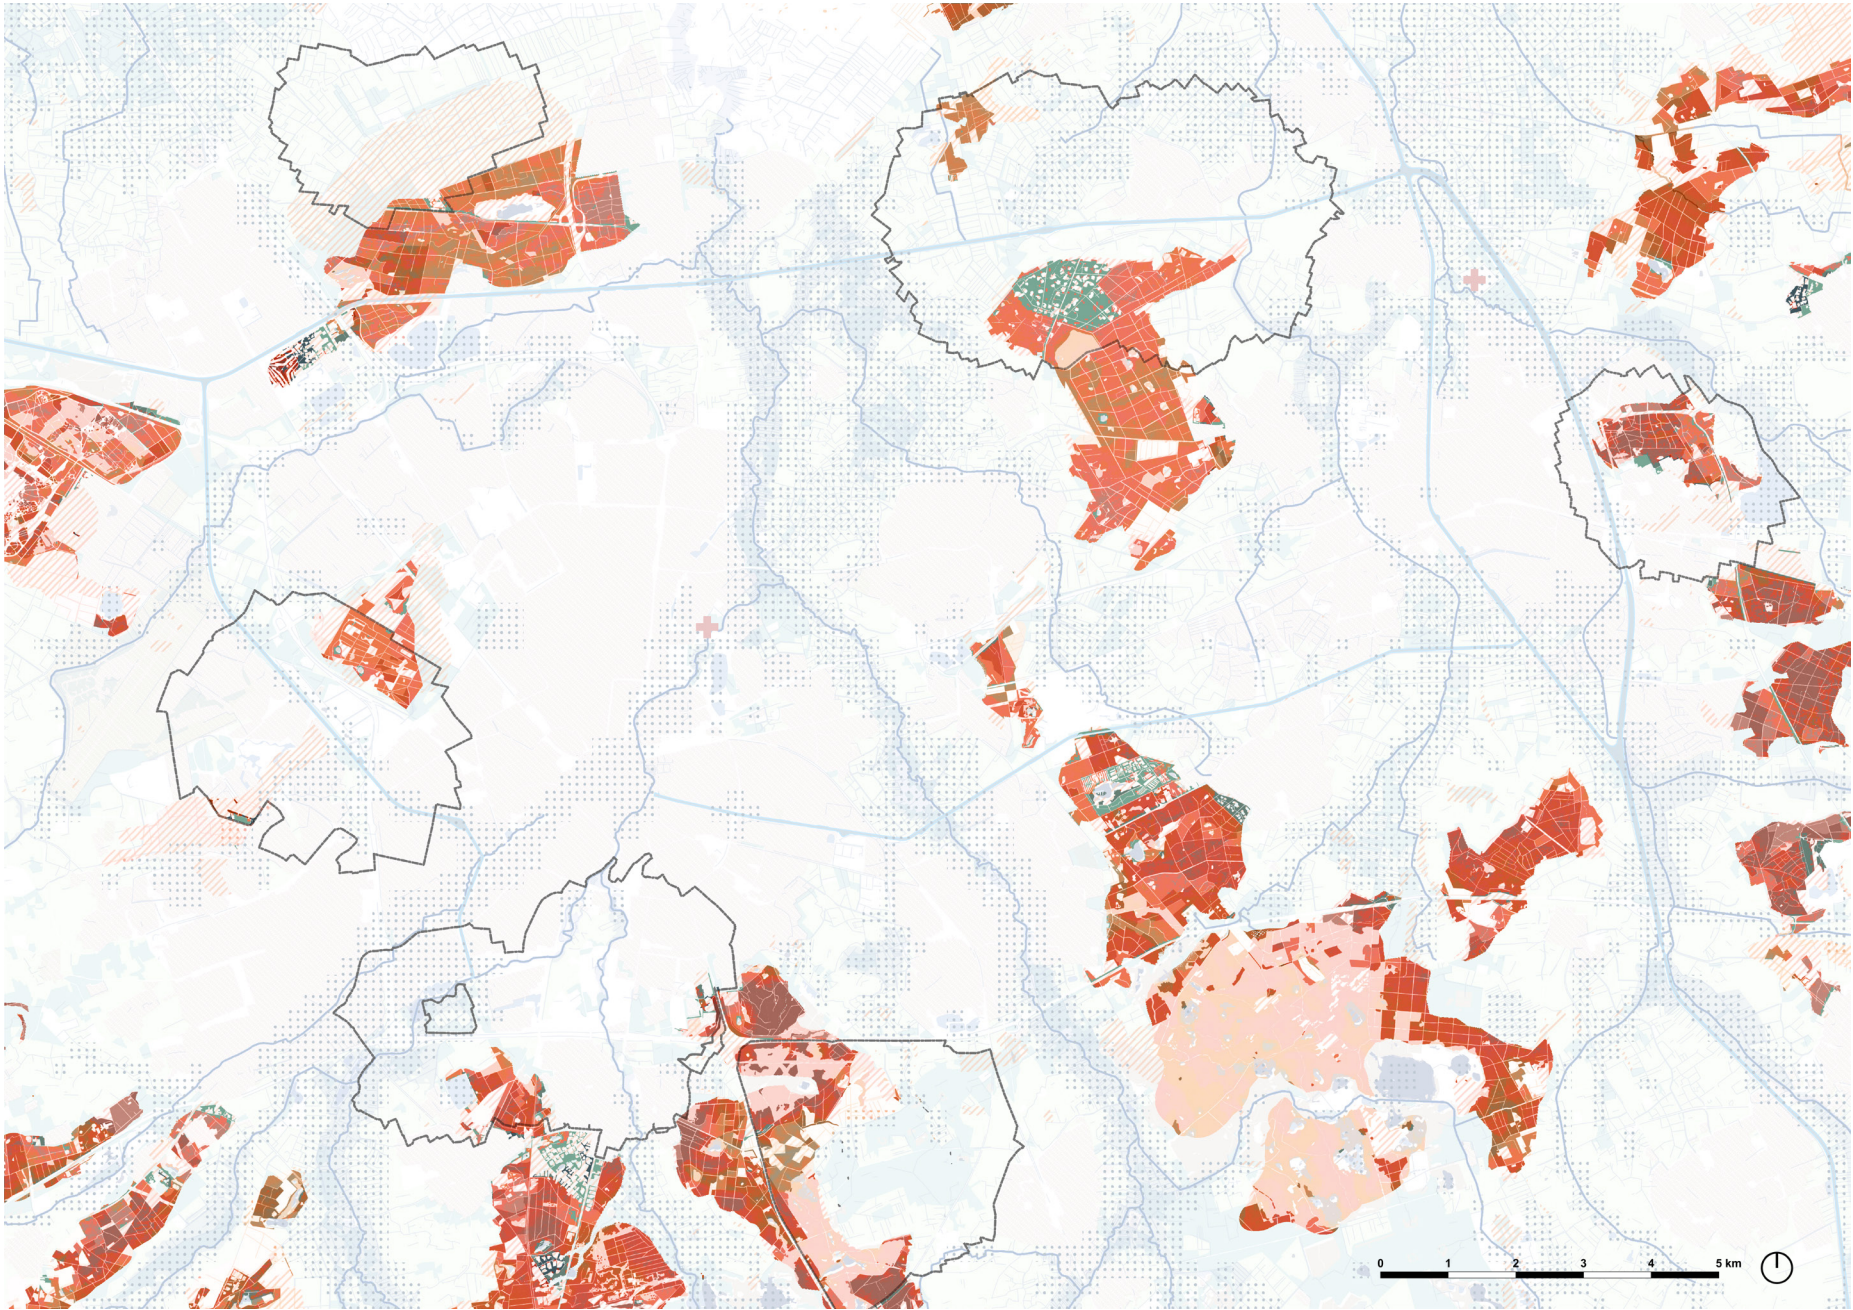

***The Valley***

(Ground) Water system - *The ridge*

- Coniferous forest
- Heathland
- Mixed forest
- Groundwater protection area

High evaporation

Rapid drainage

High transpiration

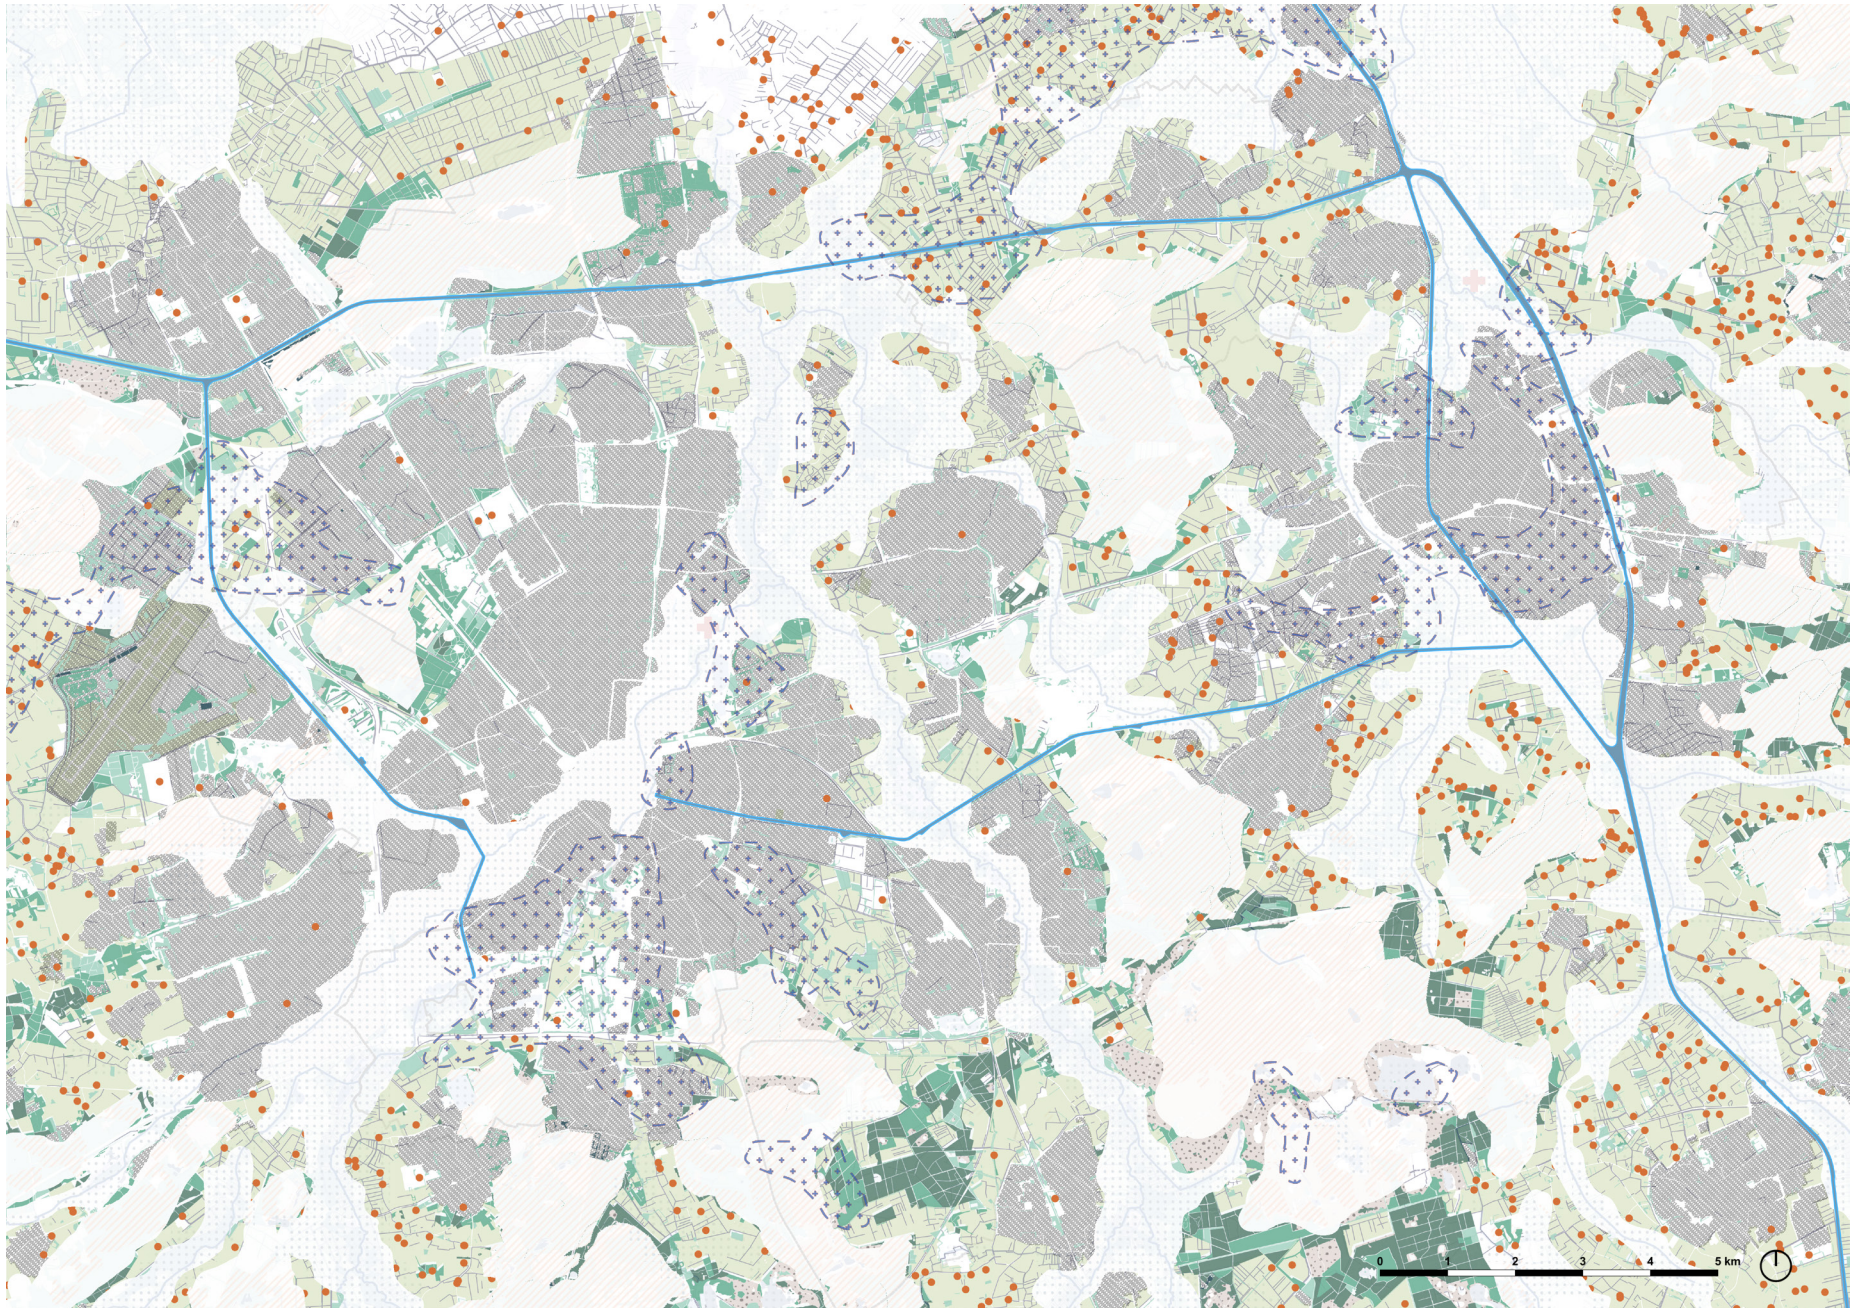

(Ground) Water system - *The middleground*

Rapid drainage|Pollution

Groundwater extraction

High evaporation

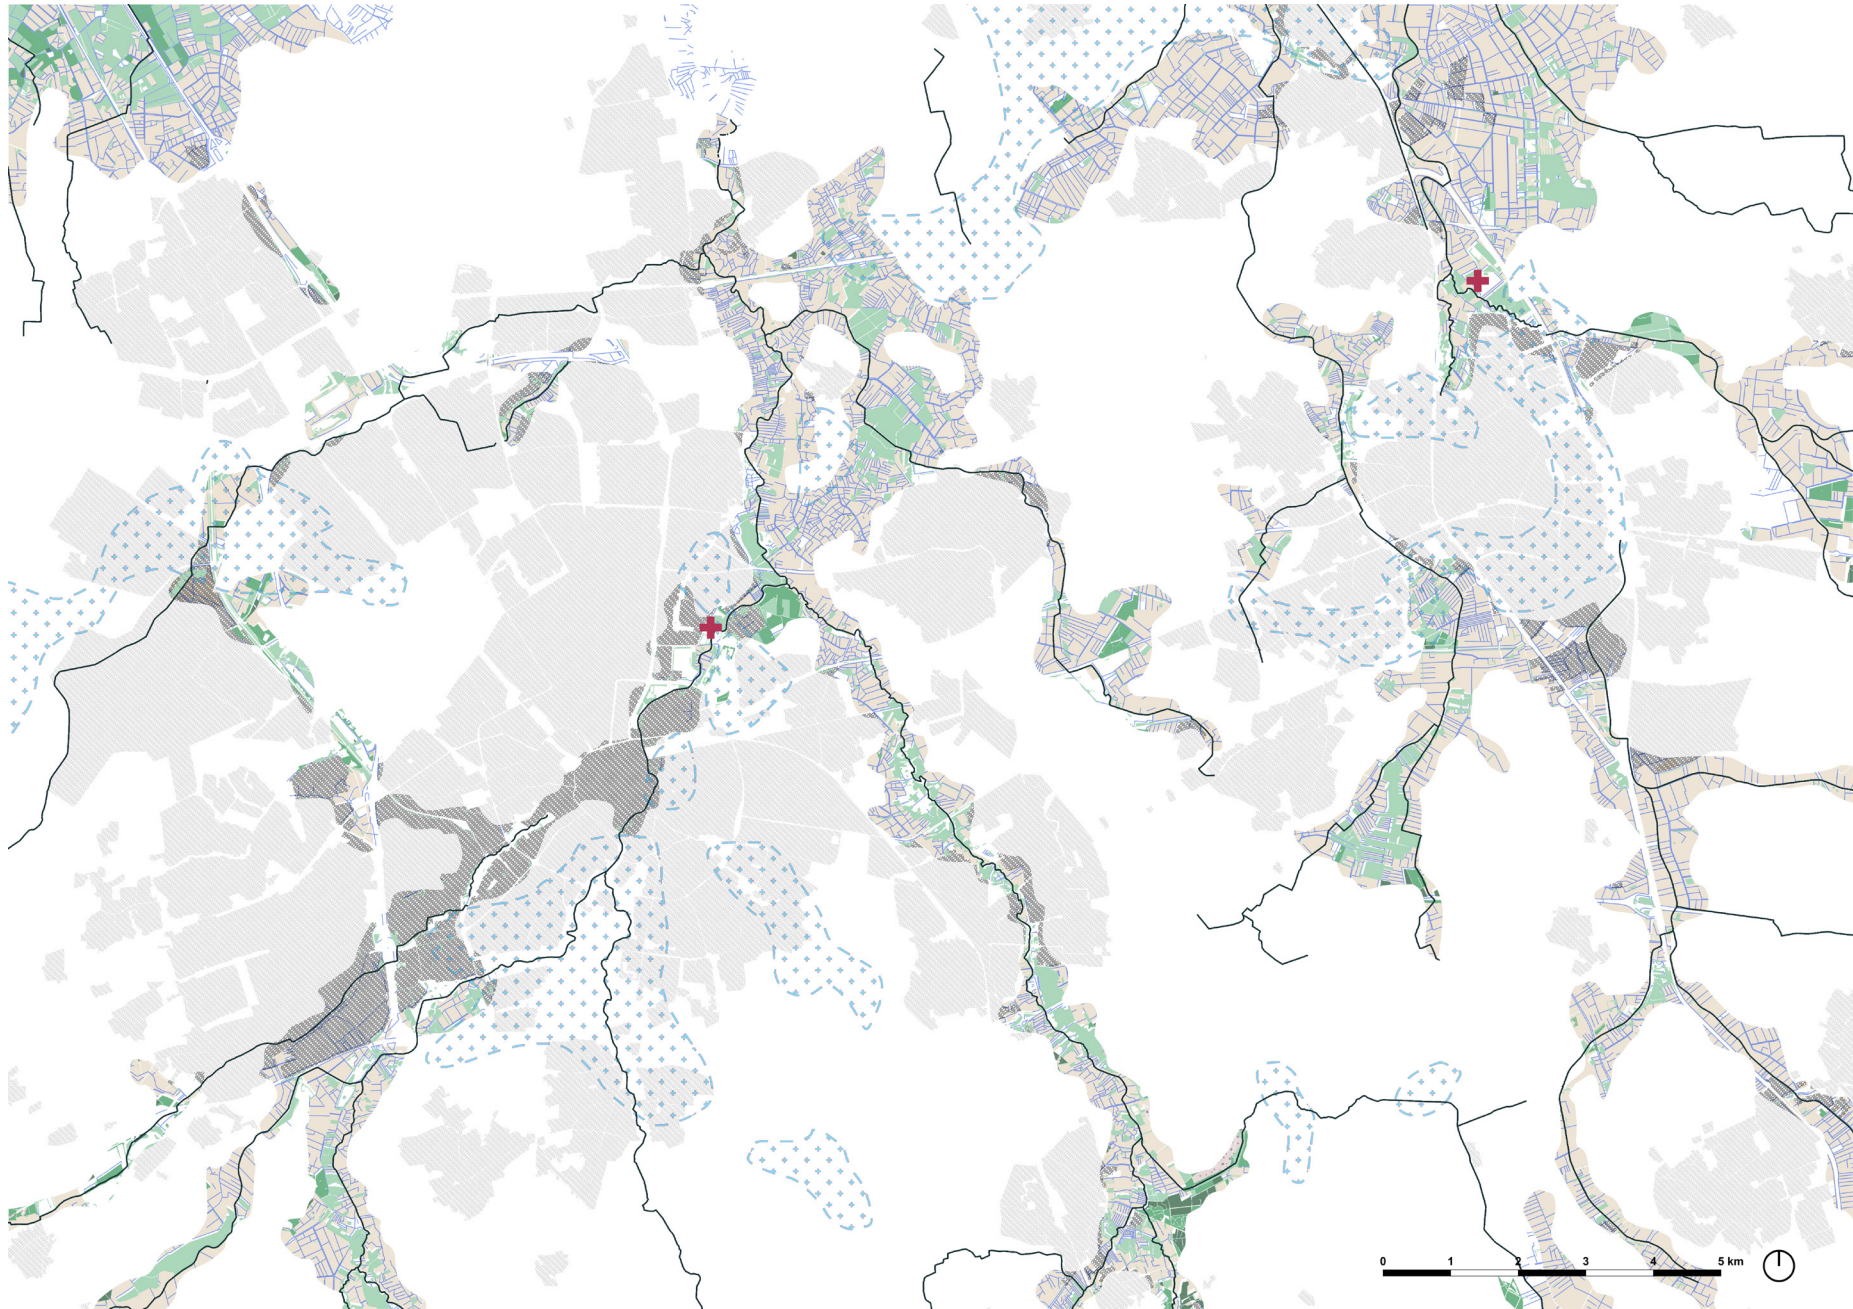

Rapid drainage

(Ground) Water system - *The valley*

Rapid drainage

Rapid drainage|  
Little seepage

## ***Design principles for Strengthening drought adaptation***

**1. Minimize groundwater use**

**2. Retaining water**

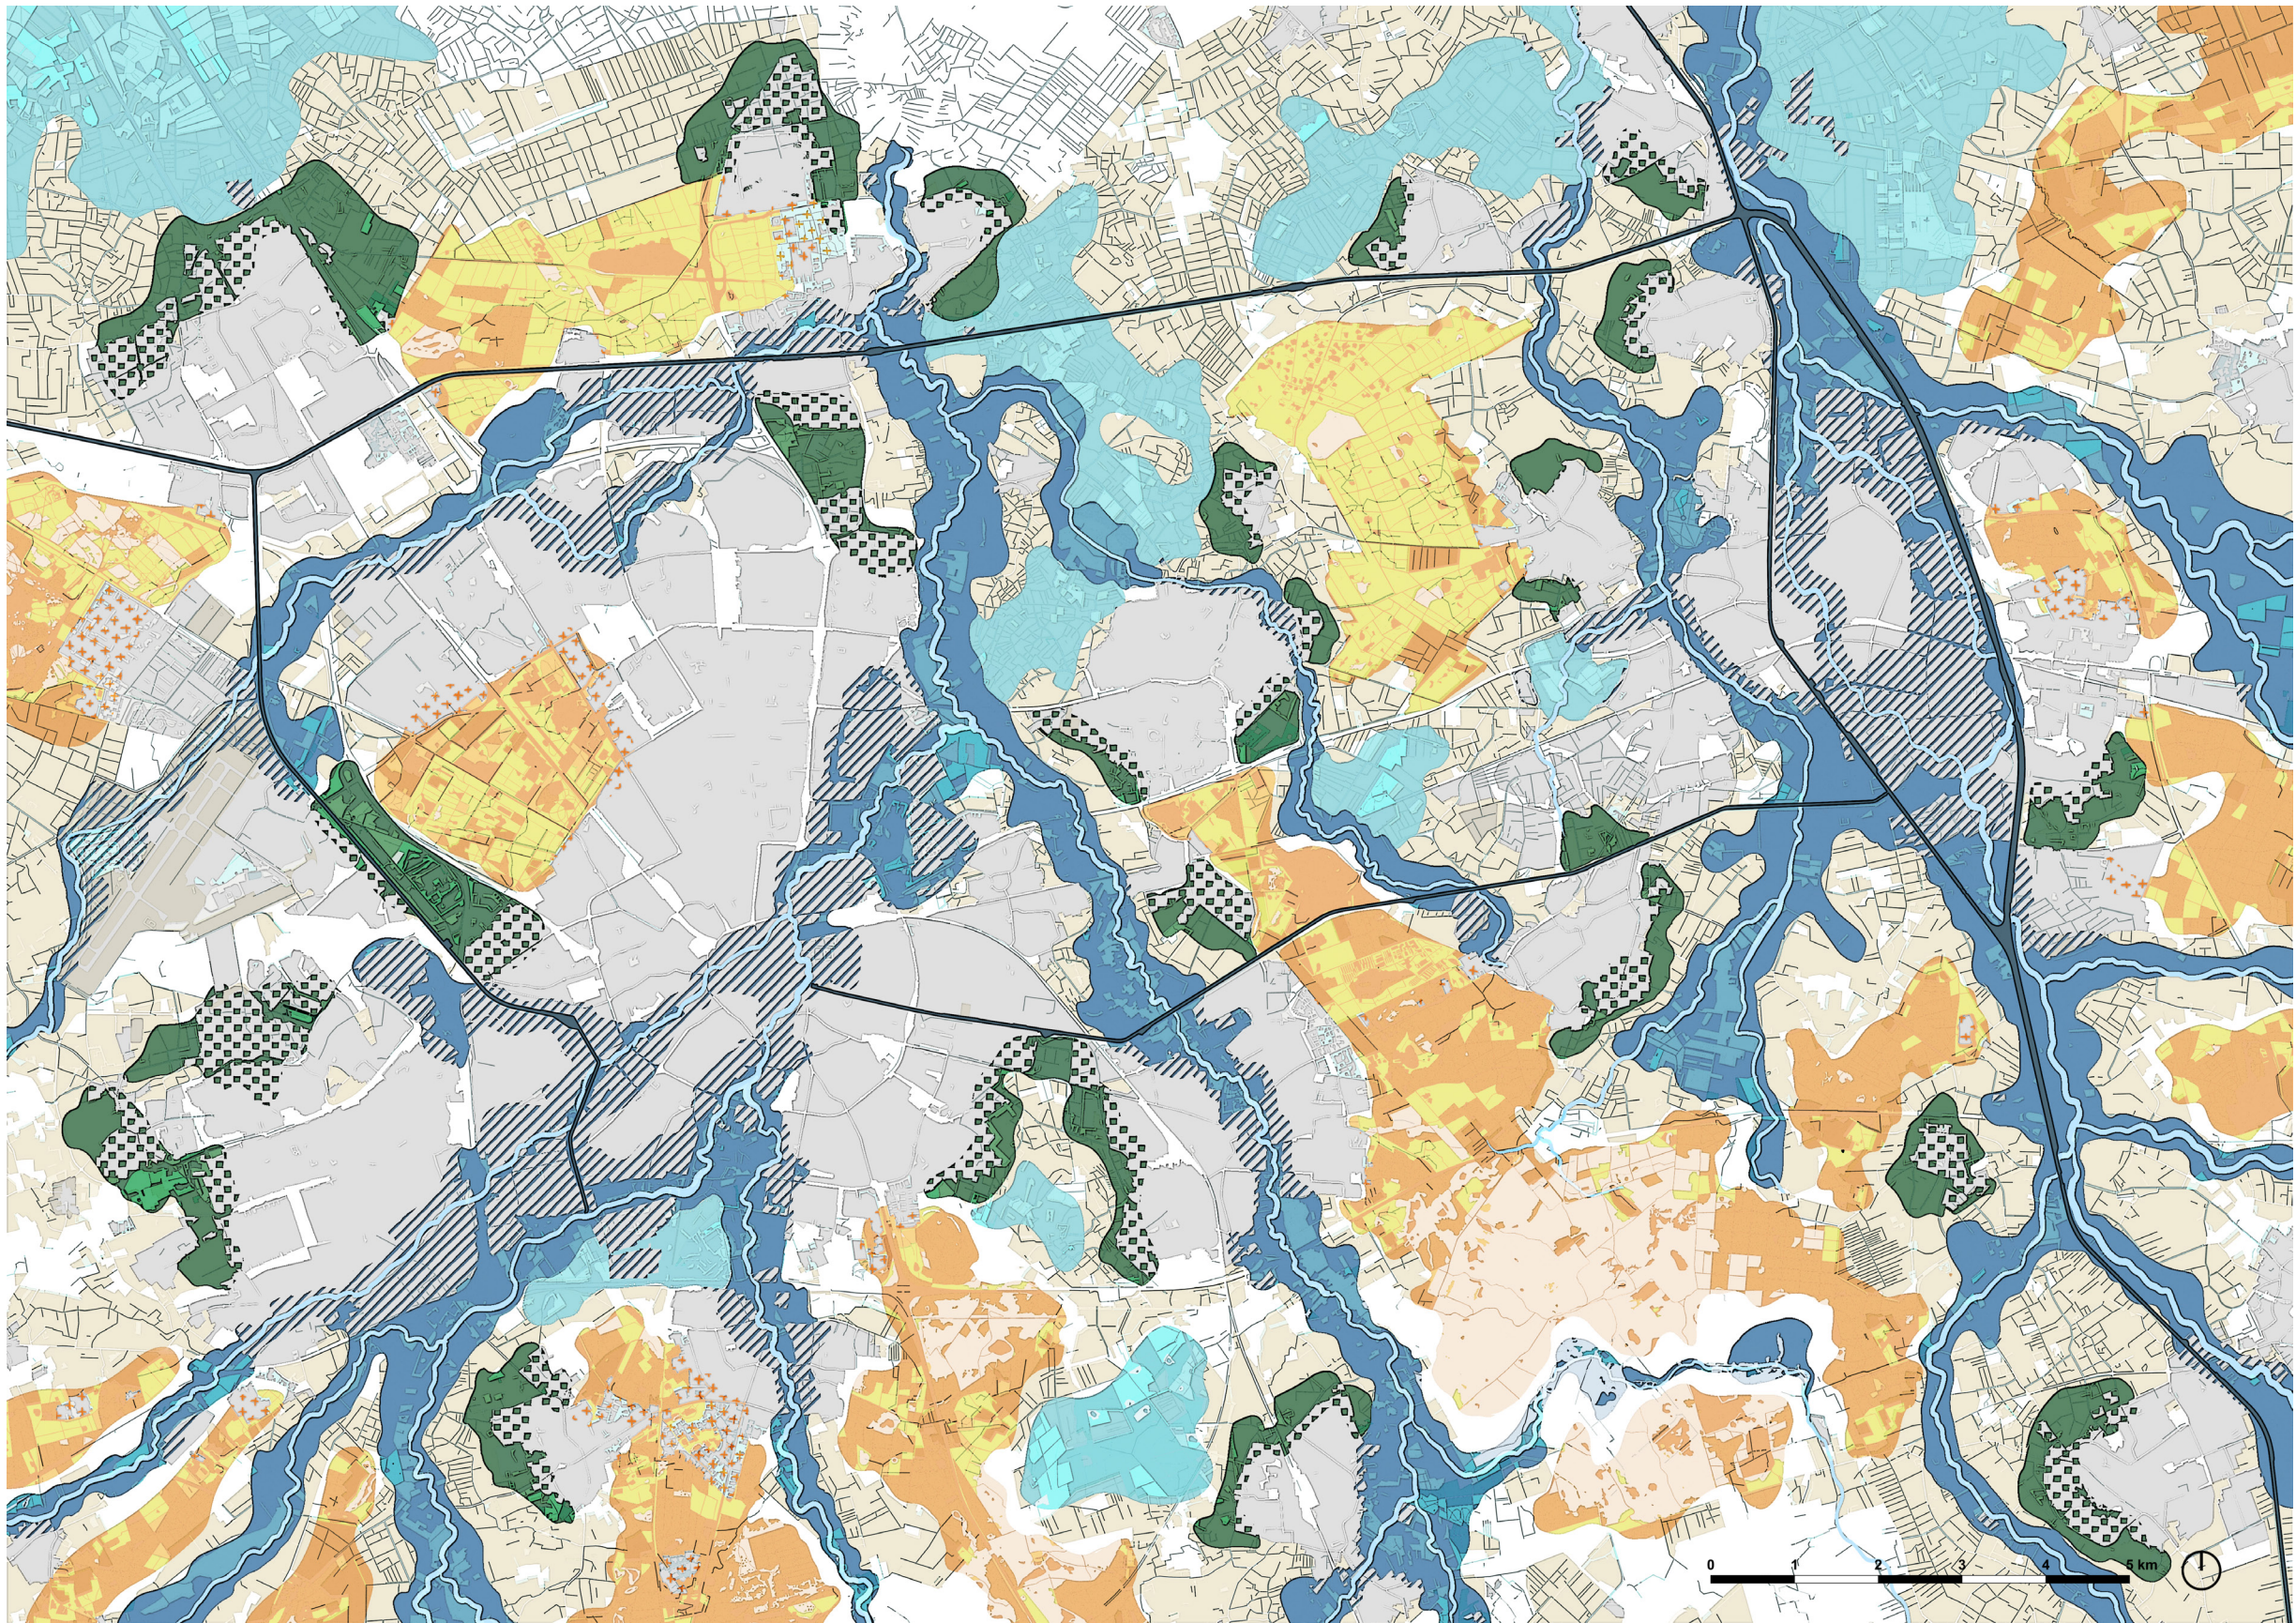

**3. Storing water as alternative source**

**4. Replenishment of groundwater**

*Regional vision for drought adaptation - A resilient new water machine*

*The ridge*

-  Enhanced infiltration and interception of runoff in coniferous forests
-  Retention of water in urban areas as infiltration zones

*The middleground*

-  Disconnection of stormwater and sewerage systems at the urban fringe
-  Precision/alternative agriculture with water storage space
-  Forest reservoirs on the urban fringe for water purification and delivery
-  Canals as a source of dry-season water recharge

*The valley*

-  Restoration of seepages and floodable forests in stream valleys and broeks
-  Floodable measures to restore seepage in urban area

## *Design strategies for drought adaptation - A new forest toolbox*

*The Ridge*

*The Middleground*

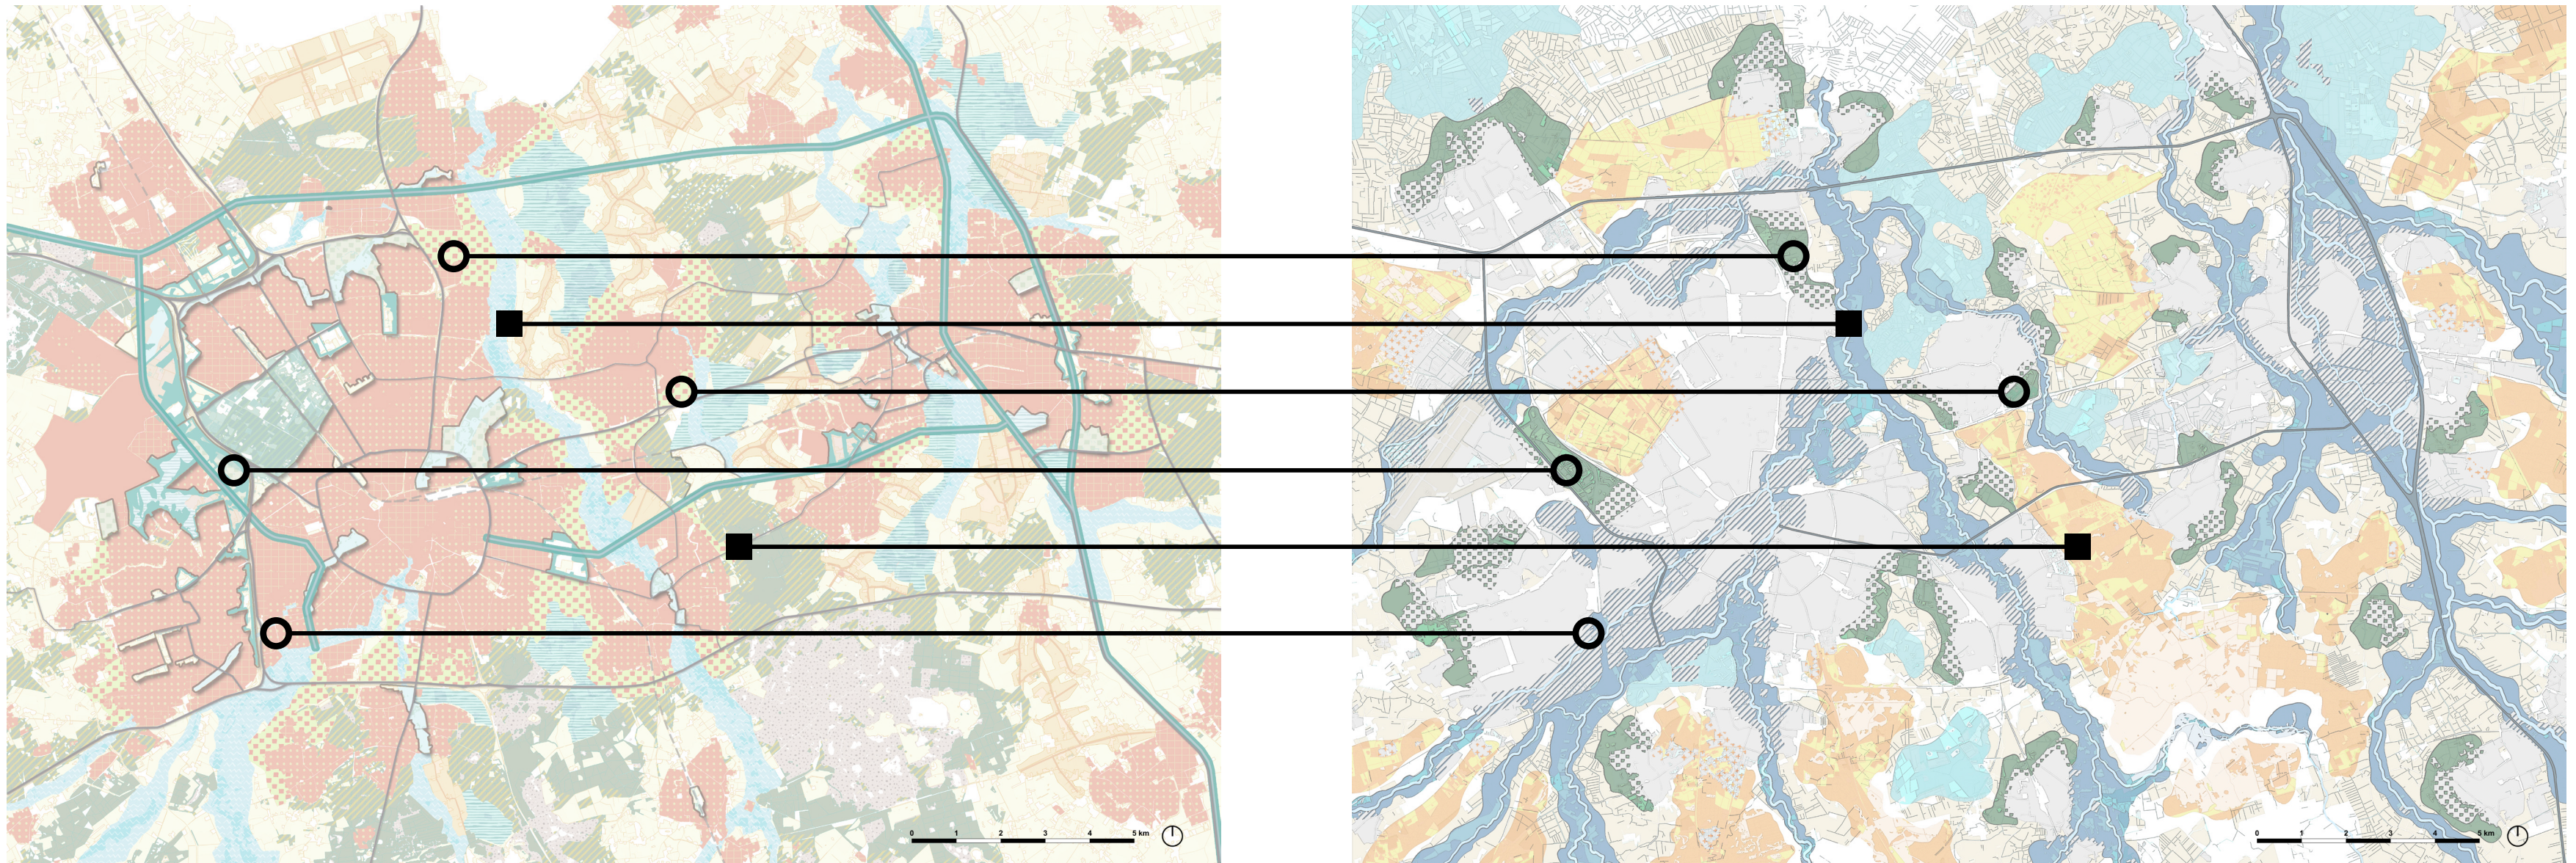

*The Valley*

## *Synergies and conflicts*

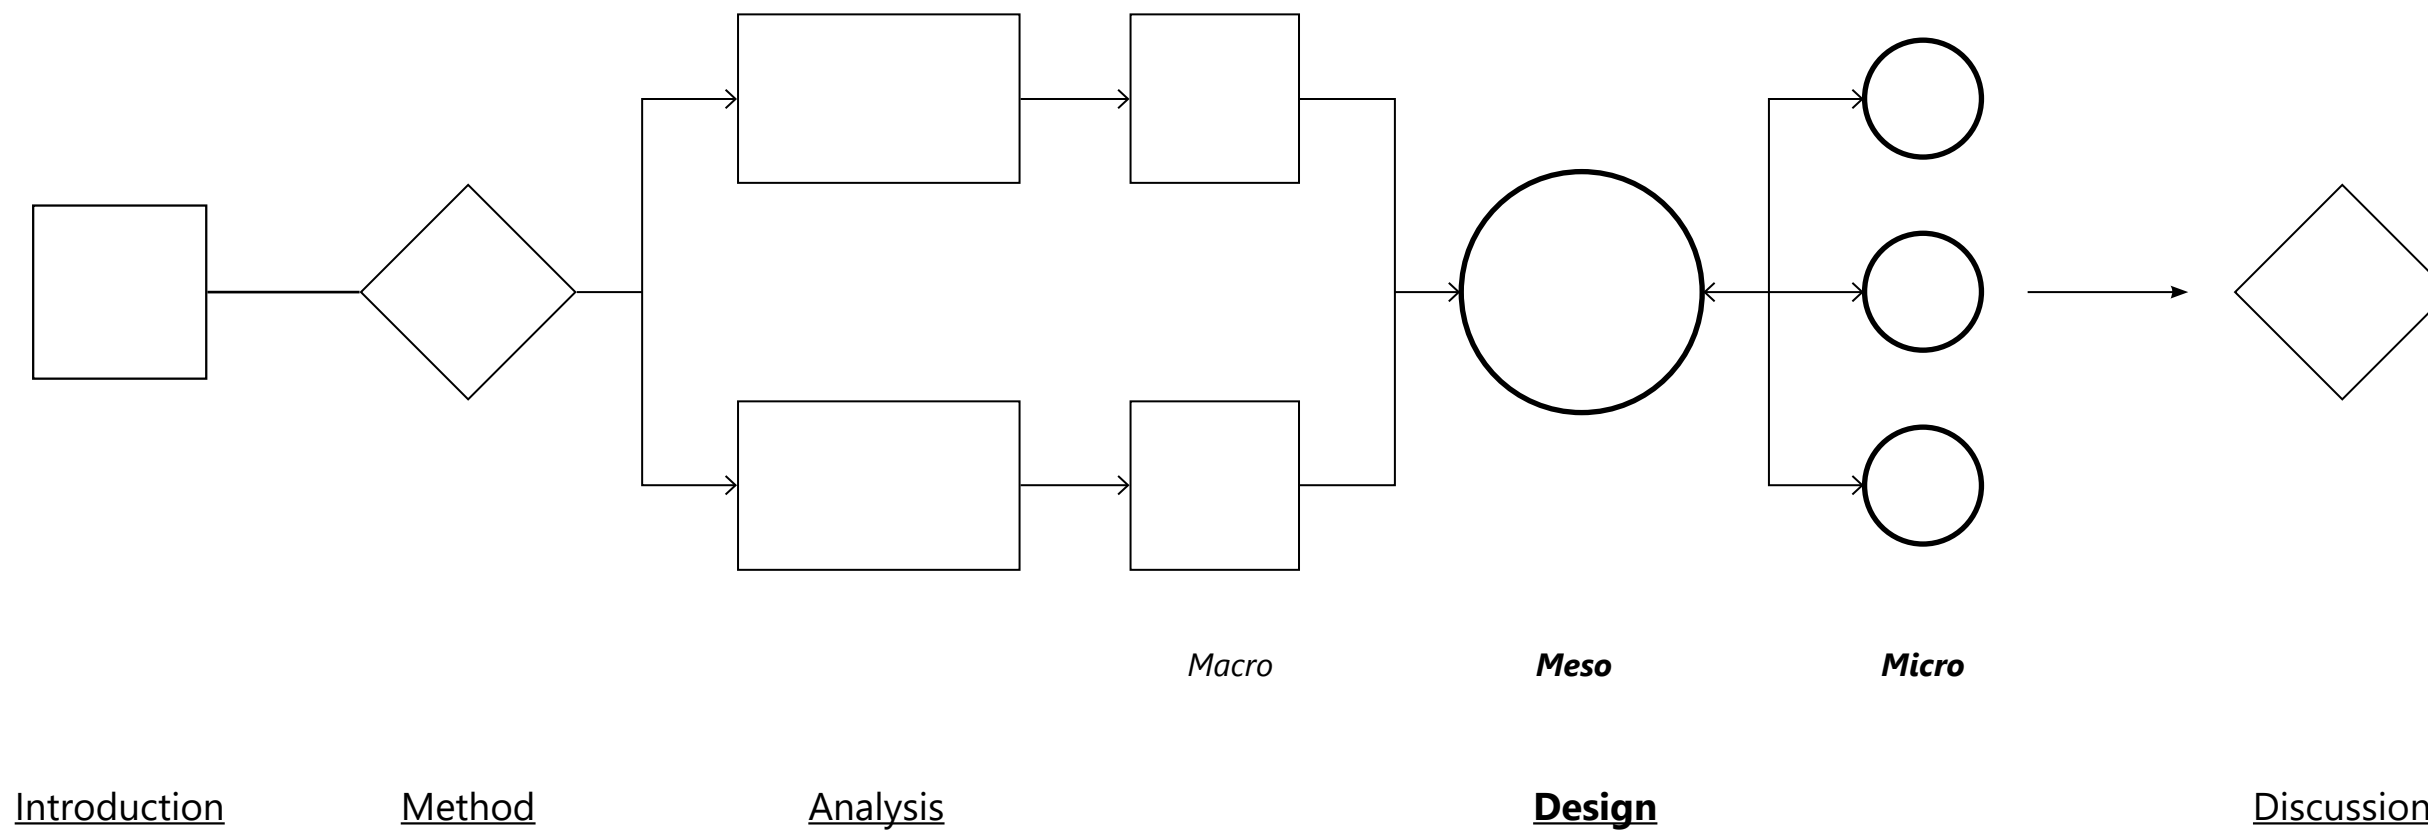

The two visions are synergistic in some places, but conflicting in others. This is also reflected in the design principles and spatial strategies. A few examples of synergy and conflict are shown here and will be the starting point for local scale transformation later.

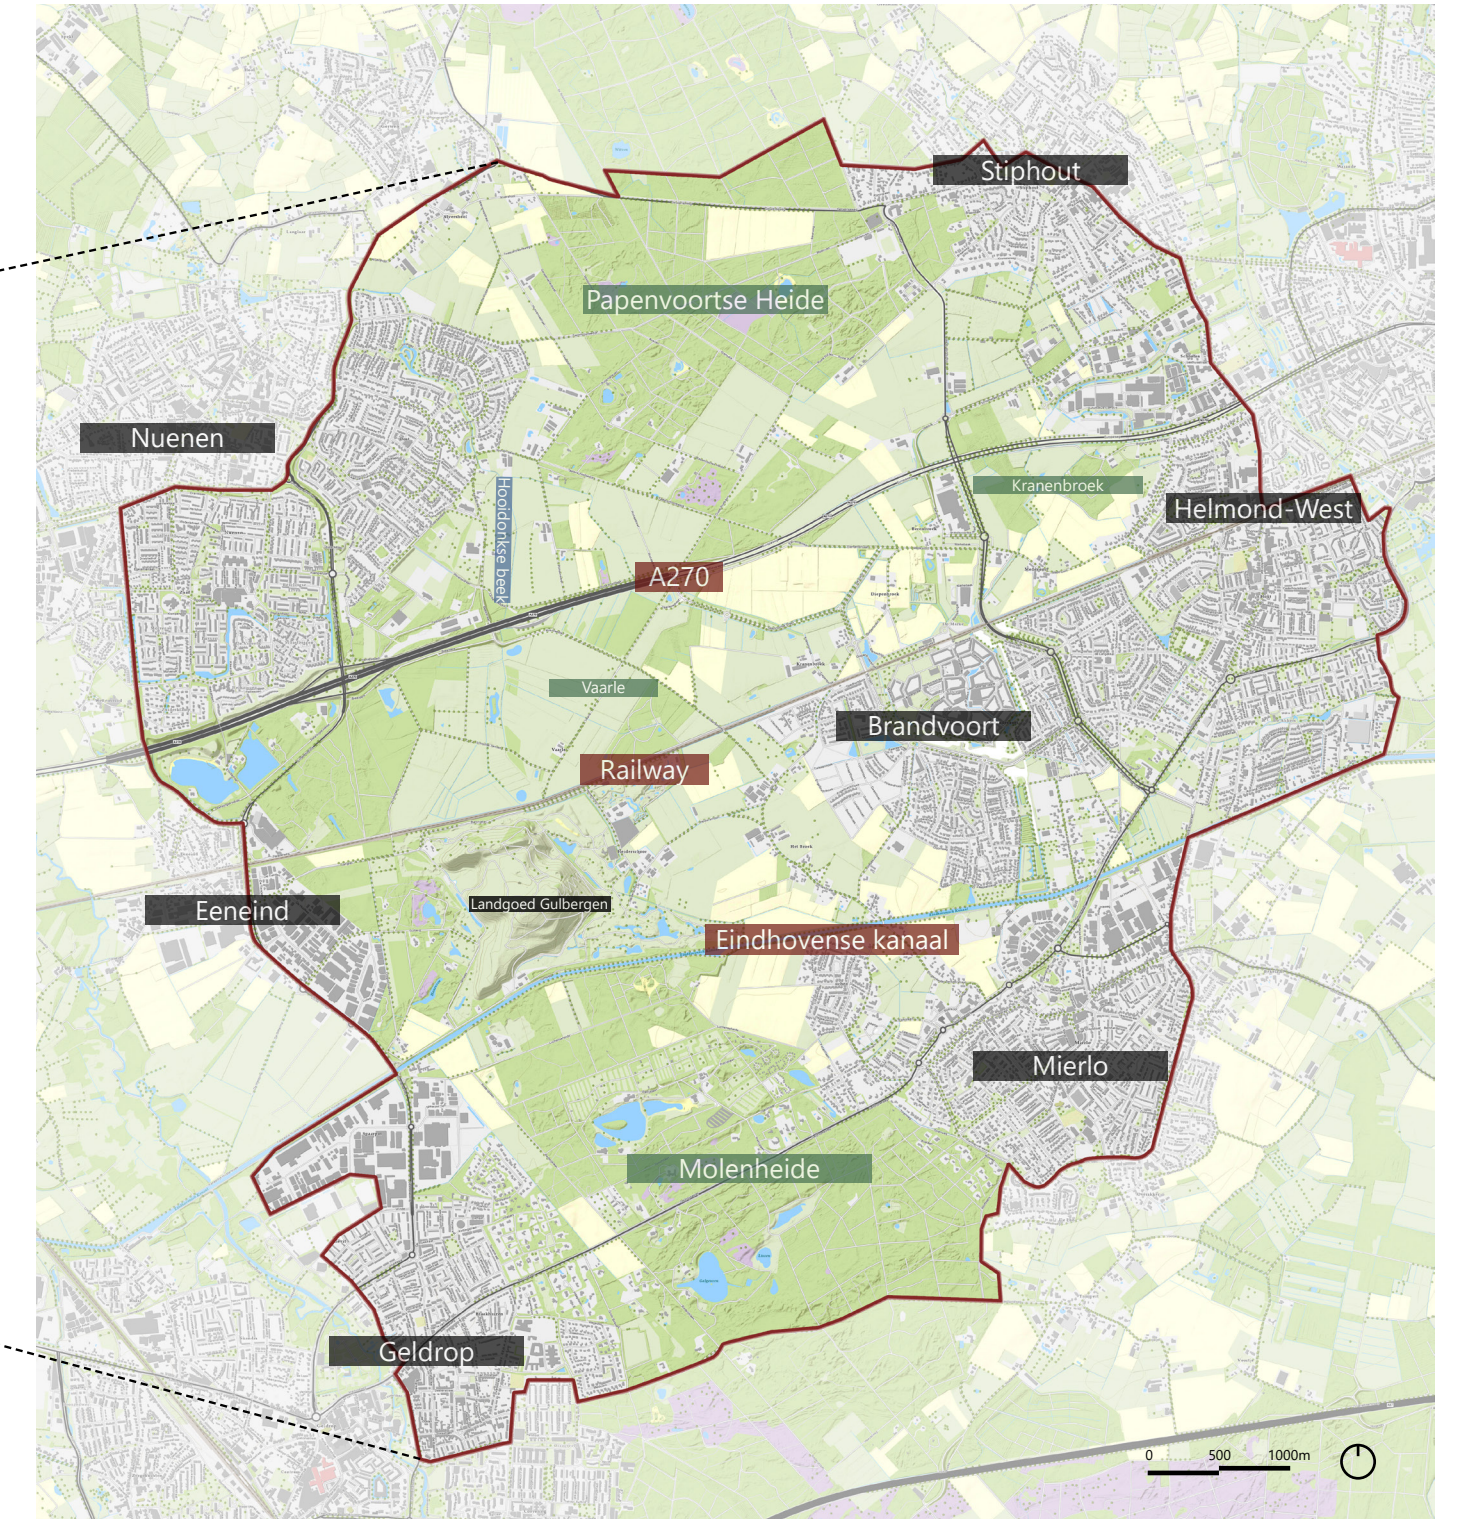

## ***SubRQ***

*How can forest strategies spatially integrated in design transformation for cases of local scale?*

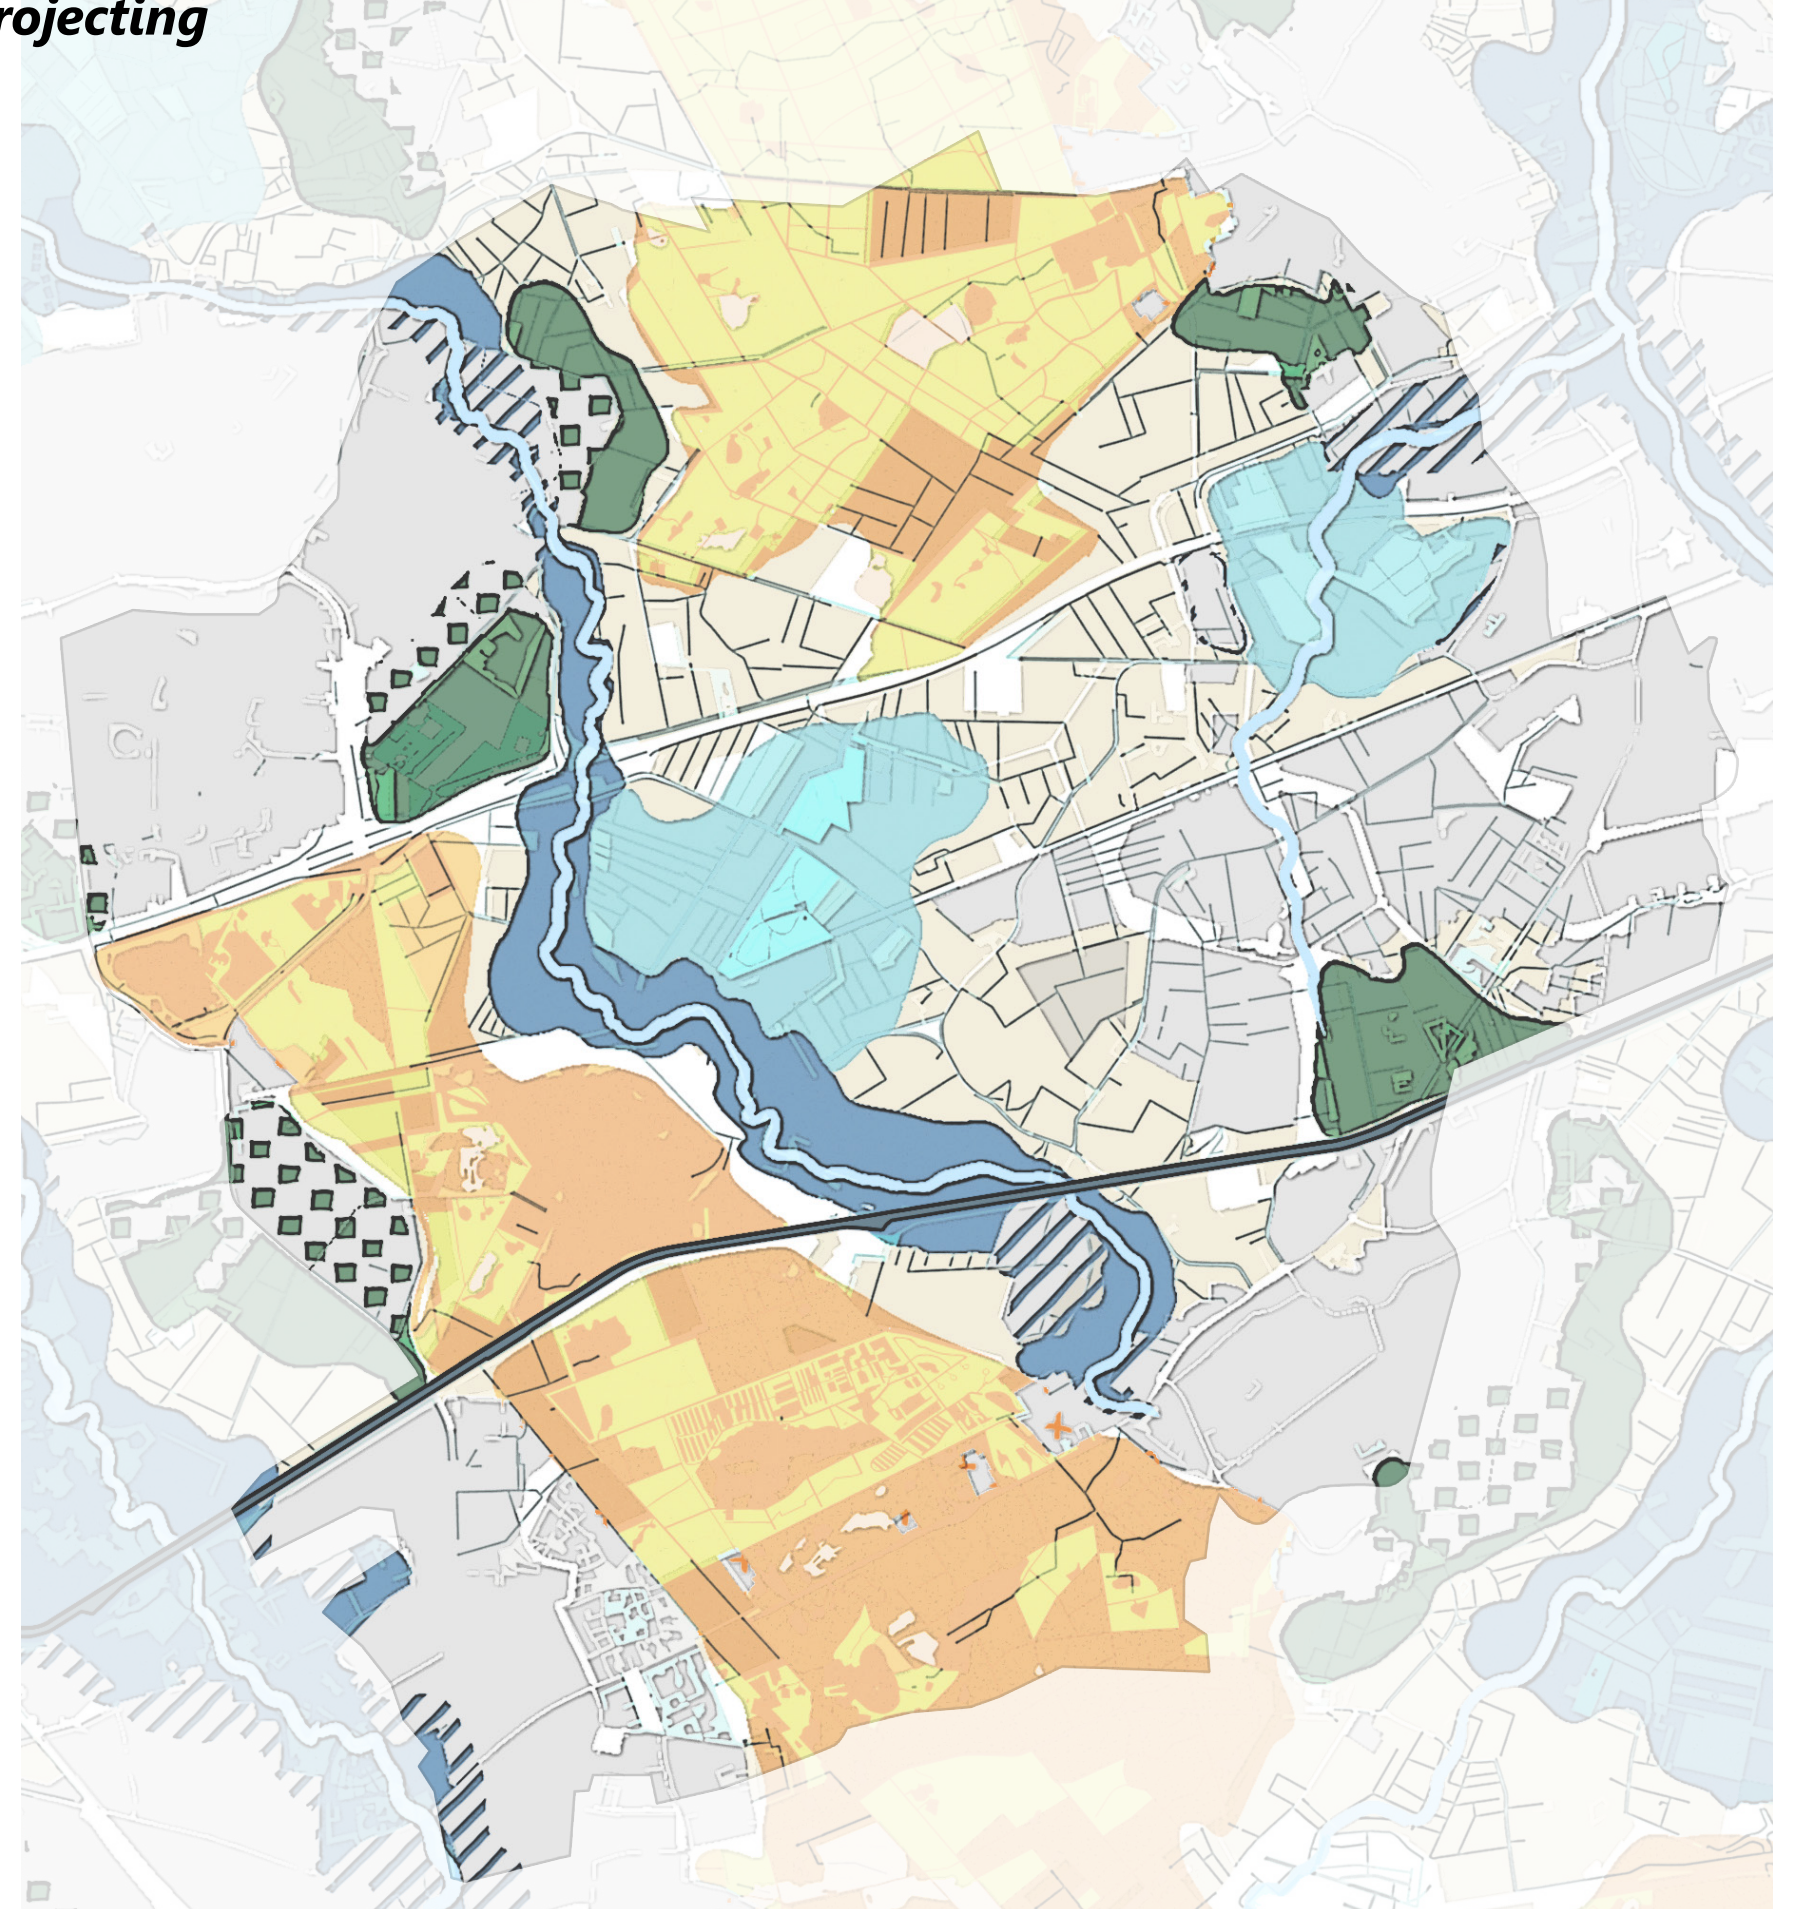

## *The choice of the case area*

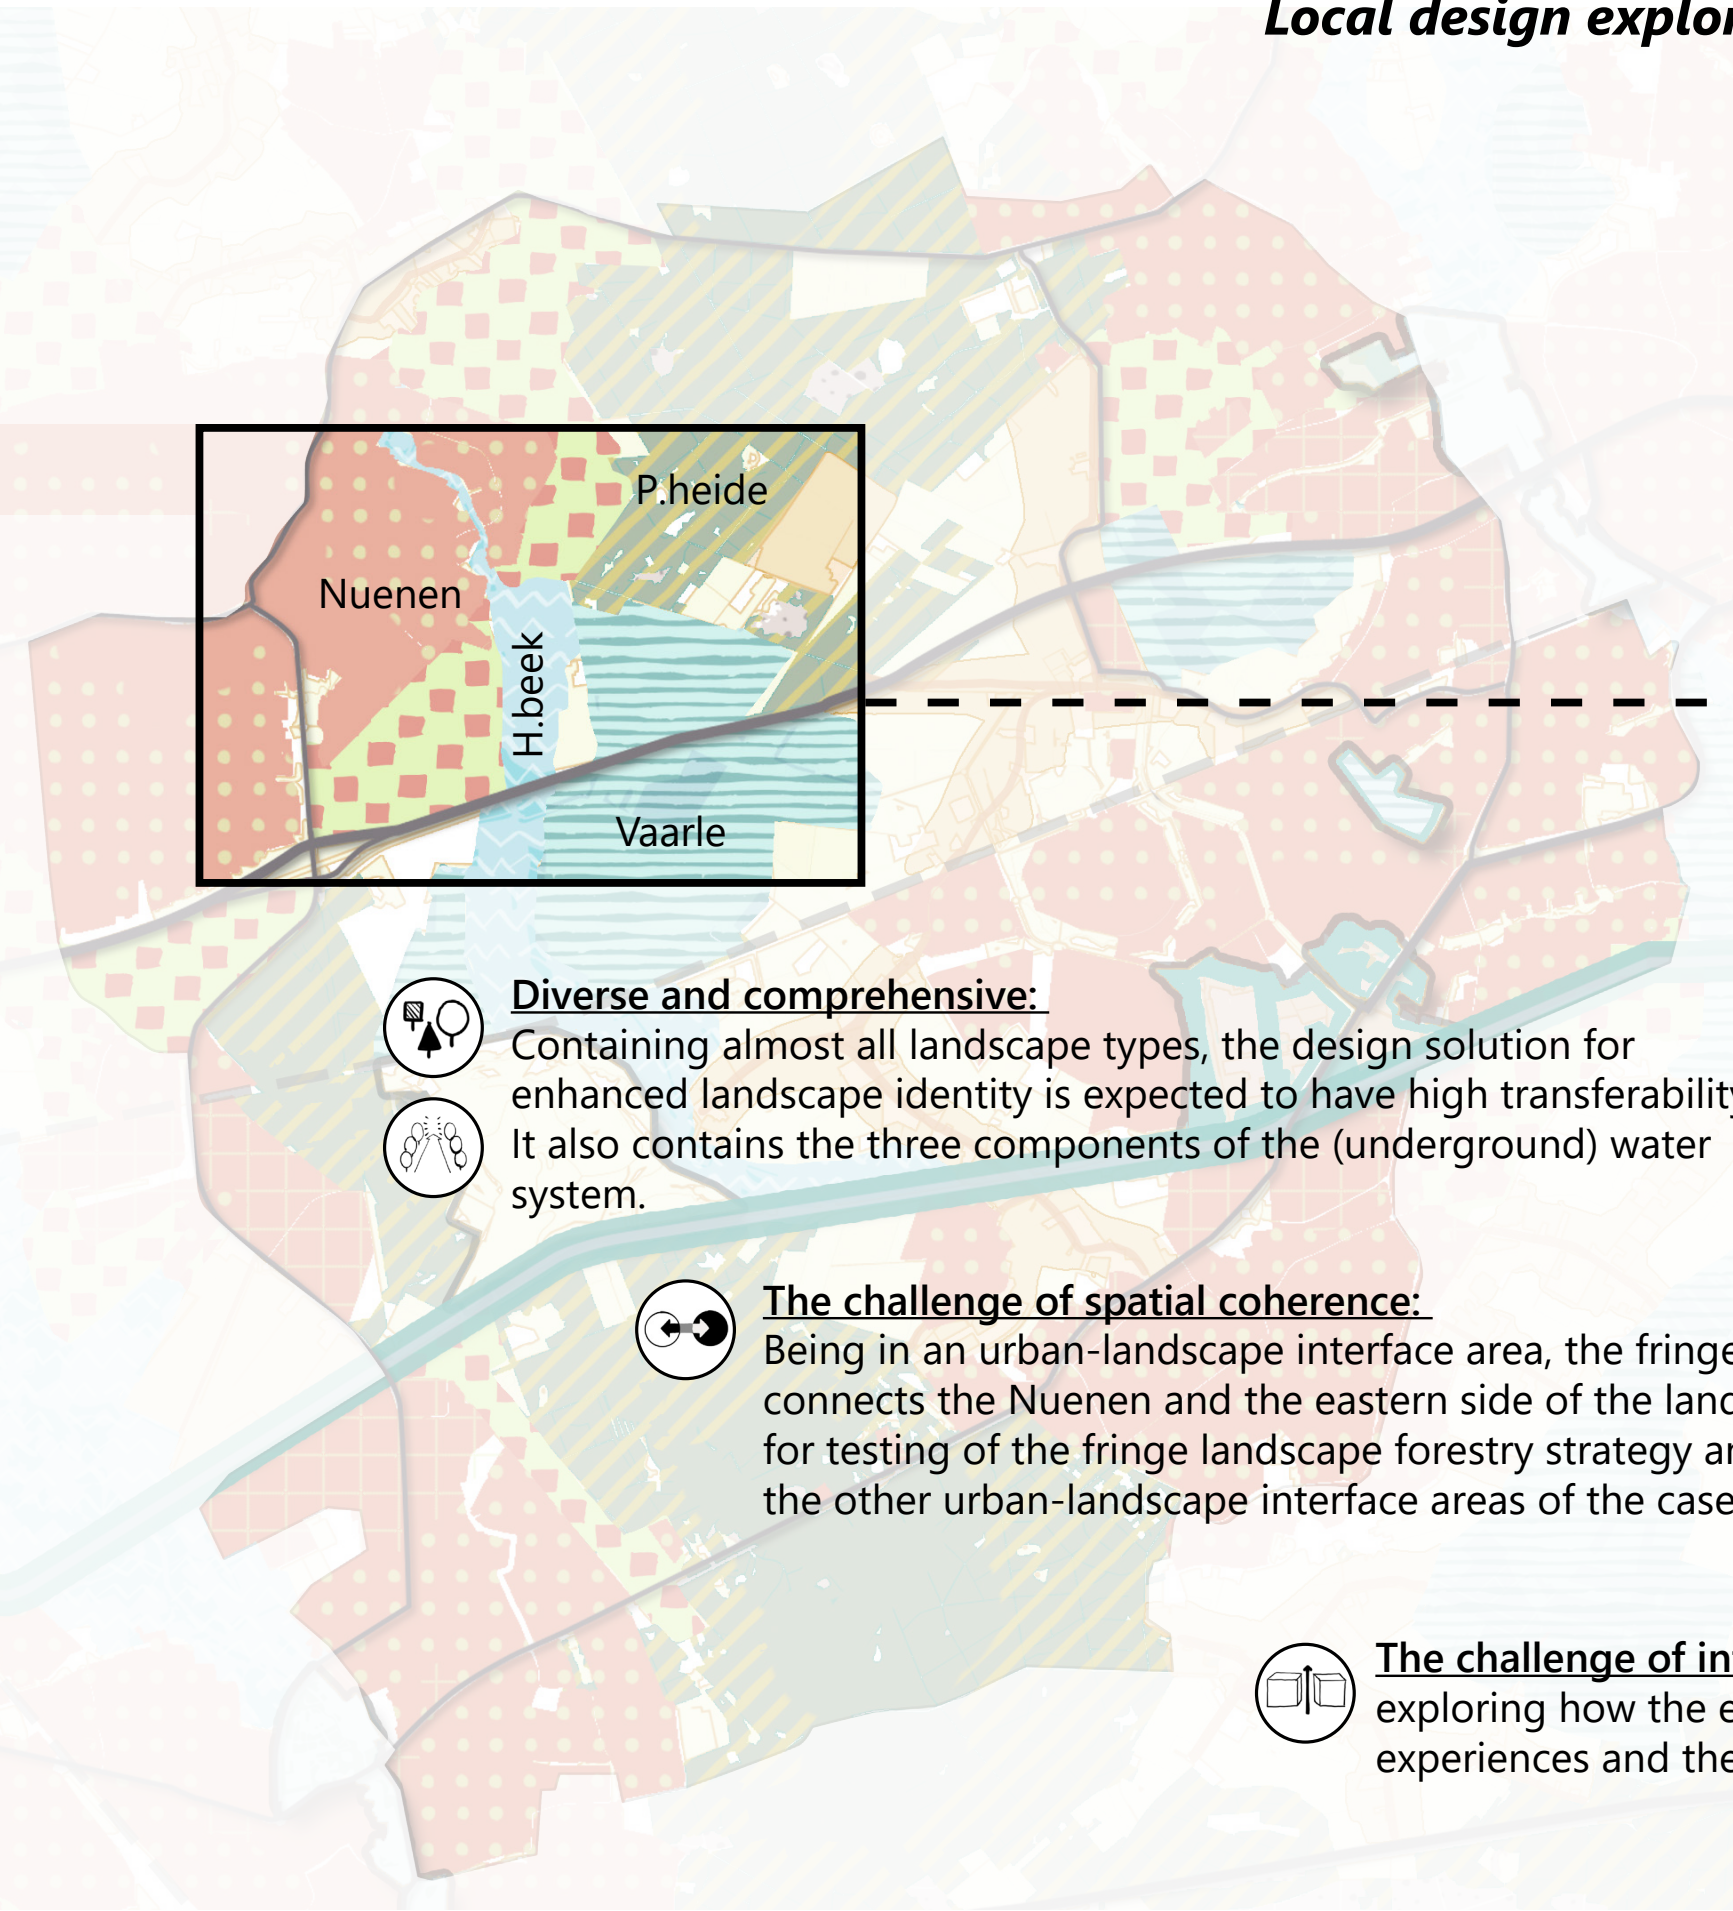

***Regional vision projecting***

*Local design explorations on the fringe of Nuenen*

**Diverse and comprehensive:**

Containing almost all landscape types, the design solution for enhanced landscape identity is expected to have high transferability. It also contains the three components of the (underground) water system.

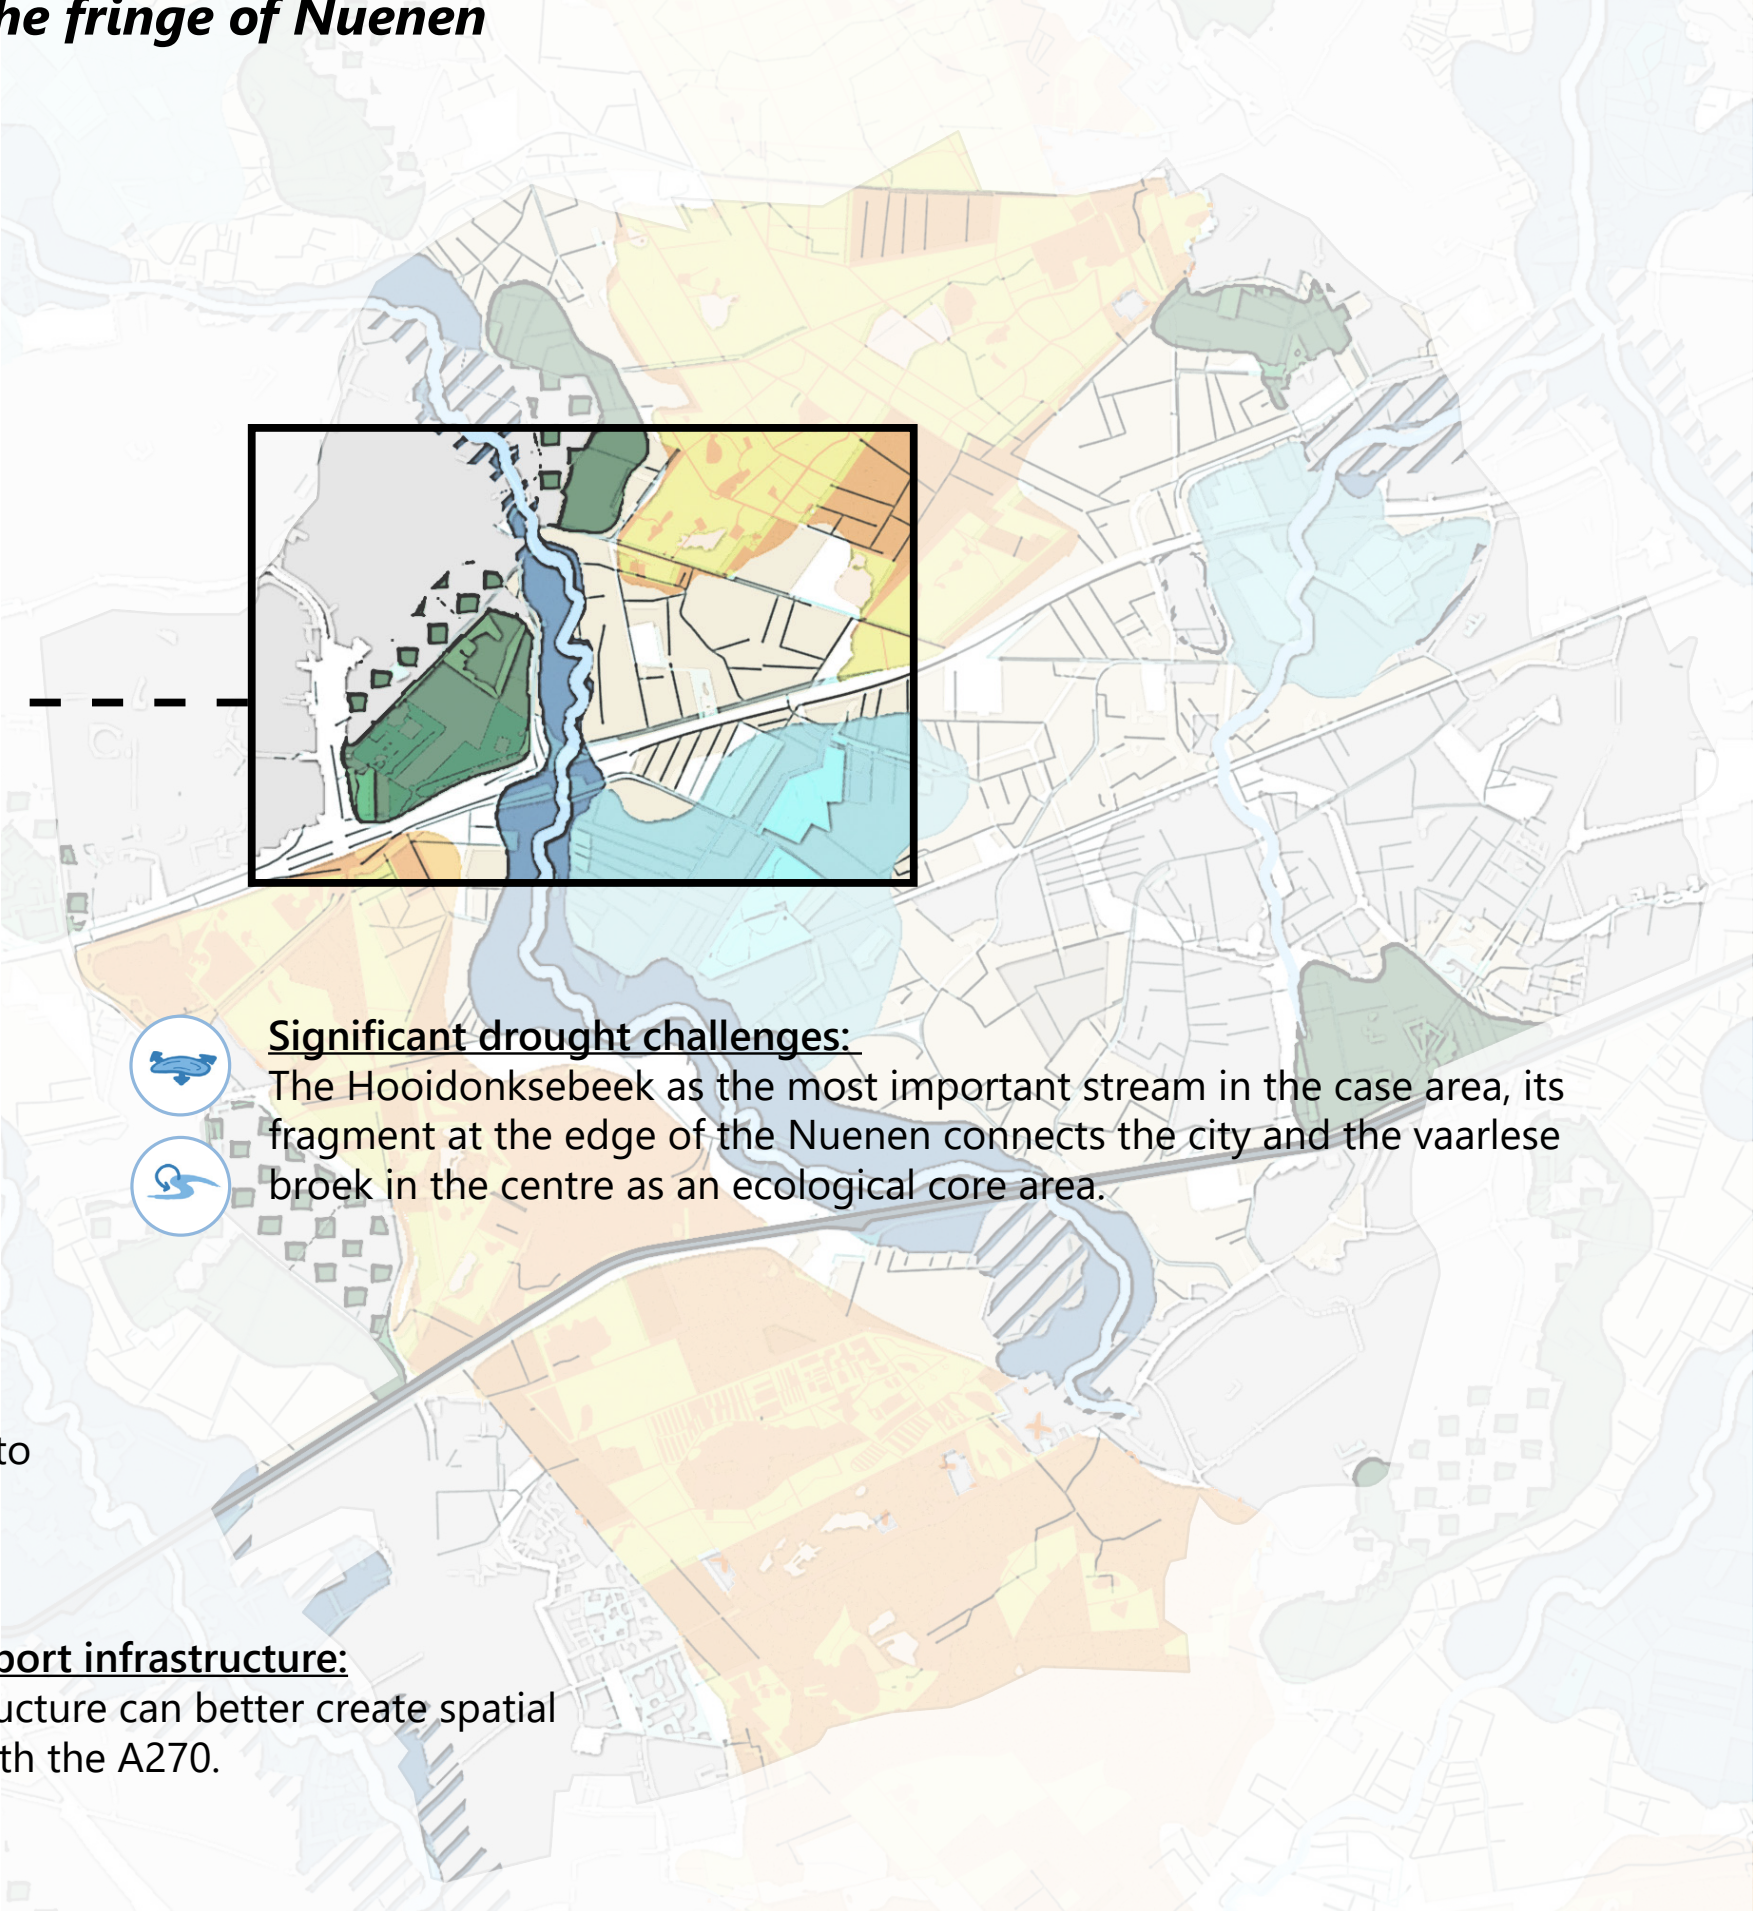

**The challenge of spatial coherence:**

Being in an urban-landscape interface area, the fringe landscape connects the Nuenen and the eastern side of the landscape, allowing for testing of the fringe landscape forestry strategy and extending it to the other urban-landscape interface areas of the case area.

**The challenge of integrating transport infrastructure:**

exploring how the existing road structure can better create spatial experiences and the relationship with the A270.

**Significant drought challenges:**

The Hooidonksebeek as the most important stream in the case area, its fragment at the edge of the Nuenen connects the city and the vaarlese broek in the centre as an ecological core area.

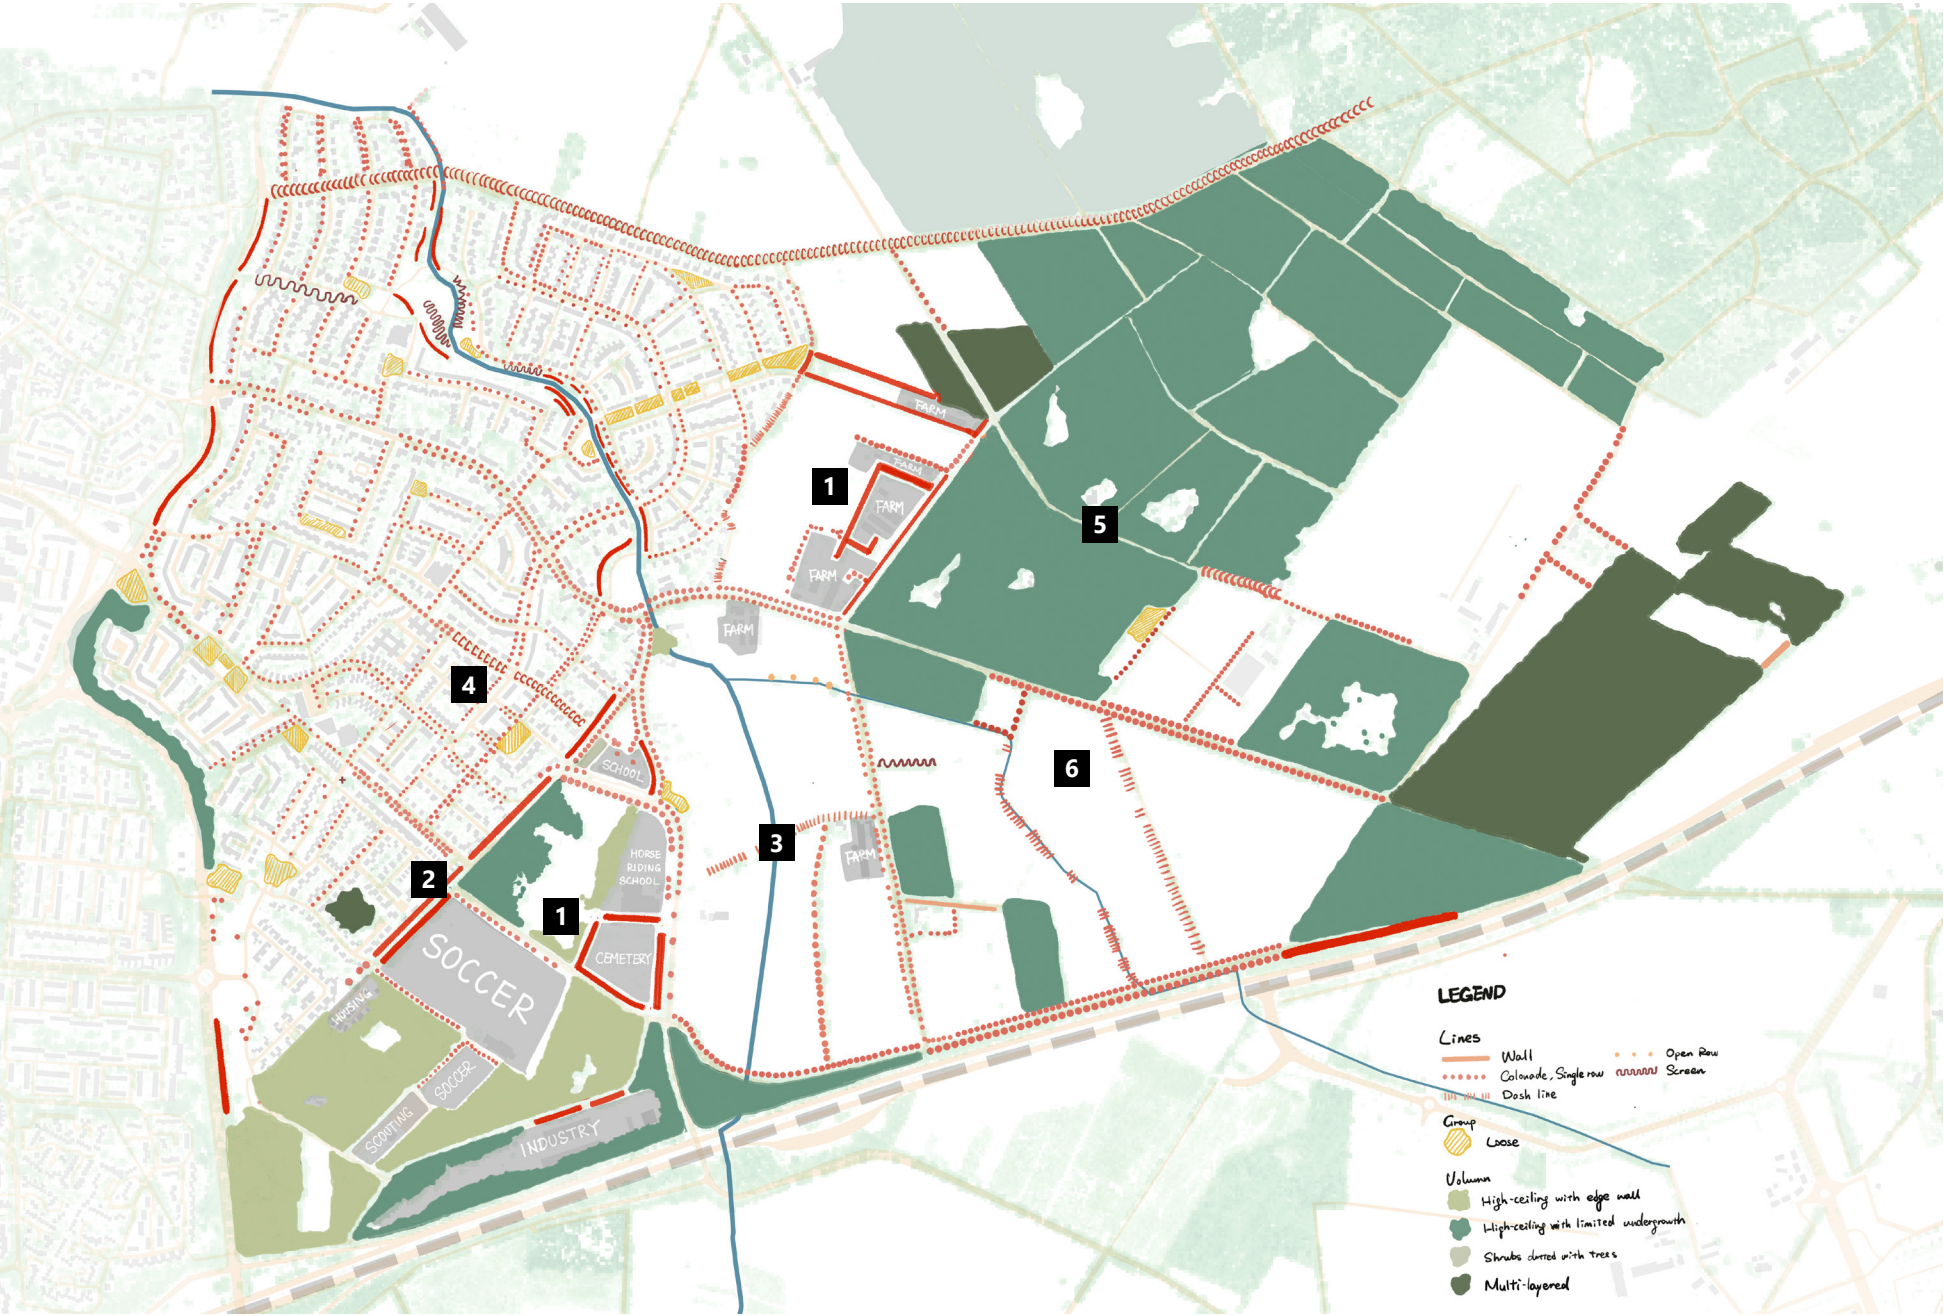

Spatial analysis based on tree syntax

1 Fringe tree 'rooms' with various function

4 Nuenen-Oost as raster forest

2 Tree wall as barrier on the fringe

5 Papenvoortse Heide as monogenous high dense forest

3 Consolidated land and hidden Hooidonkse beek

6 Normalised former broek rooms as farmland

LEGEND

Lines

- Tree wall
- Colonnade
- Open row
- Dash line
- Screen/curtain
- Arcade

Groups

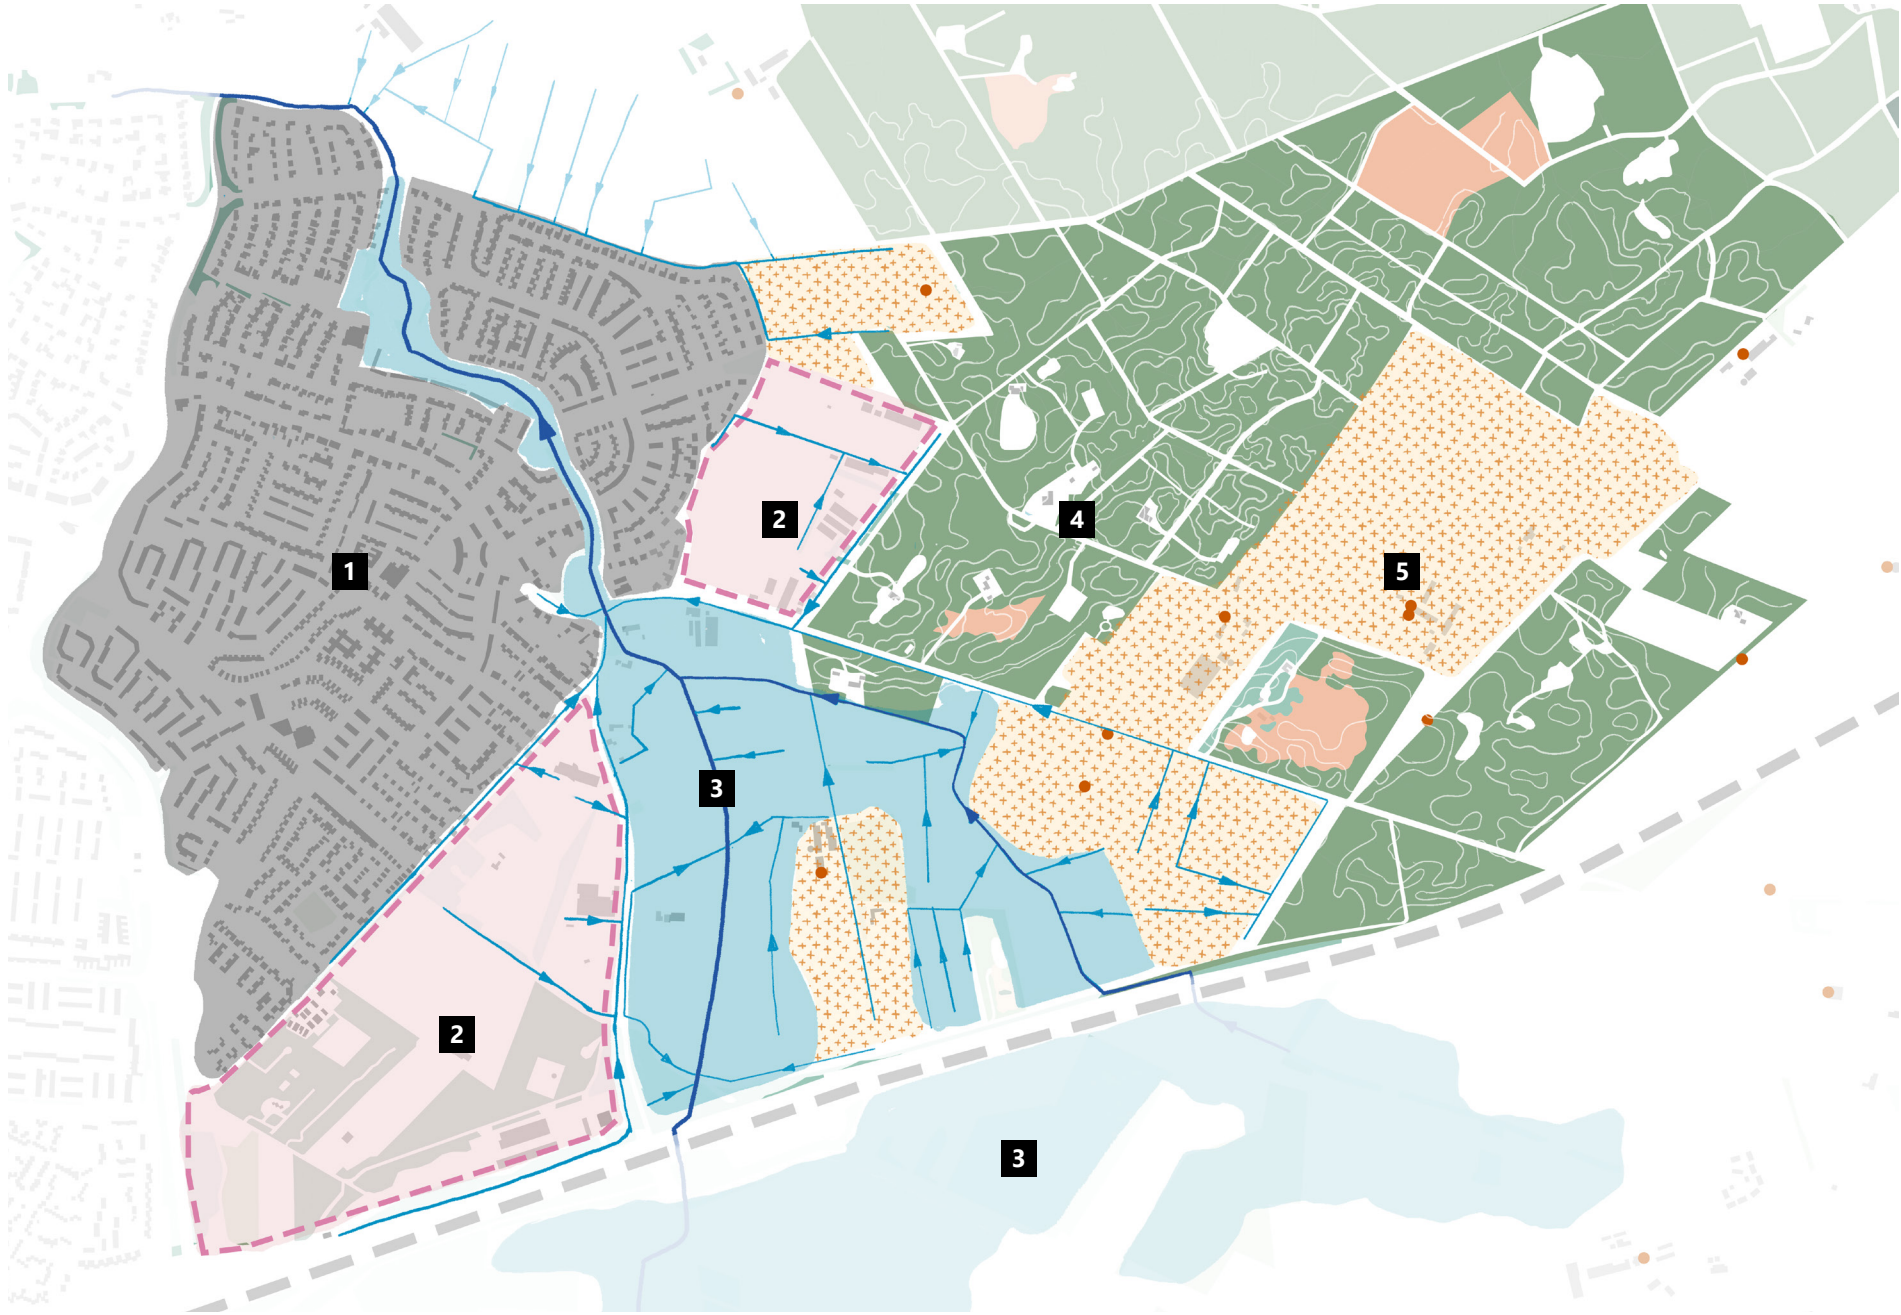

Frames

- Multilayered volumn
- High-ceiling with limited
- High-ceiling with edge wall
- Shrubscape with scattered trees

Water system analysis

LEGEND

-  Stream course
-  Main ditches
-  Groundwater Extraction
-  Middleground - urbanization area
-  Middleground - urban fringe
-  The valley
-  Middleground - Agriculture
-  The ridge - Dry forest
-  The ridge - Heathland

**1** Nuenen-East (Middleground)  
Drainage to urban sewage system

**2** East Fringe  
(Middleground)  
Opportunity of forest  
resevoir

**3** Hooidonkse beek (Valley)  
Stream buffer forest  
Strengthen seepage

**4** Papenvoortse Heide (Ridge)  
Catch the runoff  
Strengthen infiltration

**5** Farms and meadows  
(Middleground)  
Reduce extraction  
Alternative resource

*Integrated application of strategies and transformation of forest patterns*

*Integrated application of strategies and transformation of forest patterns*

?

The strategy of landscape identity enhancement in the stream valley require the spatial structure of ditch ribbons, and the stream itself become an appealing element or the landmark to attract people's visiting through the new experience route. The functions such as housing, playground, allotment garden and other recreational spaces are settled in along the stream

However, in the drought adaptation strategy, the stream need much more spaces for flowing and meandering, thus require less ditches, which hide its structure as a cultural landscape; and a more natural bank and flooding zone have conflicts with the function arrangement in the plots.

*Design transformation of Hooidonksebeek valley*

**CURRENT SITUATION - Year 0**

Allow seepage to recur and restore a wet hydrological environment along the stream

Removal and modification of ditches

Establishment of floodable zones closed to the watercourse to let water stays longer

Restoration of meandering streams

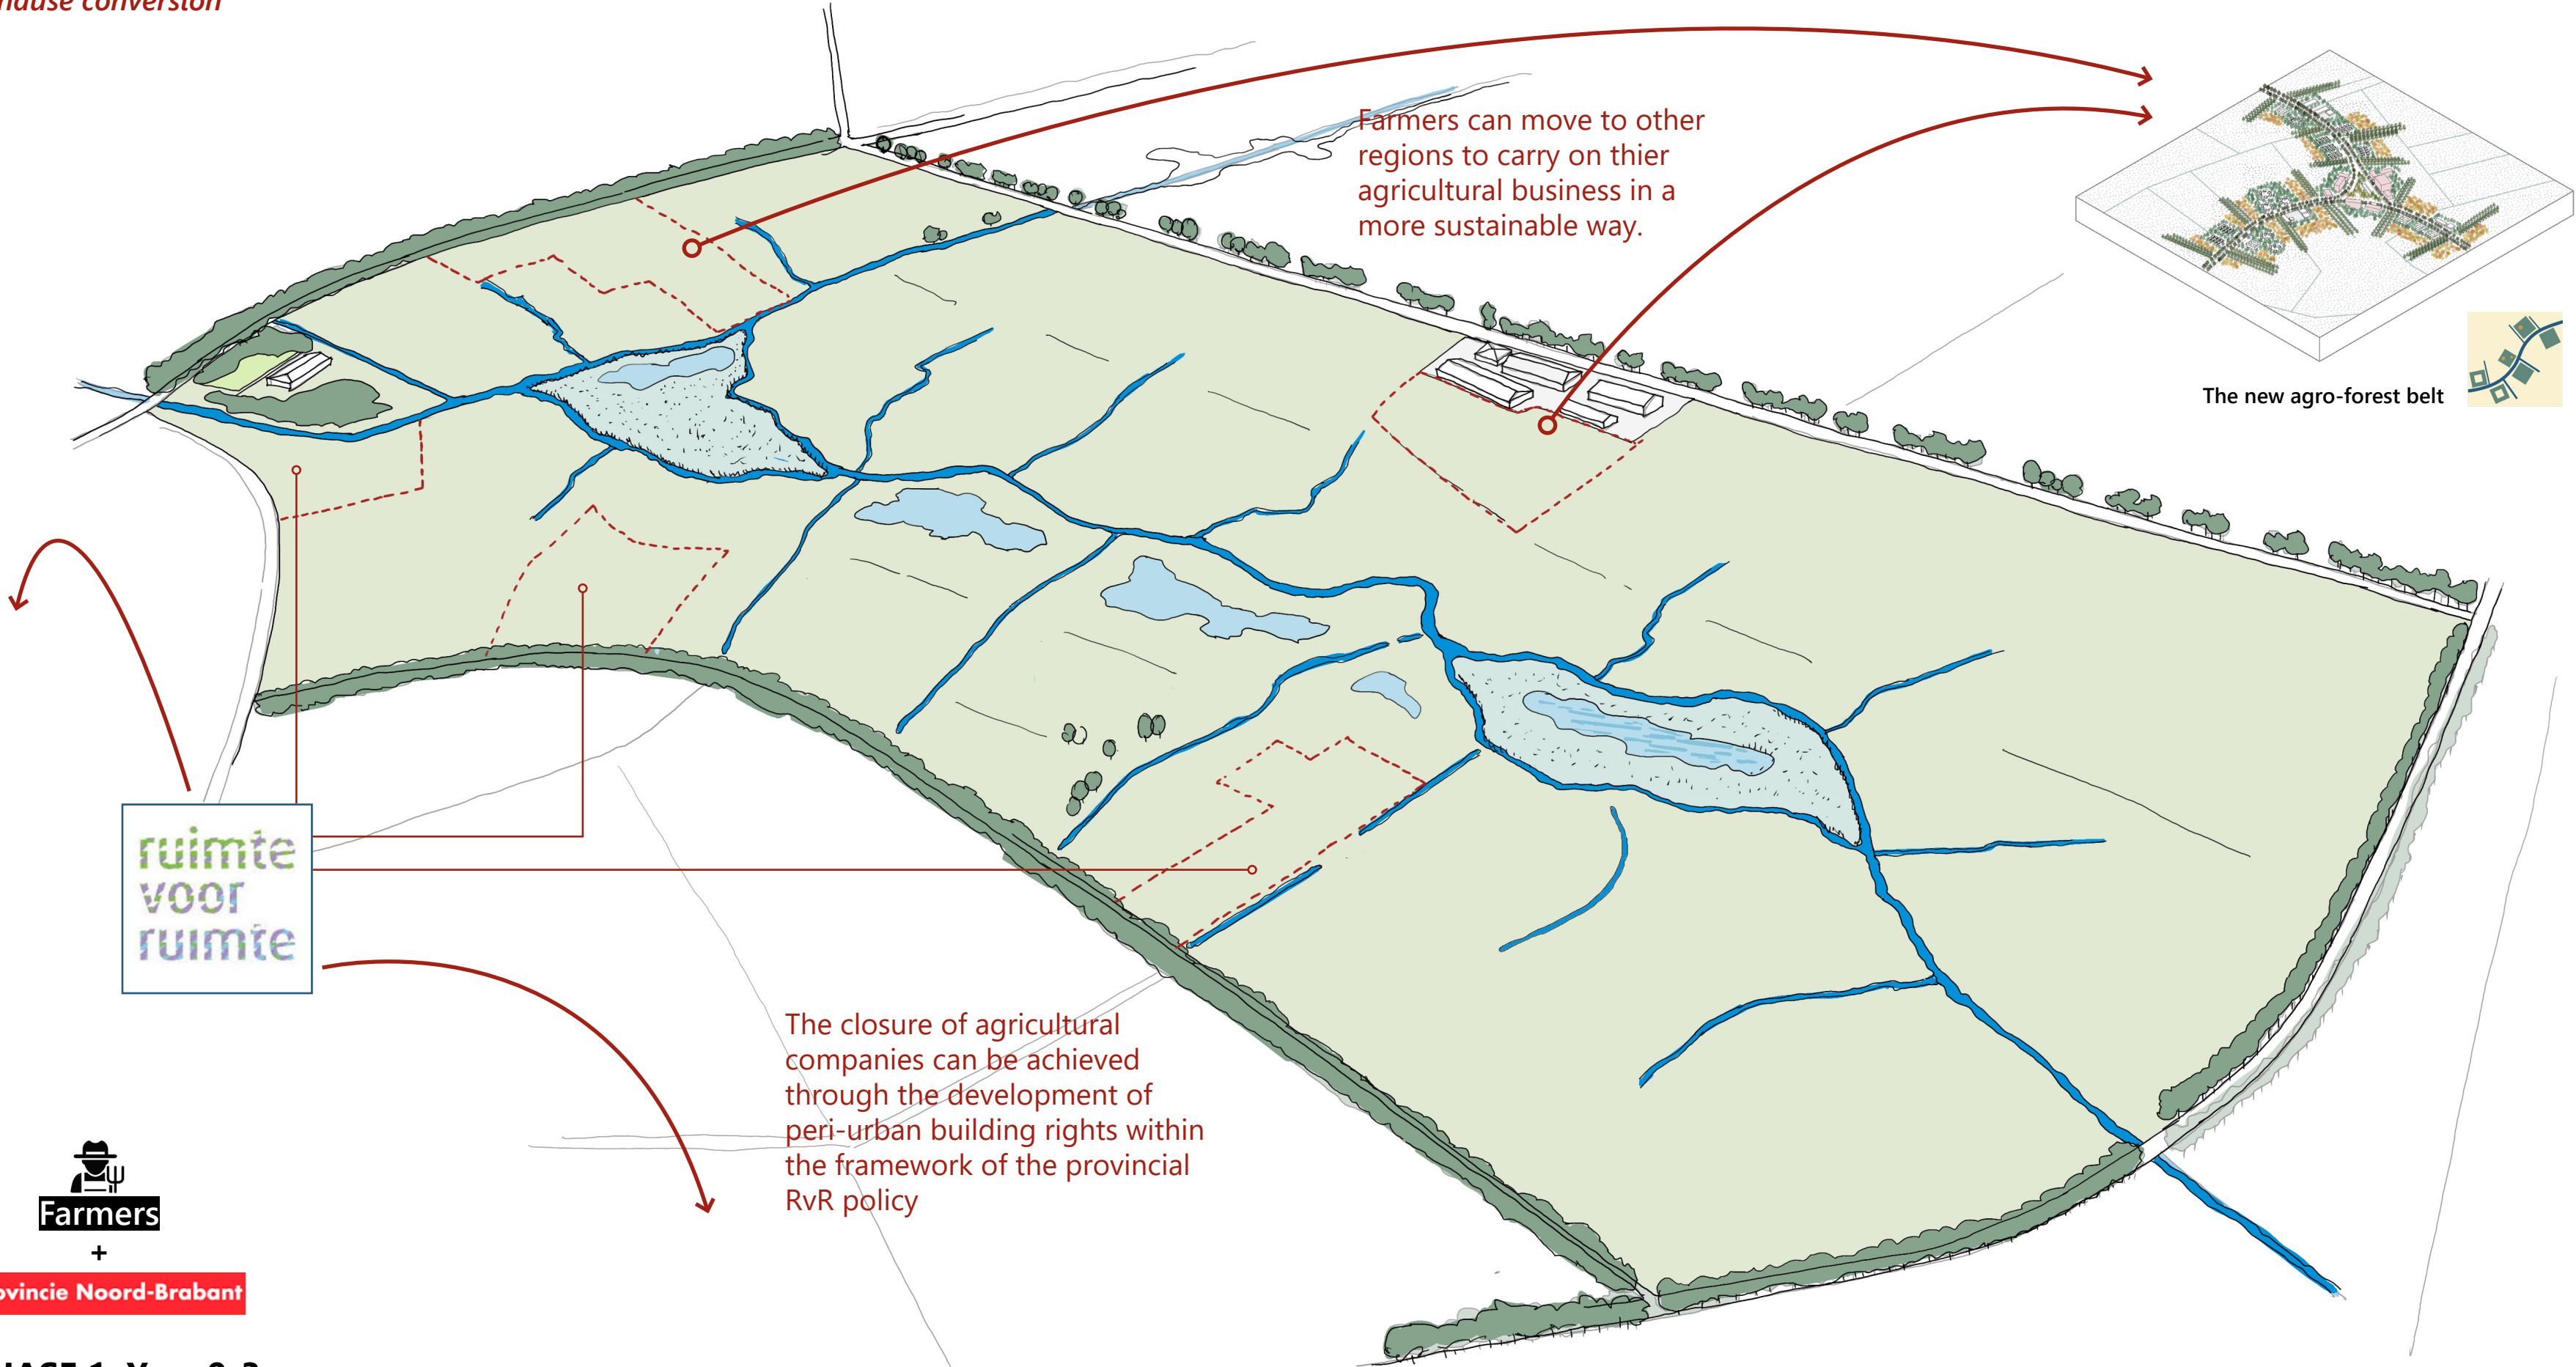

Water Board

PHASE 1: Year 0-3

Landuse conversion

ruimte  
voor  
ruimte

Farmers can move to other  
regions to carry on thier  
agricultural business in a  
more sustainable way.

The new agro-forest belt

The closure of agricultural  
companies can be achieved  
through the development of  
peri-urban building rights within  
the framework of the provincial  
RvR policy

+

Provincie Noord-Brabant

PHASE 1: Year 0-3

Establishing a forest framework that is critical to the streamvalley's landscape identity

Improvement of water retention ability

Create water storage areas further away from the stream and connect to the stream via ditches instead of creating extensive wet areas.

Ongoing water level management

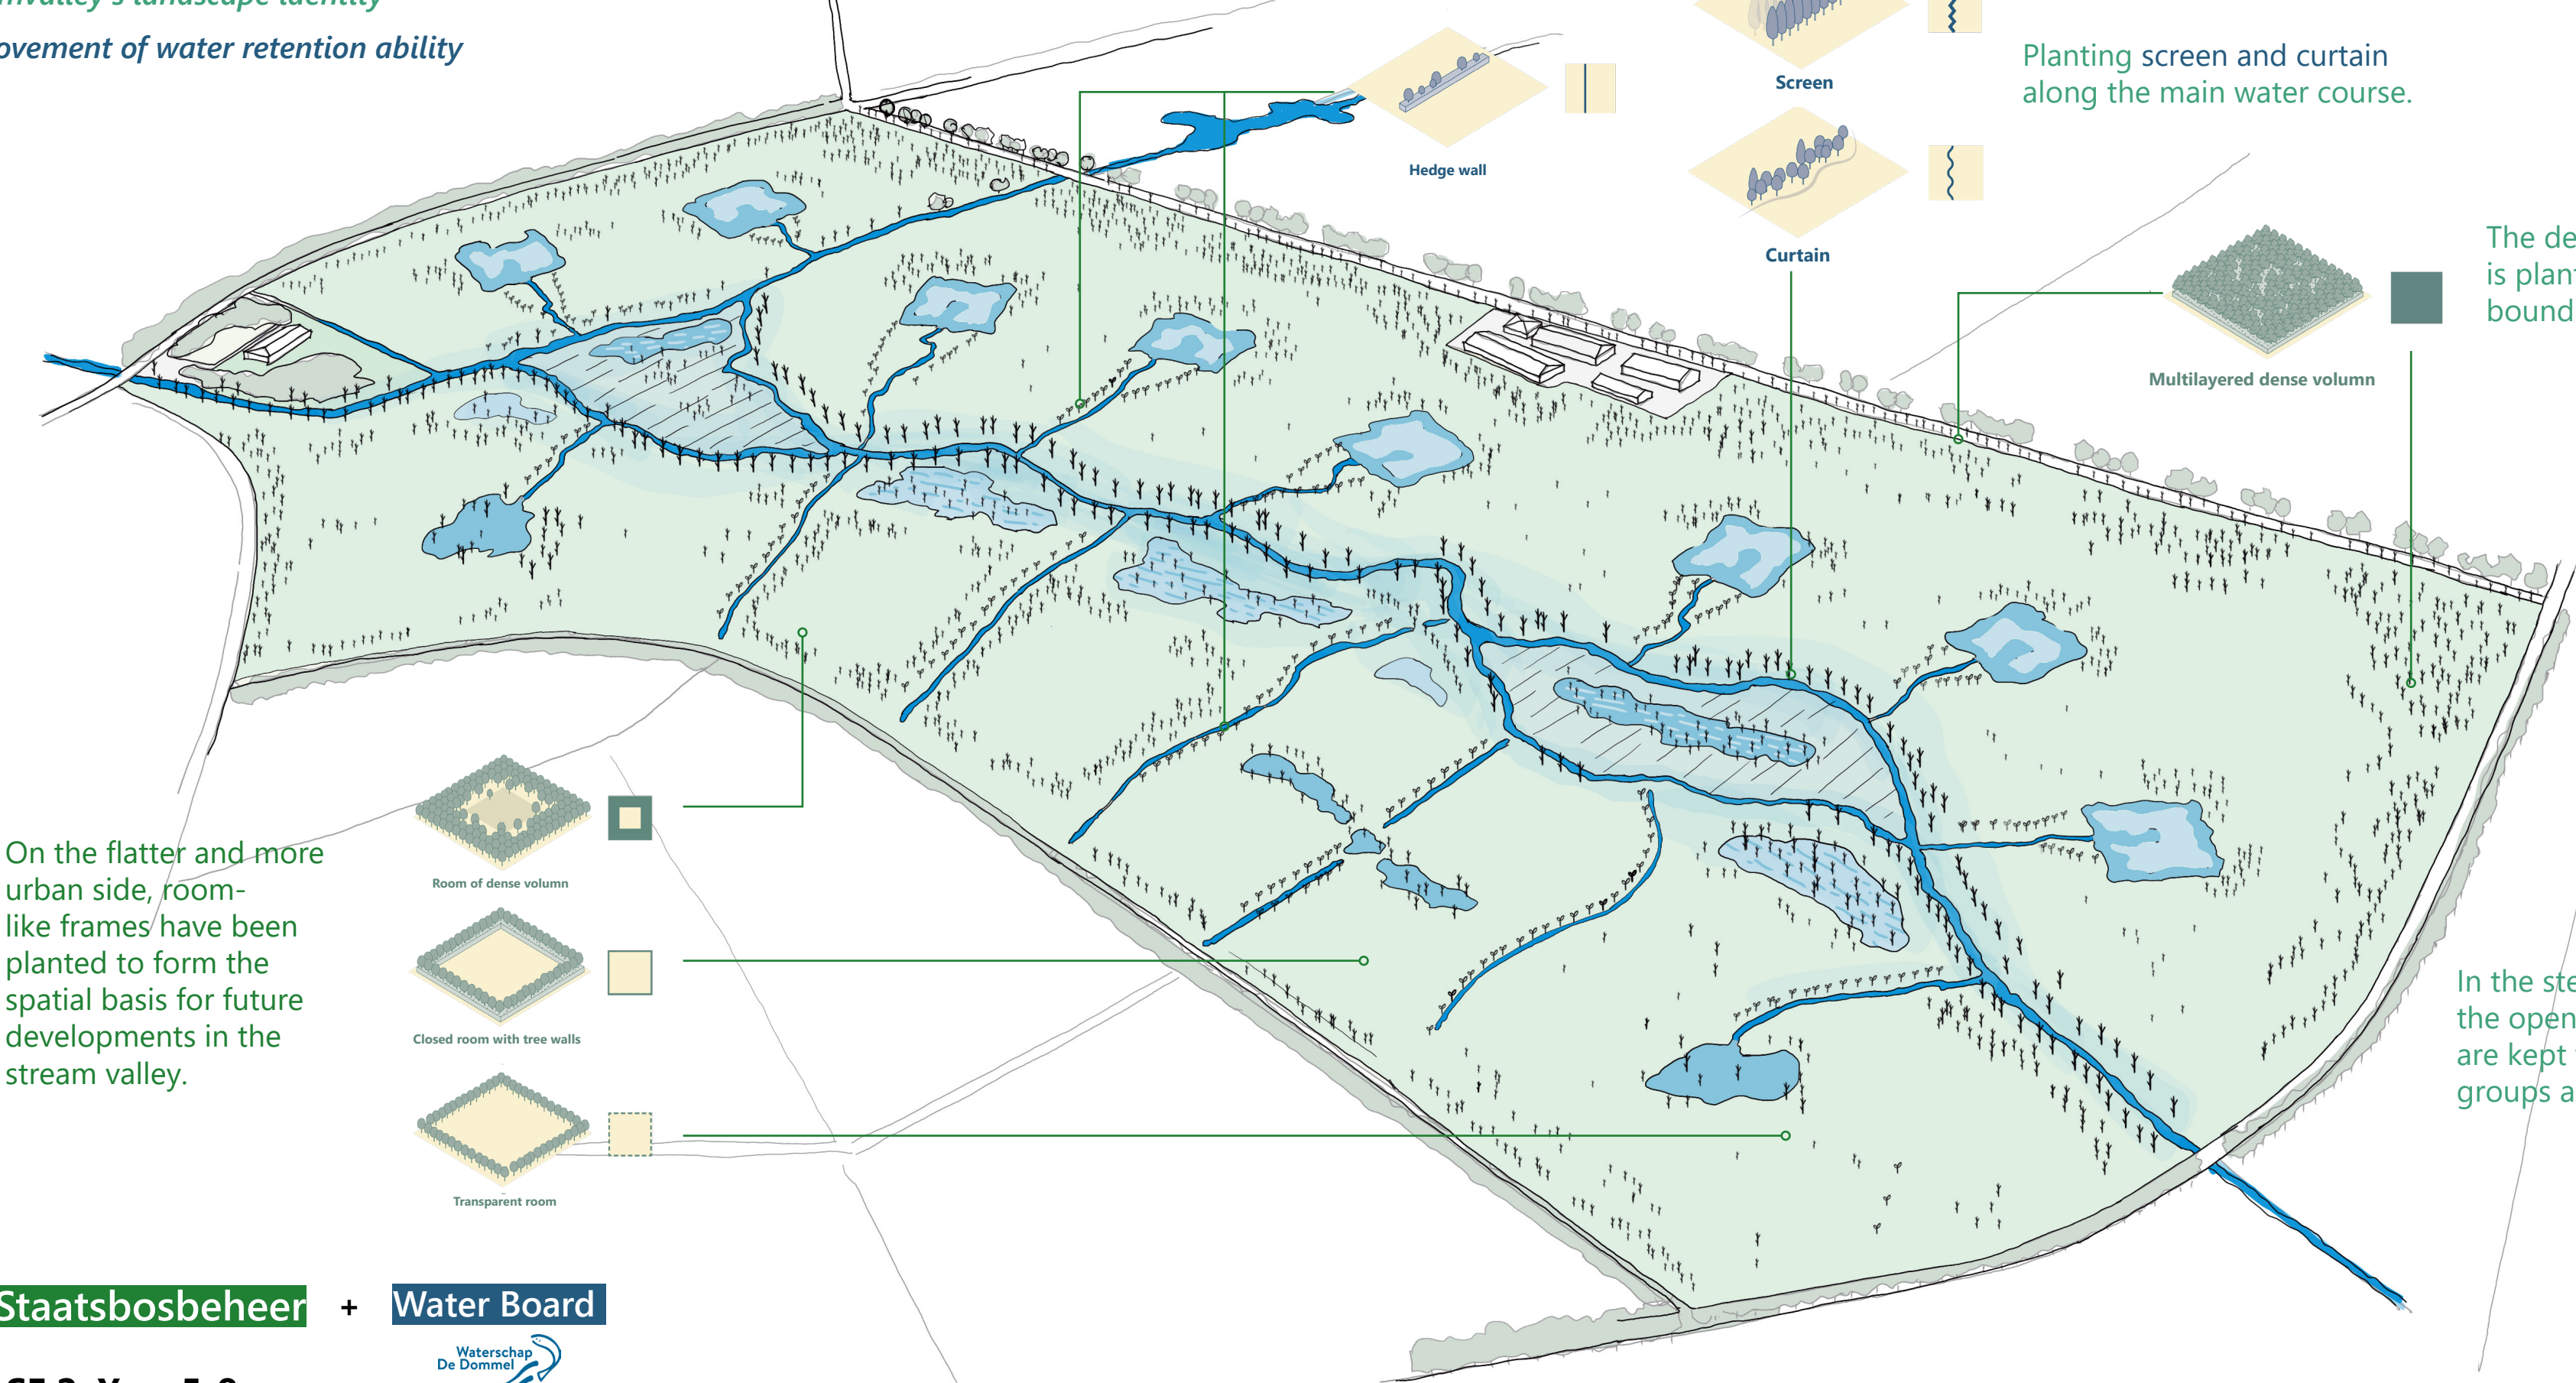

Establishing a forest framework that is critical to the streamvalley's landscape identity

Improvement of water retention ability

Planting hedge wall along the ditches.

Planting screen and curtain along the main water course.

The dense forest frame is planted along the boundary.

On the flatter and more urban side, room-like frames have been planted to form the spatial basis for future developments in the stream valley.

In the steeper east bank, the openness of meadow are kept with small groups and single trees.

## Municipality

The municipality leads the development of new housing, and in order for the project to run smoothly, the types of housing are mixed, with single-family houses, flats and affordable housing

## Staatsbosbeheer

## Volunteers

SBB and volunteer organisations with specialist knowledge will continue to provide maintenance for the high ecological value forests in the stream valleys

Participatory management by the new inhabitants of the woodland surrounding their houses, creating diverse spaces based on the basic forest framework

## Residents

ongoing 1/3year 1/year  
Collective woodland and paludiculture food garden

1/10year  
Trees in the open meadow

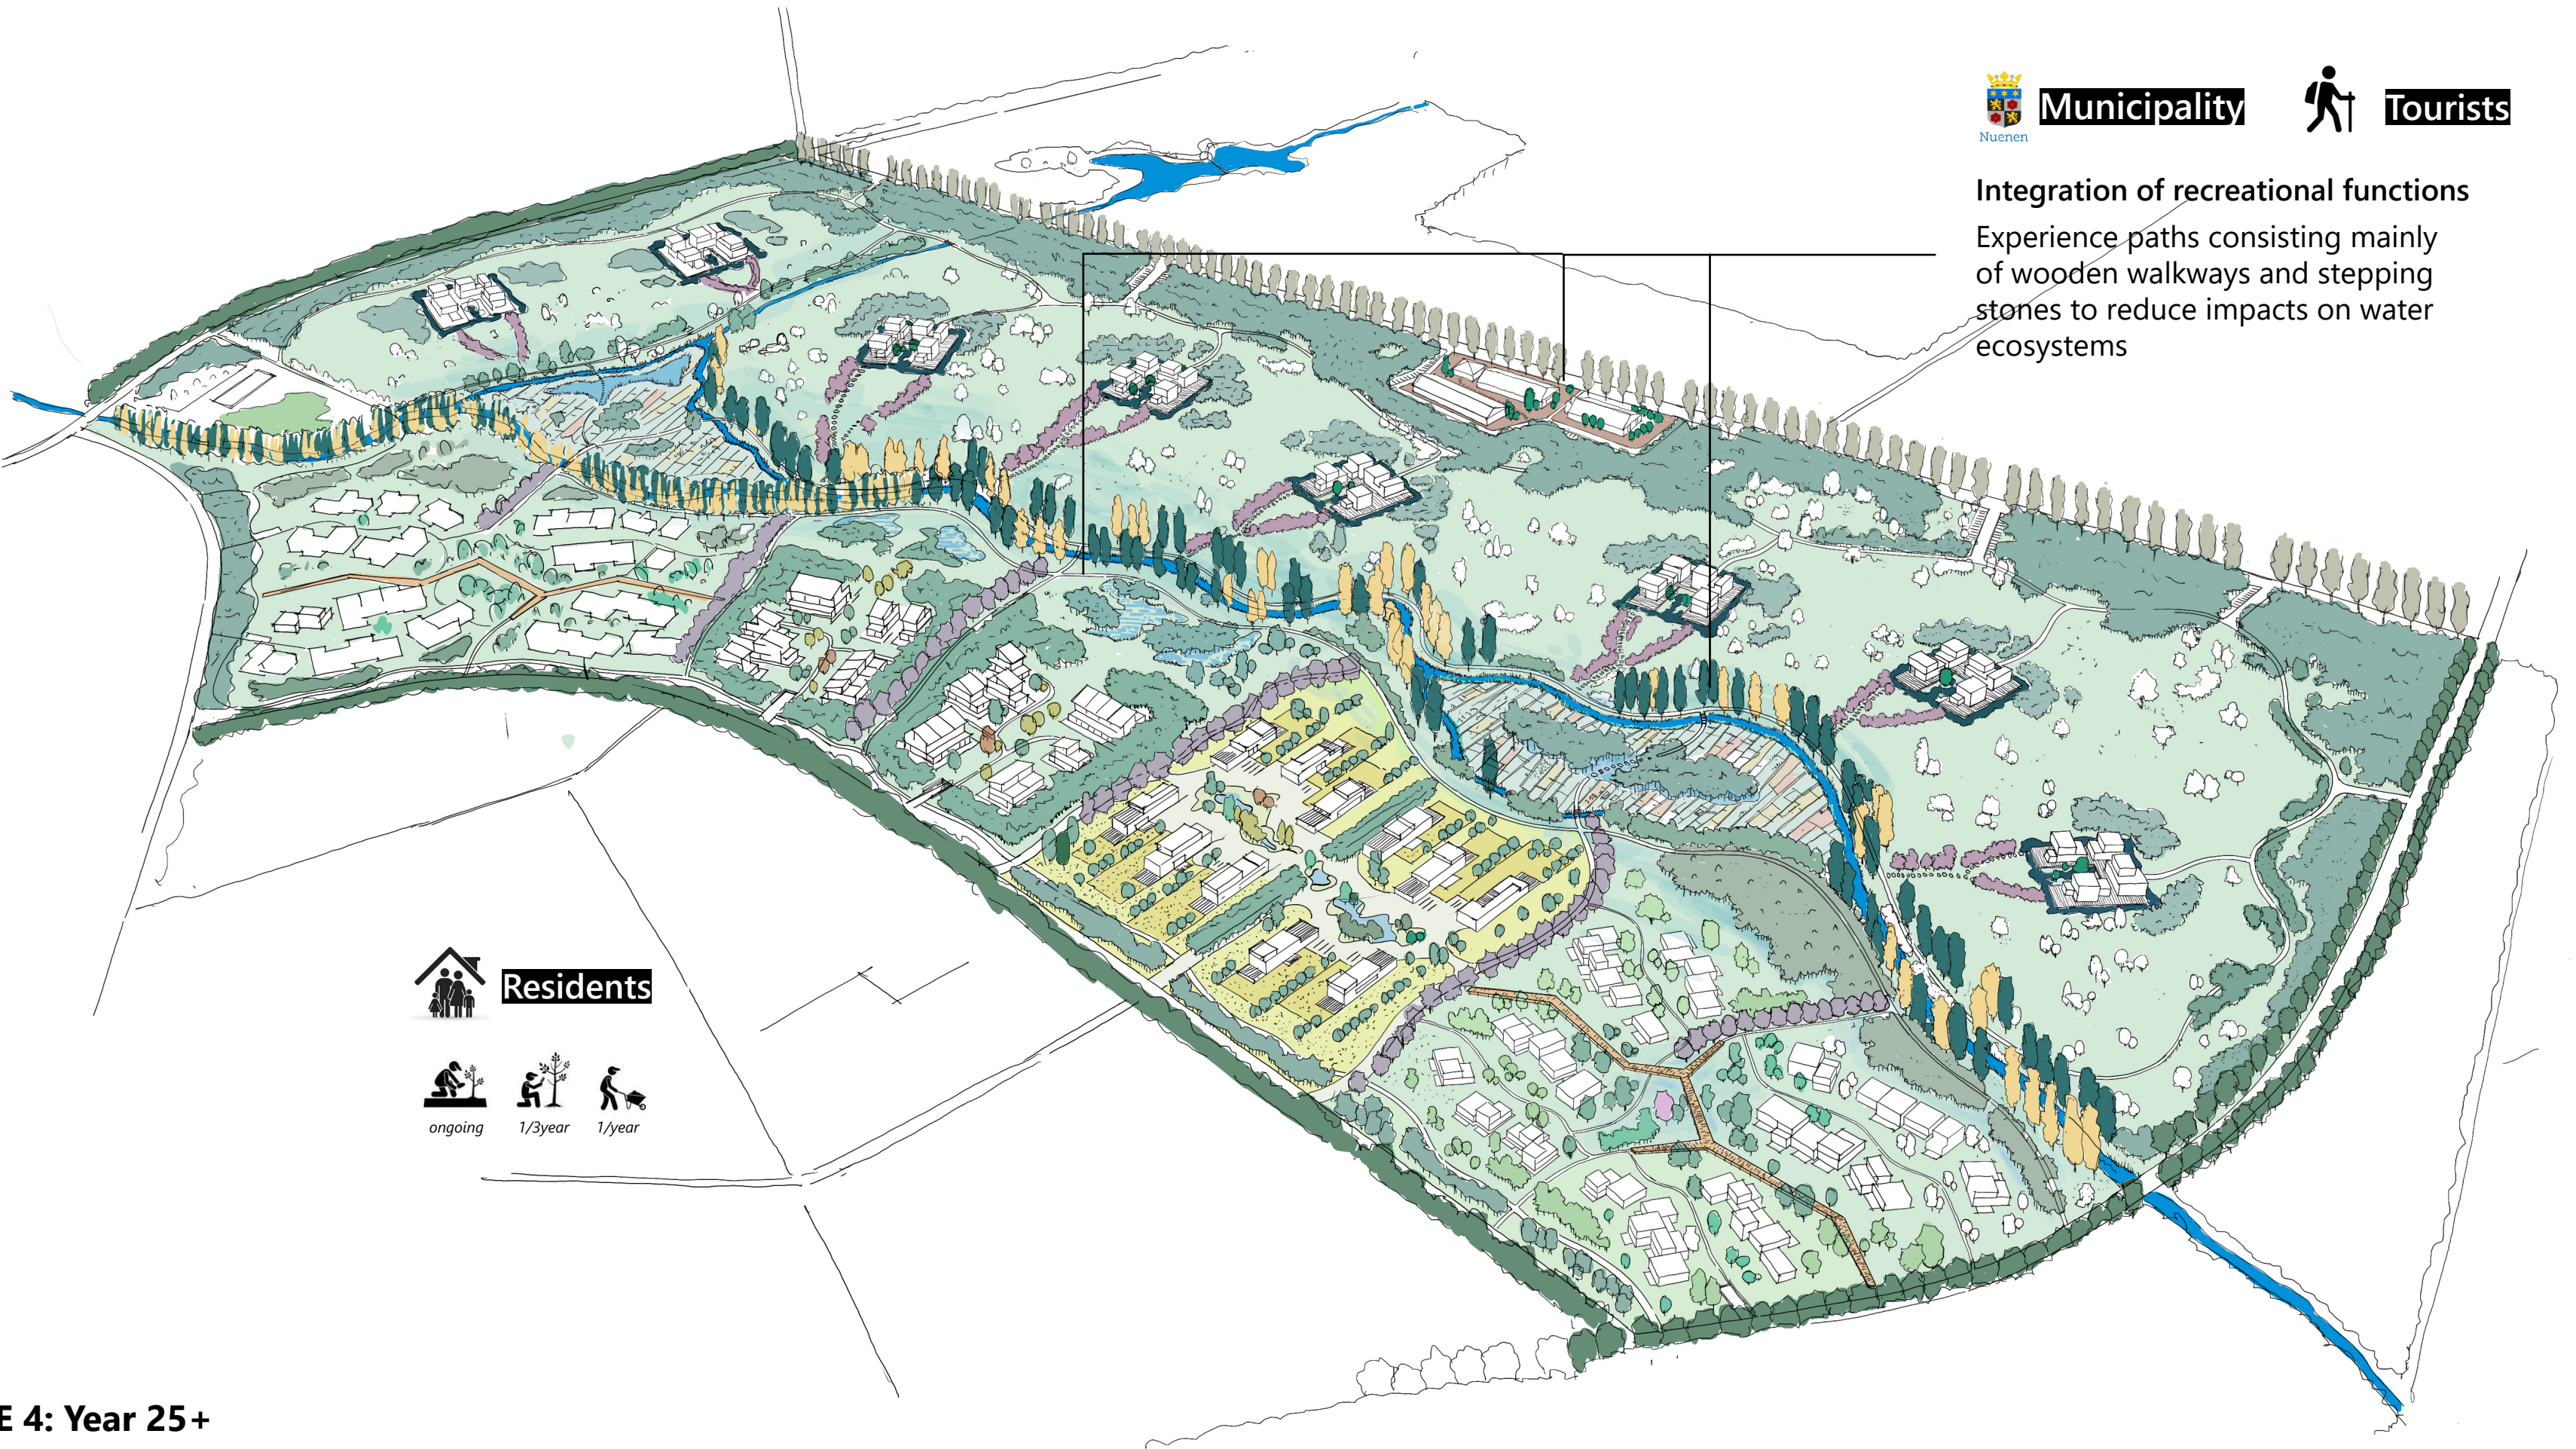

1/3year  
Stream poplar tree and ditch hedge

1/5year  
Pioneer stand maturity

## PHASE 3: Year 10-15

**Municipality**

**Tourists**

**Integration of recreational functions**

Experience paths consisting mainly of wooden walkways and stepping stones to reduce impacts on water ecosystems

**Residents**

ongoing

1/3year

1/year

**PHASE 4: Year 25+**

*Alnus glutinosa*

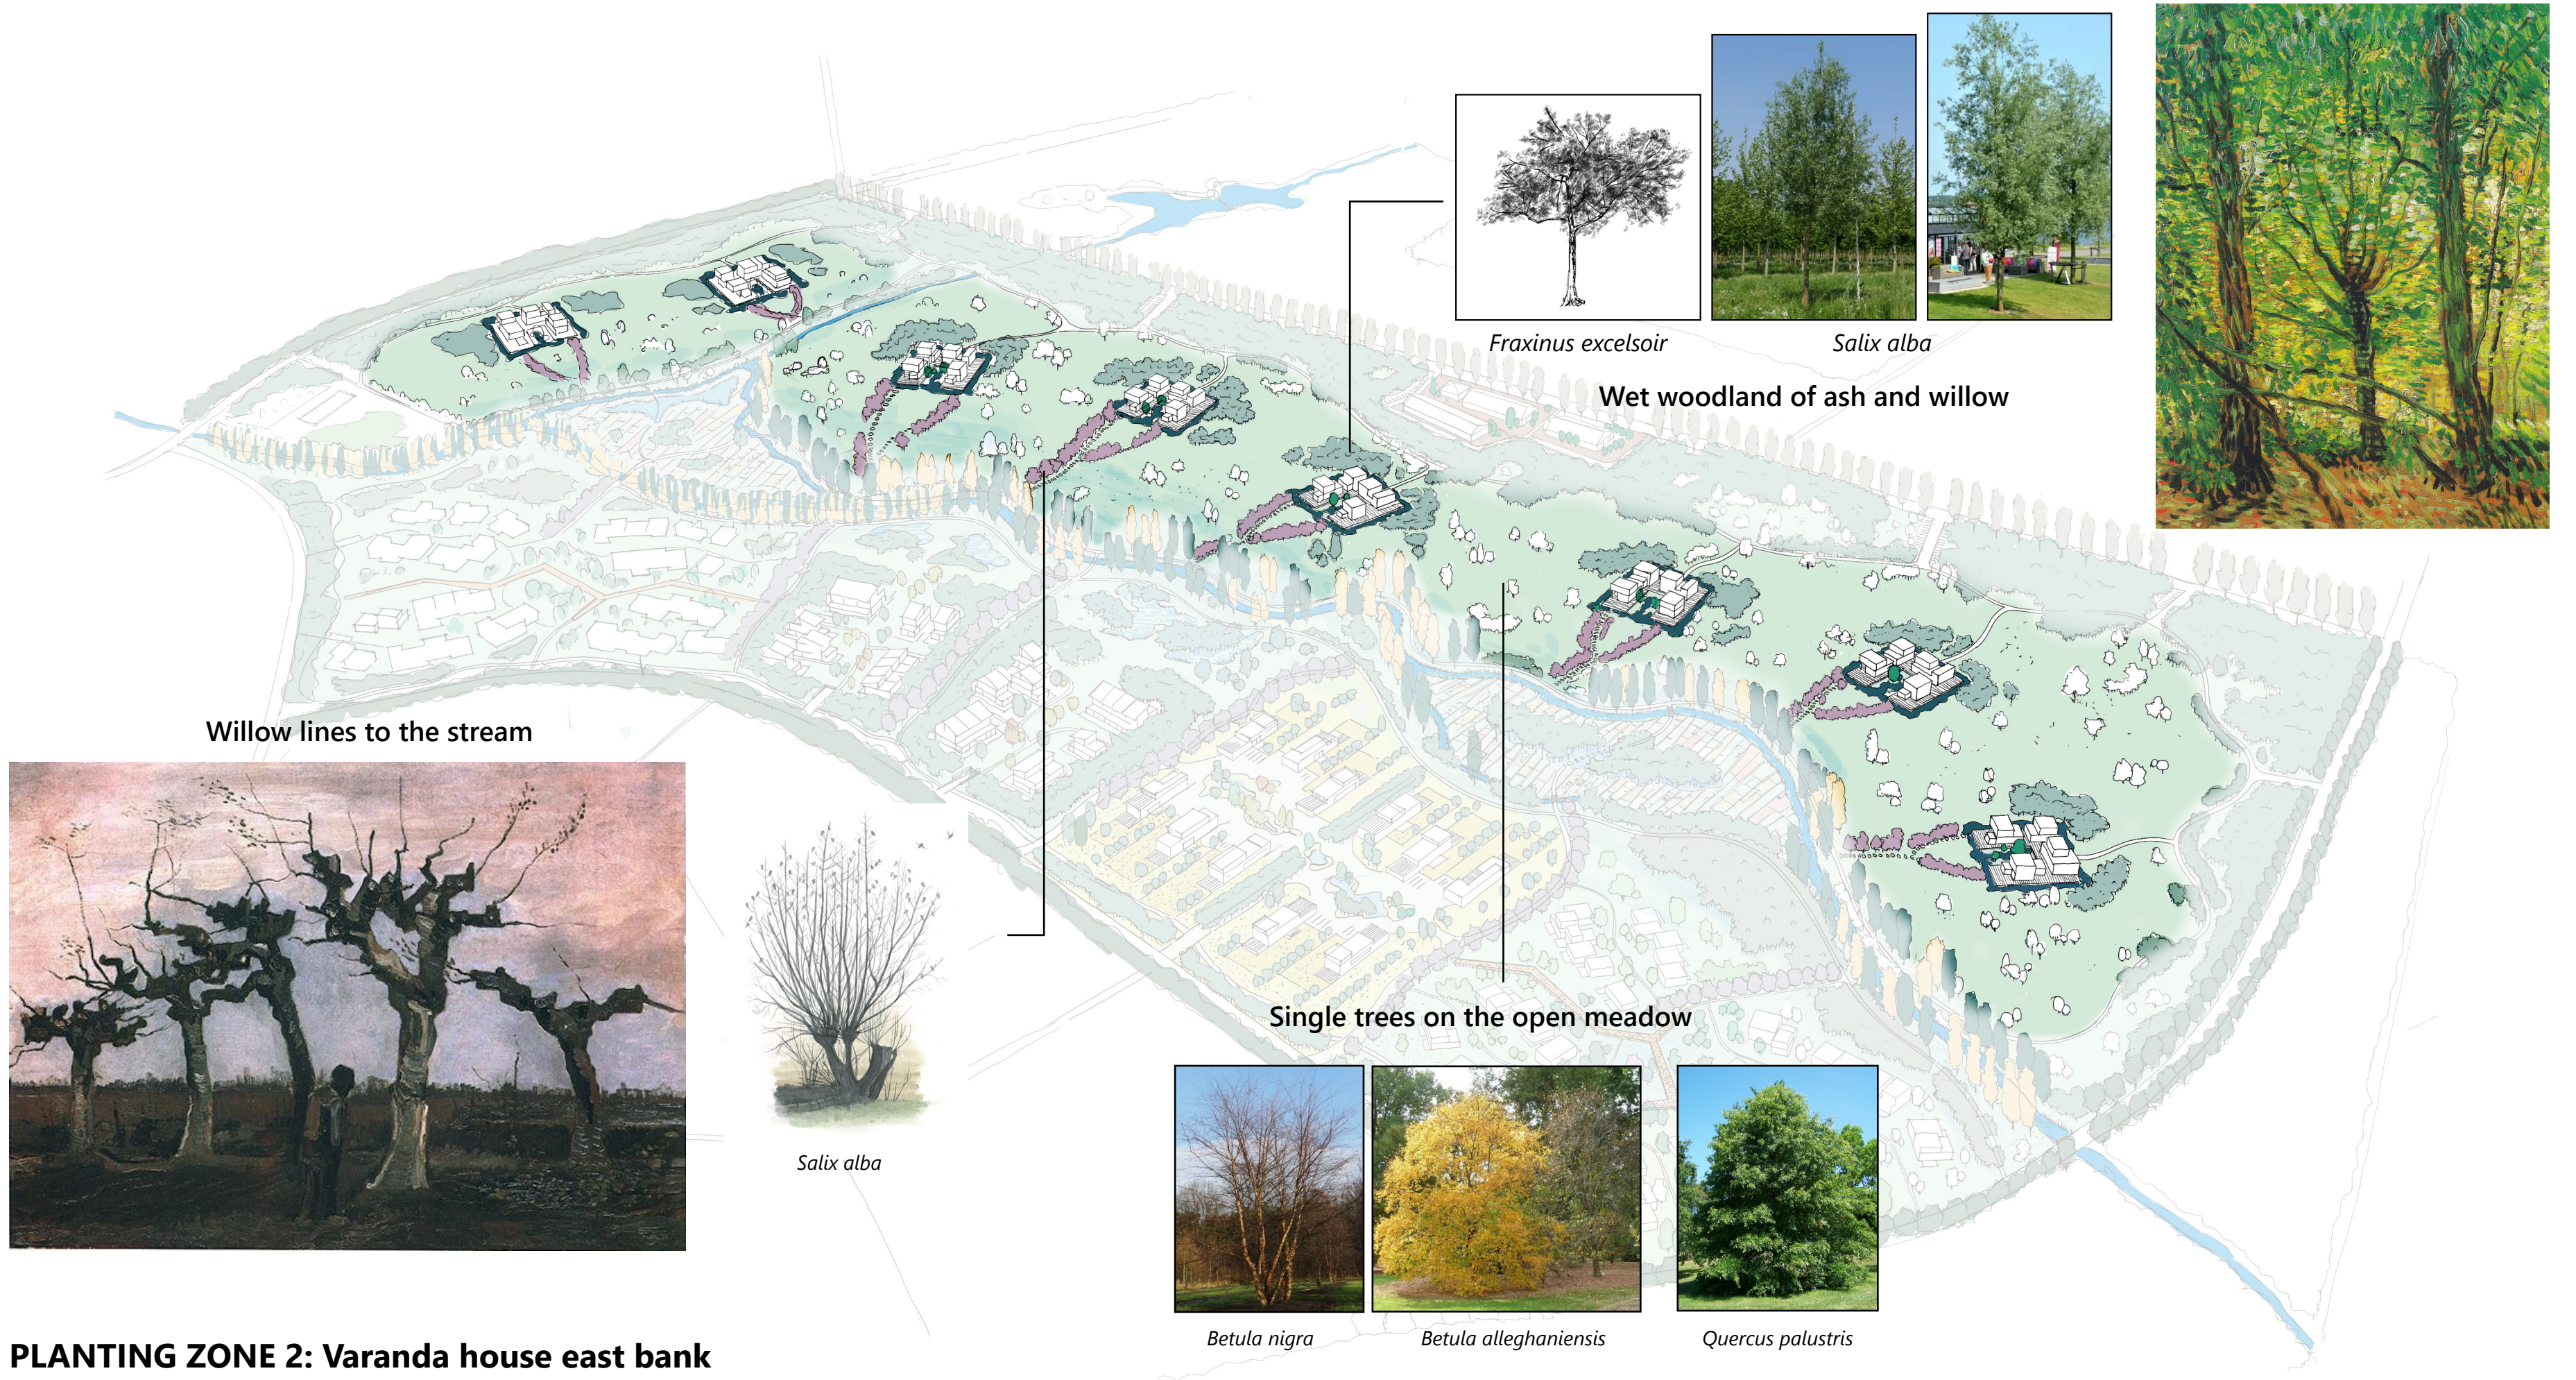

*Populus nigra*  
*Populus canadensis*

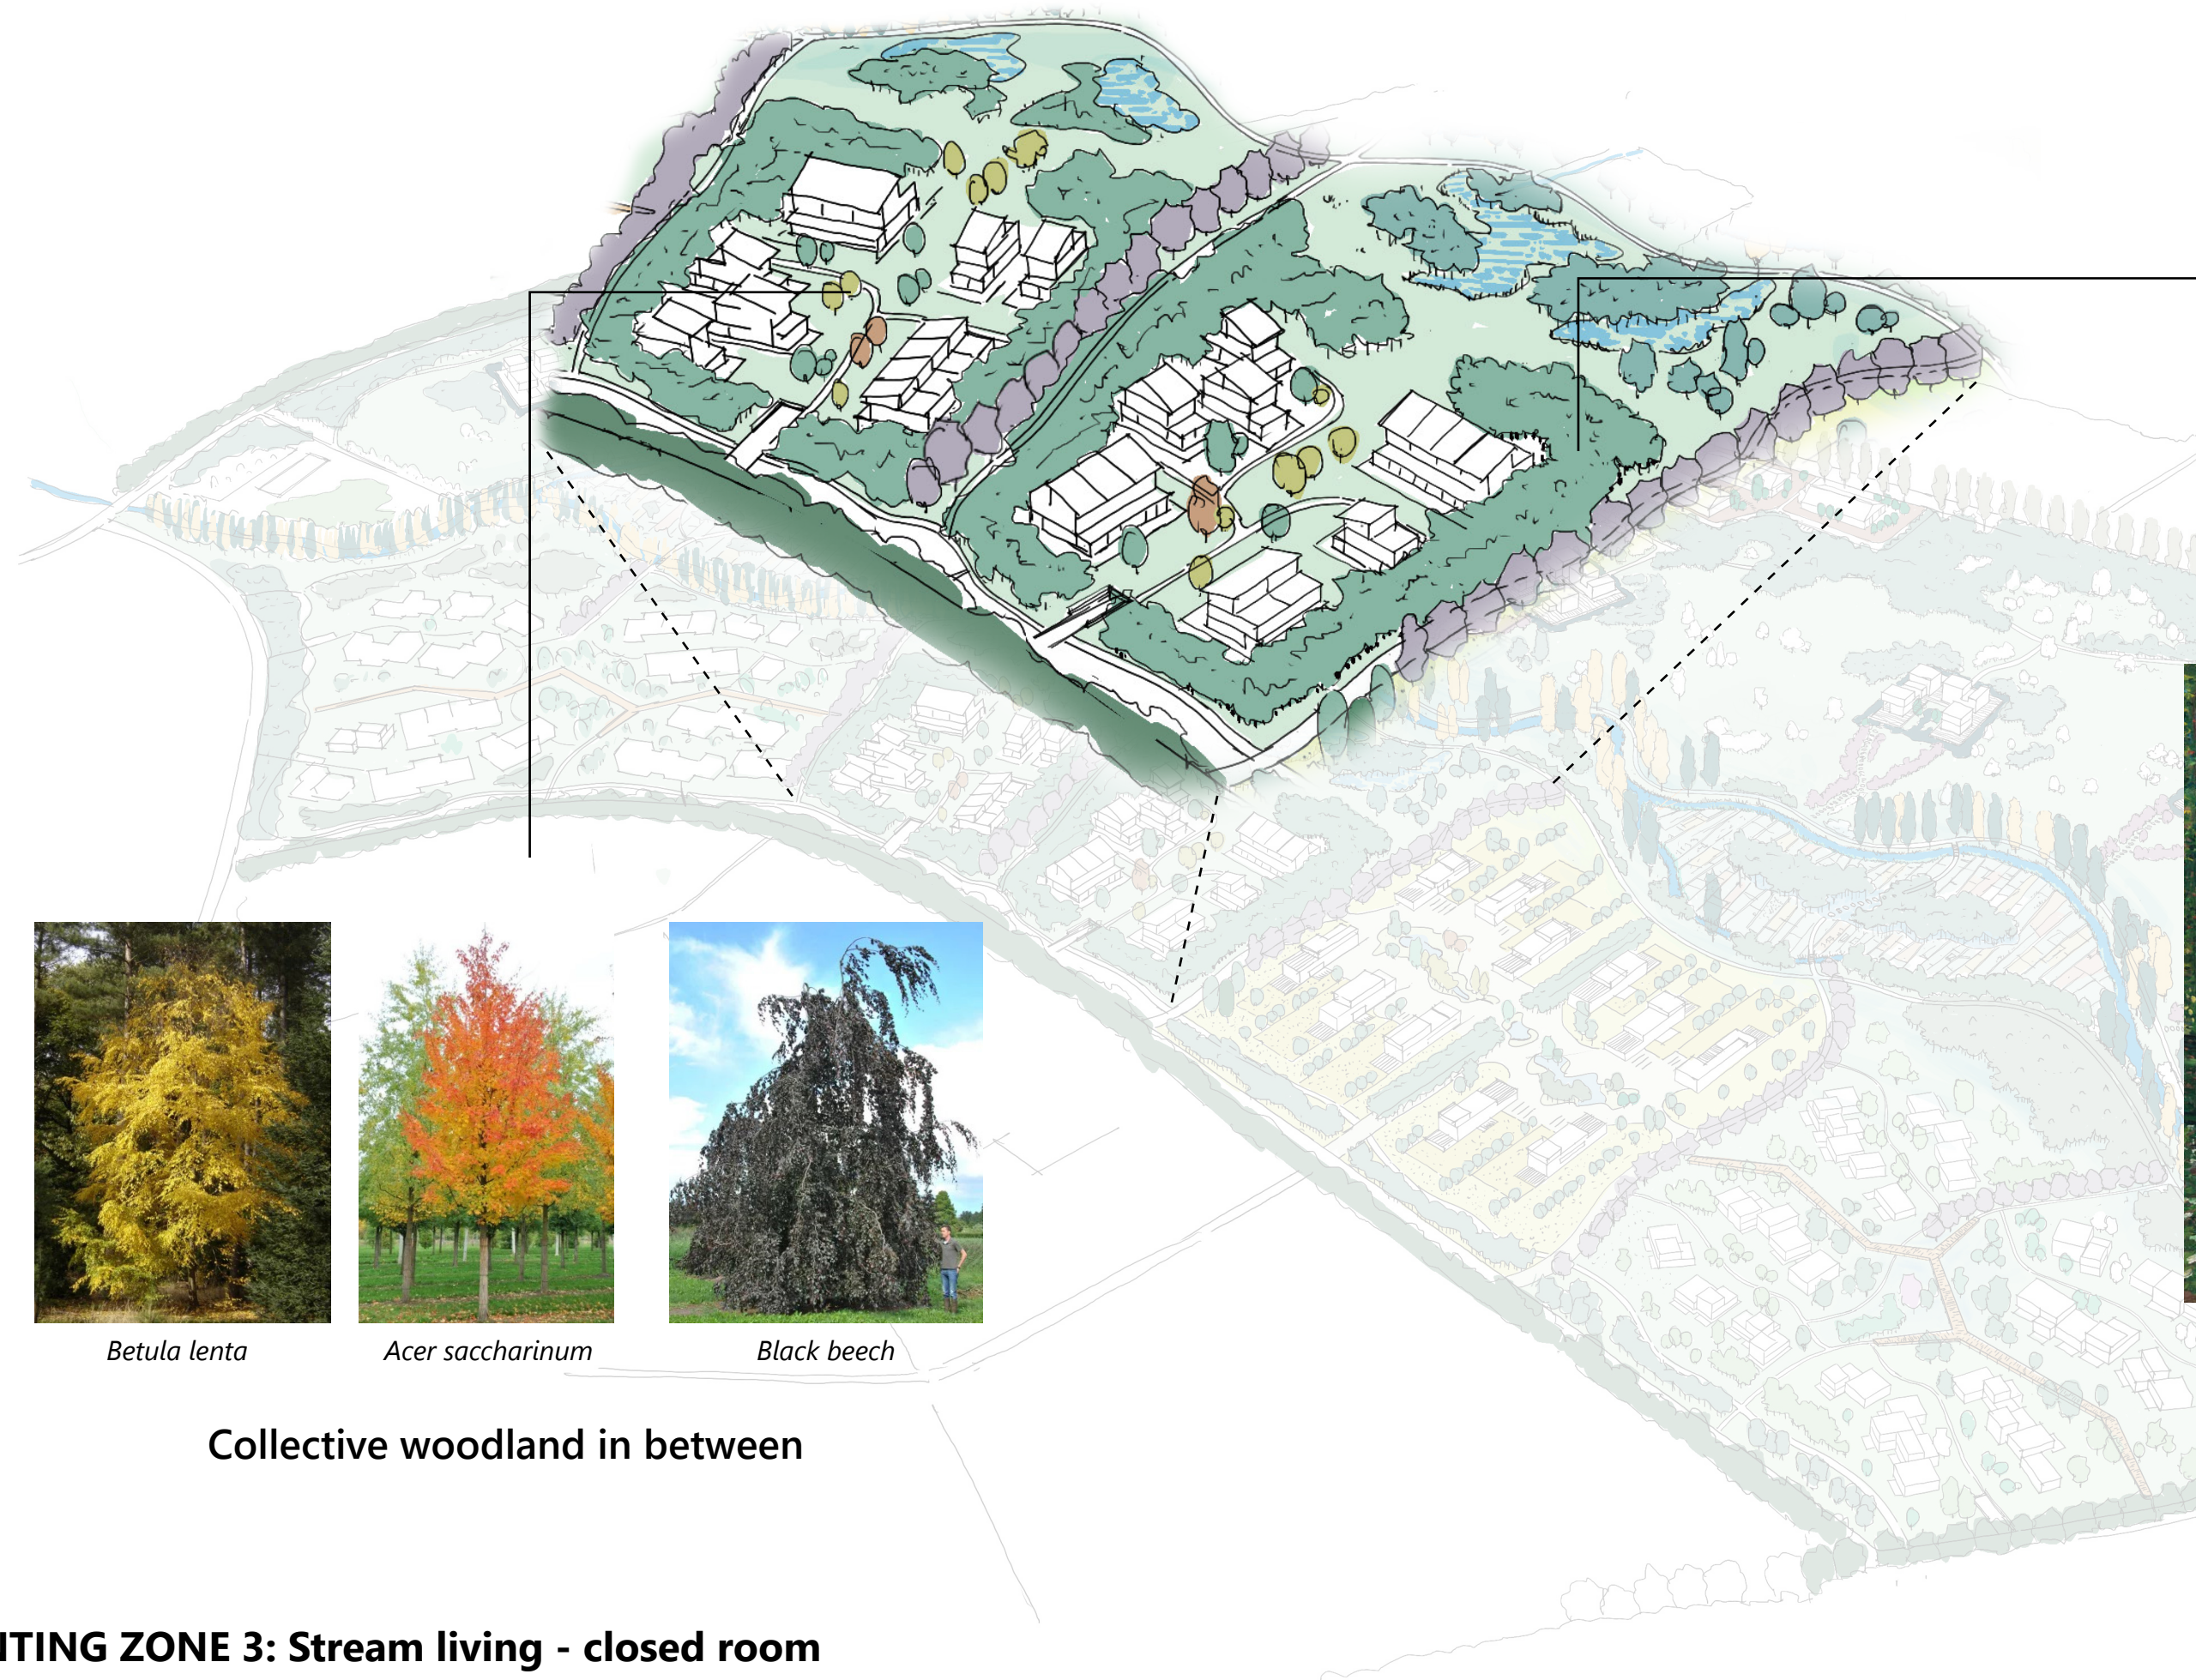

*Taxodium distichum*

**PLANTING ZONE 1: Riparian zone of the stream**

*Betula pendula*

*Quercus palustris*

**Public woodland as frame of rooms**

*Betula lenta*

*Acer saccharinum*

*Black beech*

**Collective woodland in between**

**PLANTING ZONE 3: Stream living - closed room**

The spatial matephor of the narrow agricultural plots

*Alnus incana*

*Alnus incana*

Fruit and colorful trees in public food woodland

*Castanea sativa*

*Malus domestica*

*Prunus domestica*

*Ilex aquifolium*

*Cornus mas*

*Parrotia persica*

*Juglans regia*

*Juglans regia*

PLANTING ZONE 4: Stream living - strip

**PLANTING ZONE 5: Stream living - Flowing**

## Masterplan 1:3000 (in ±30 years)

**Stemp forest in urban patch**  
Collectively managed forest in residential area as communal space and rainwater storage

**Stream valley**  
A legible and meandering stream zone and new scheme of forest-living

**Broek landscape**  
Seasonal Inundable dense forest with water level management

**Broek landscape**  
Vacation house in the broek as recreational destination

**Colissen agriculture landscape**  
Wooded bank and hedge walls in the arable field

**Fringe landscape**  
Allotment garden, food-forest and firework site in the tree rooms

**Fringe landscape**  
Carr forest as reservoir for rainwater storage and purification

**Fringe landscape**  
Prepared dense forest rooms for industry and new workplace

**Reclaimed forest complex**  
Recovery of heathland and fen in coniferous forest, with wooded banks and woodwalk

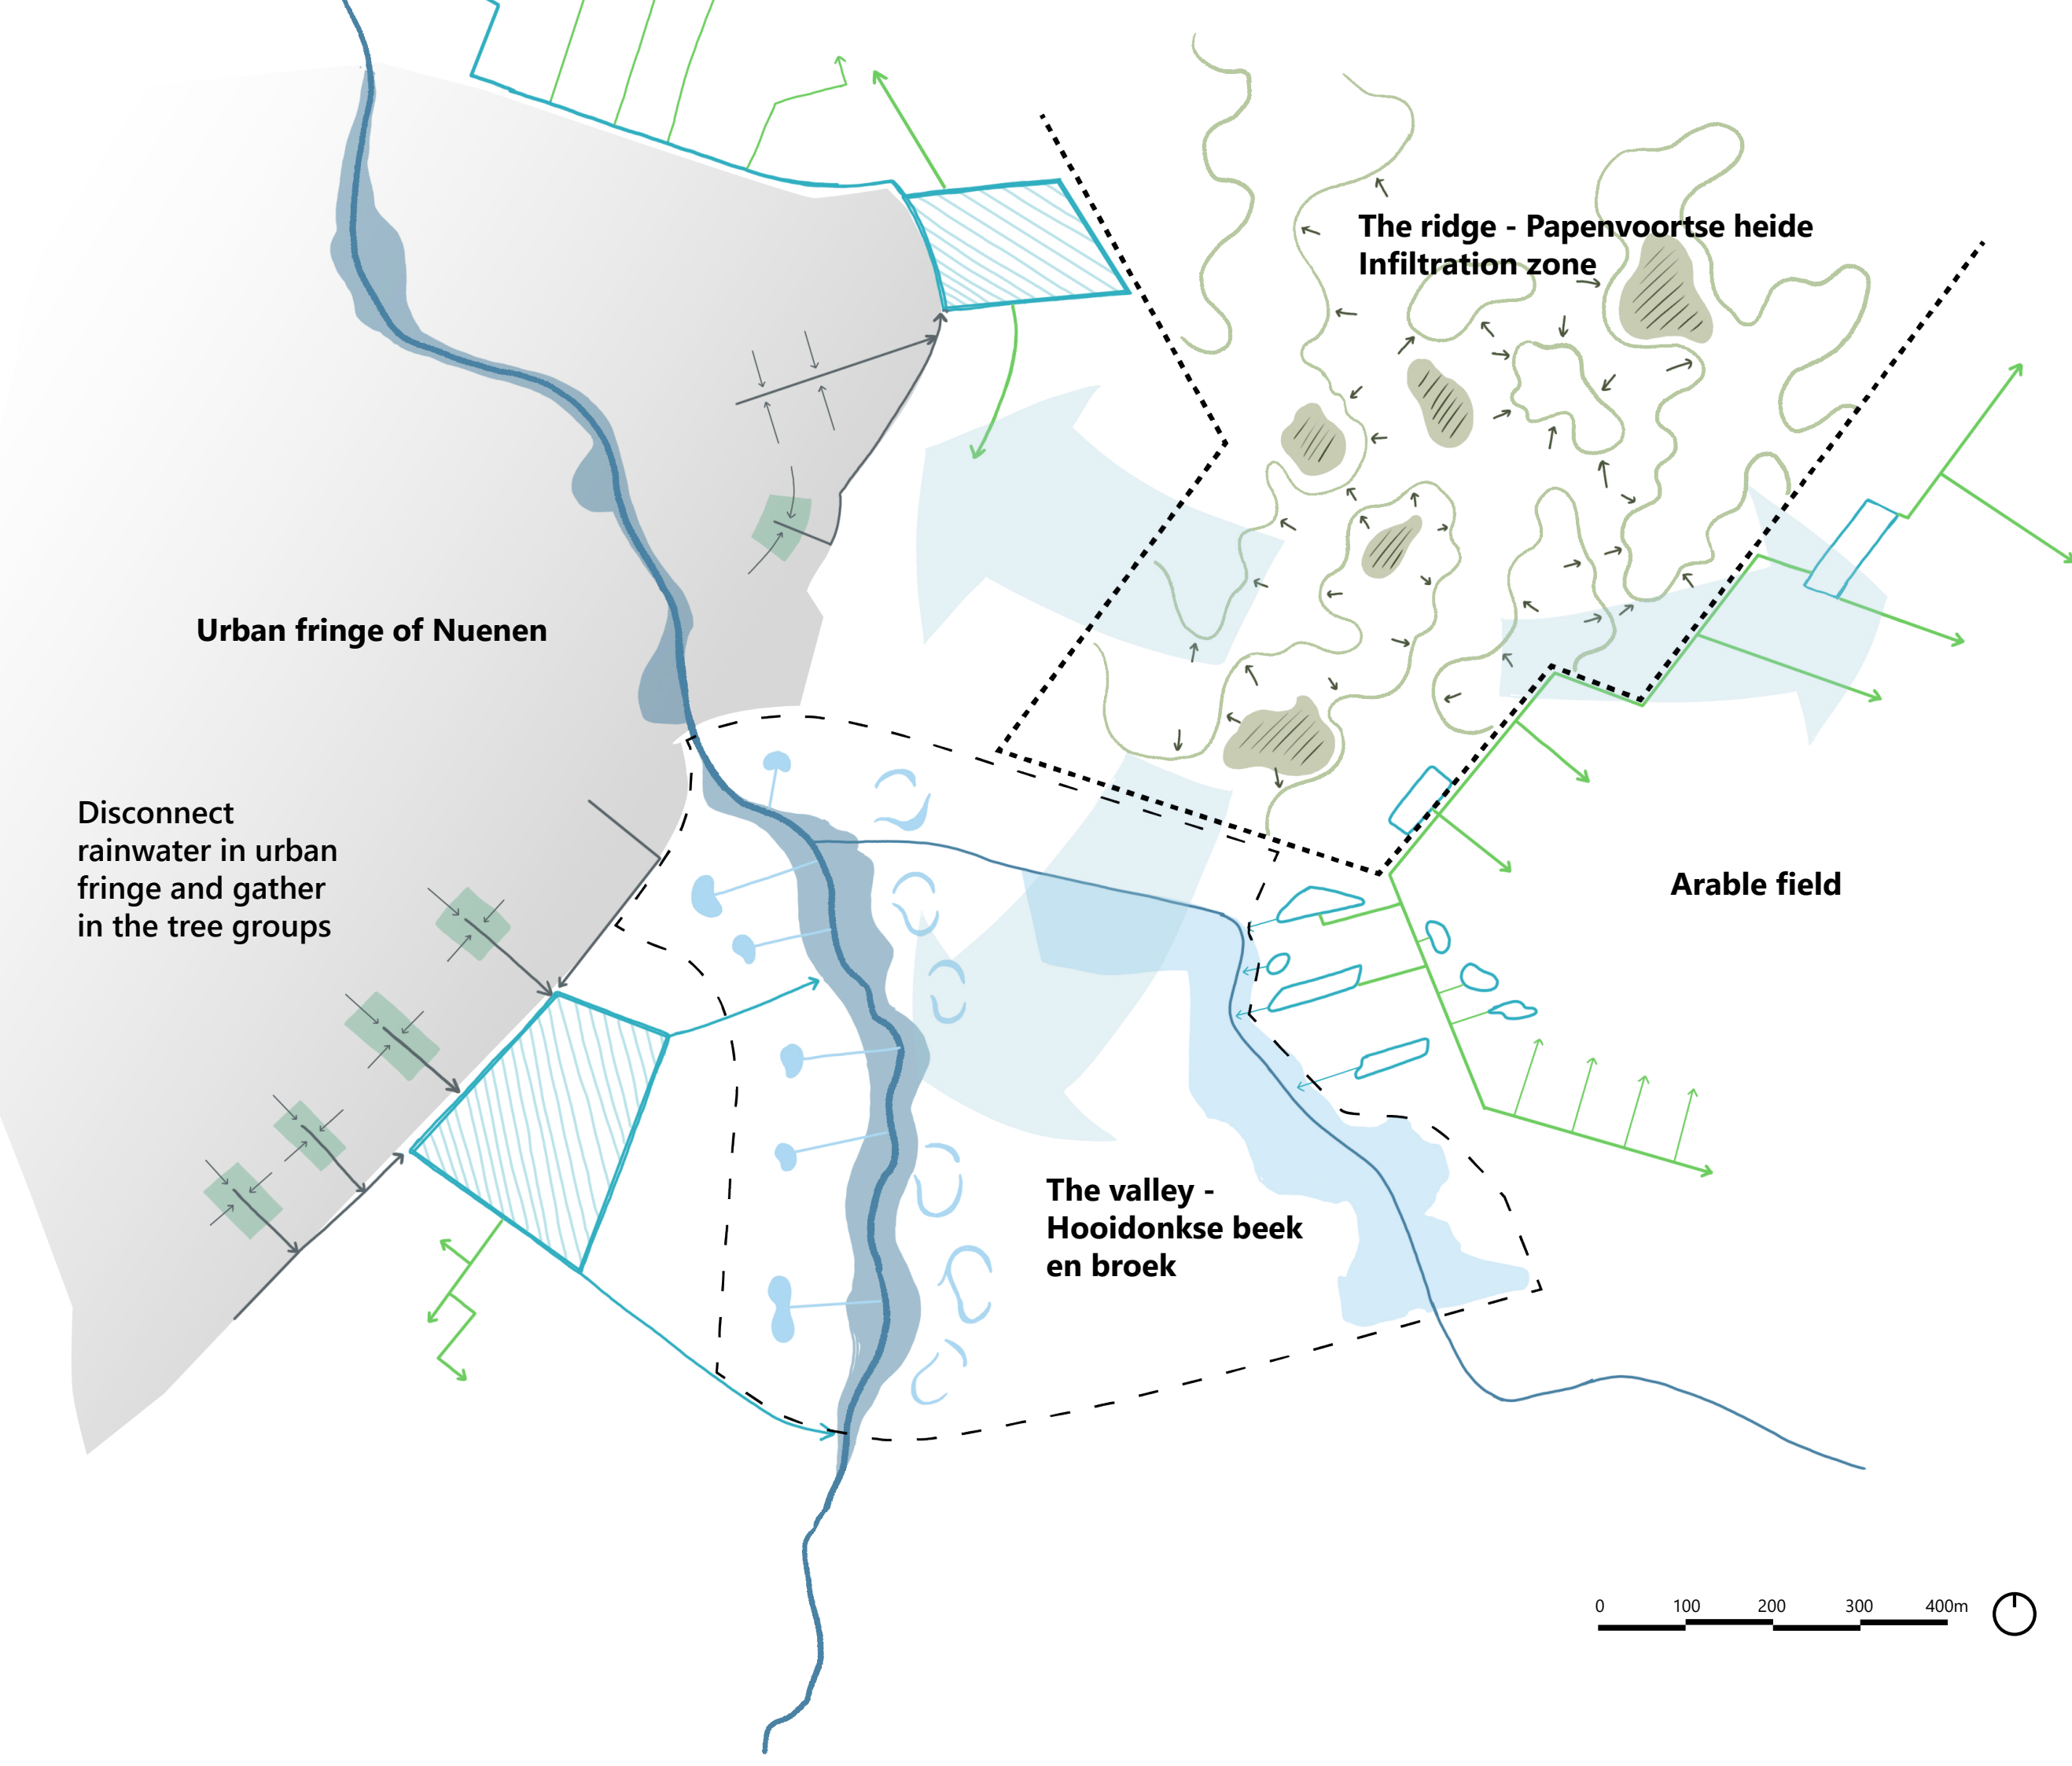

**Reclaimed forest complex**  
Agro-forest lab and camping site in the coniferous forest
