# Real-Time Daylight Analysis Tool for Architectural and Urban Development Using Unreal Engine

Siebren Meines

student # 4880412

1st supervisor: Azarakhsh Rafiee

2nd supervisor: Eleonora Brembilla

Co-reader: Ken Arroyo Ochori

Delegate: Bastiaan van Loenen

July 3, 2023

**Climate Change**

**Emissions from Built  
environment**

**Housing Shortage**

**Lack of user-friendly  
tools**

**Daylight Analysis**

**Health**

**Energy efficiency**

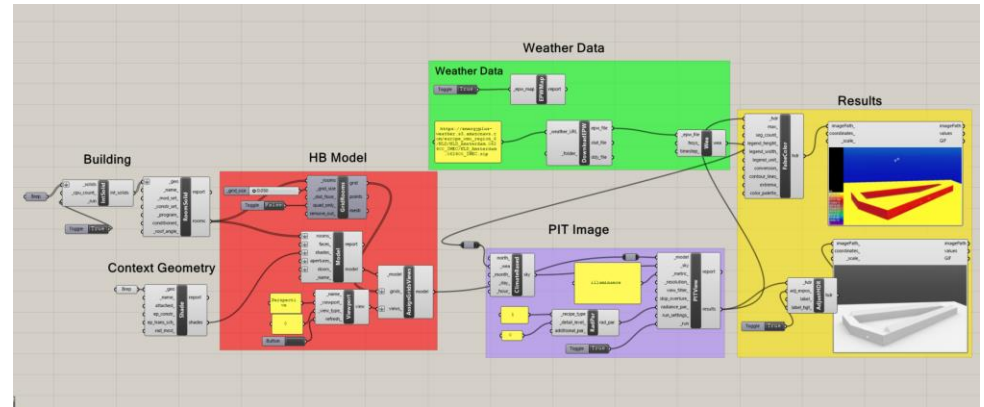

**Temperature**

- Mathematical representations of the sky
  - position
  - sky type
  - atmospheric conditions
- Components of Sky Models
  - Sunlight: Direct sun light
  - Skylight: Diffuse sky light
- Two main simulation techniques
  - Raytracing: shooting a ray
  - Probability based Monte Carlo Simulation
- Measurement Units
  - Luminance: Perceived Brightness
  - Illuminance: Amount of on surface

- Radiance
  - Validated daylight model
  - Combines deterministic raytracing and Monte Carlo simulation
- Honeybee
  - Integration with Radiance within Grasshopper
  - Graphical interface
  - Tools for simulating daylighting conditions
  - Slow & complex

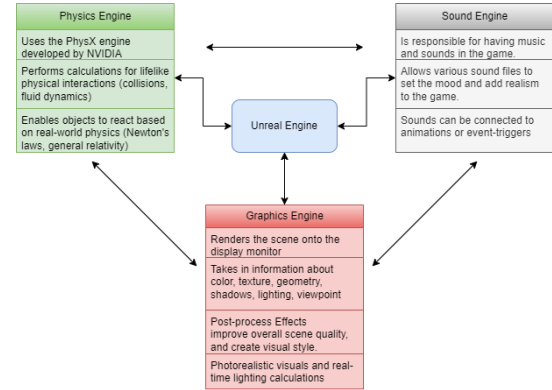

**Honeybee Grasshopper script**

- Traditionally used for game development
- Real-time realistic rendering
- Build in Tools
- 3 main components
- Development vs. Runtime
- Development
  - Blueprints: Visual scripting system
  - C++ coding
  - Hybrid approach

## Components of Unreal Engine

## Realistic Rendering

- Validating Game Engines as a Quantitative Daylighting Simulation Tool (Hegazy et al., 2021):
  - Better accuracy compared to traditional rendering techniques.
  - Realistic and interactive virtual daylit spaces without sacrificing quantitative accuracy.
  - Perception differences between real-life and virtual spaces.
  - Game engines have potential as valuable tools for daylighting simulation and should be further validated and adopted in research.

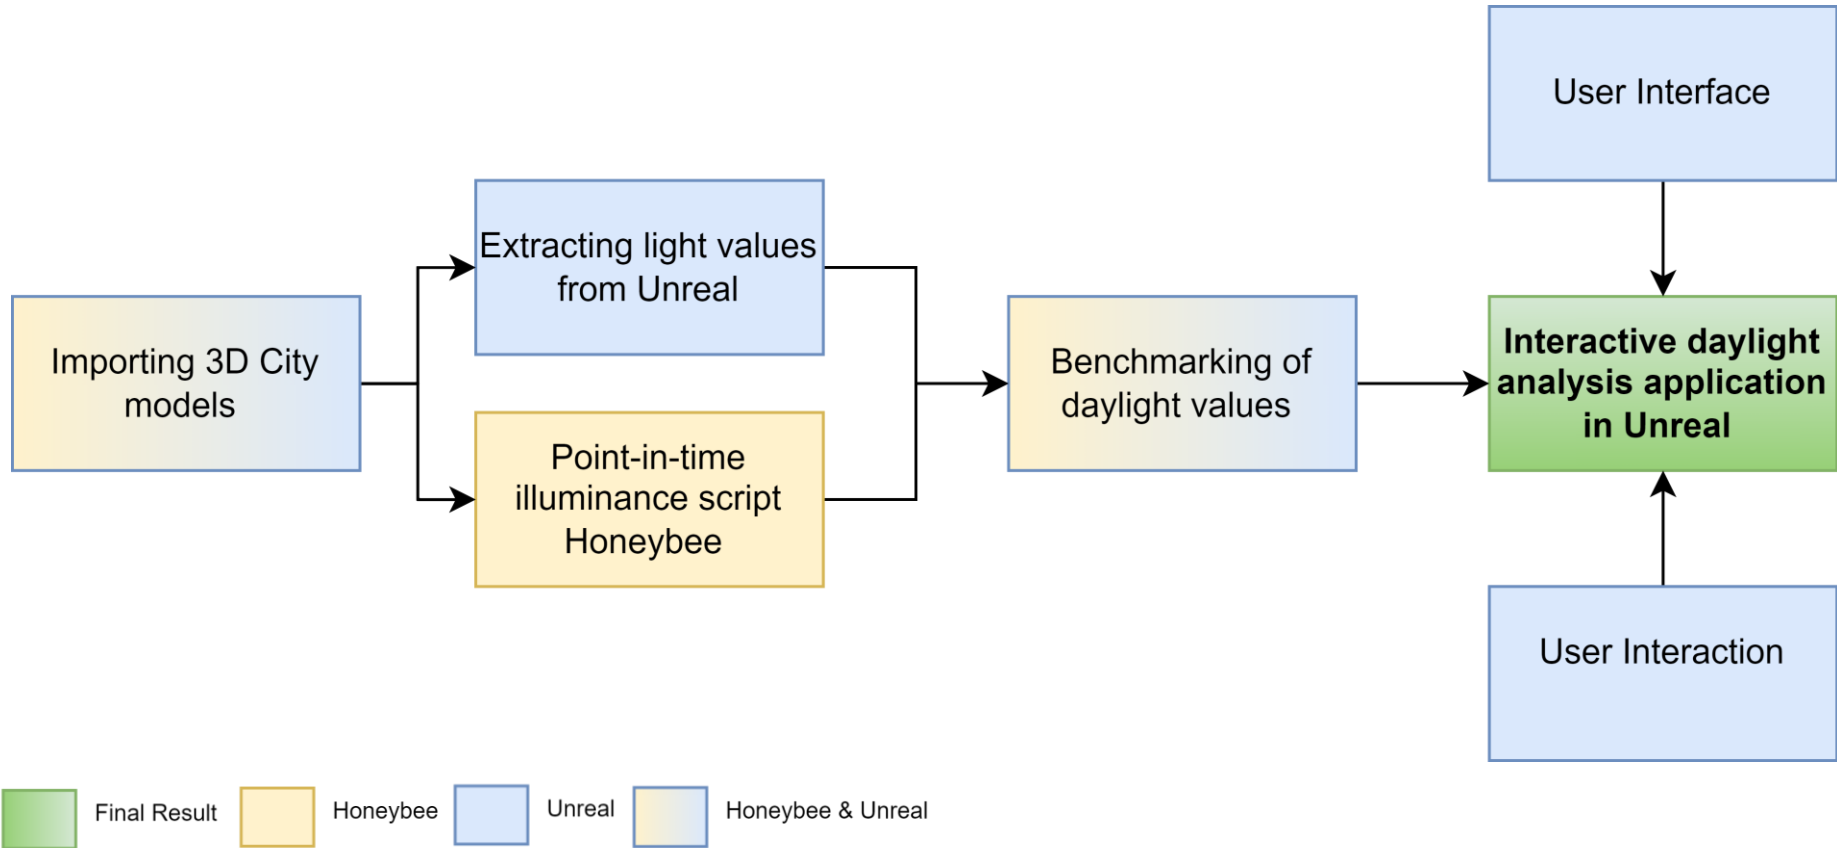

# To what extent is the Unreal engine suitable to scale-up physically accurate daylight simulation tools?

Sub questions:

1. Integration of 3D city models
2. Extracting light values
3. Benchmarking
4. Design Functionality

- 3D City model = 3D digital model of City
- Different models
  - CityGML
  - CityJSON
  - Cesium 3D Tiles
  - Etc.
- Usage in Netherlands
  - 3DBag CityJSON
  - Rotterdam/Hague CityGML
  - Amsterdam Cesium 3D Tiles

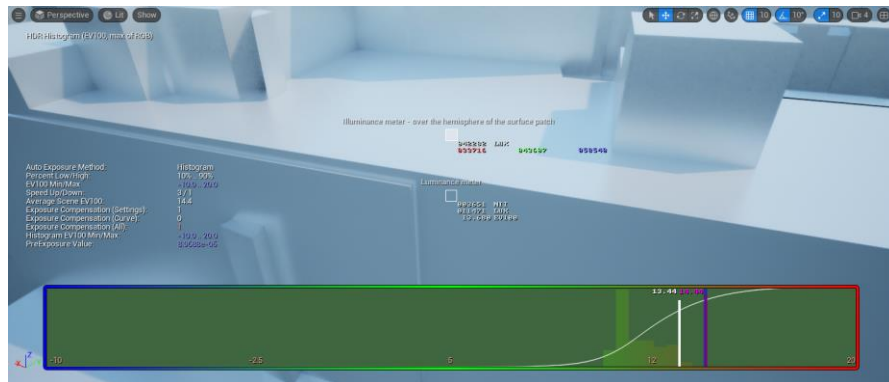

**3D City Model**

- Not directly loadable in Unreal or Honeybee
- Cesium Ion
  - Georeferencing
  - OGC 3D Tiling standard
  - Smooth rendering
- Implementation in research:
  1. Convert CityJSON to Cesium tile using FME
  2. Load CityGML directly into Cesium ion.
  3. Convert CityJSON to CityGML using FME
  4. Convert CityJSON to CityGML using citygml-tools
  5. Cesium OSM Tileset
  6. Google Maps API.

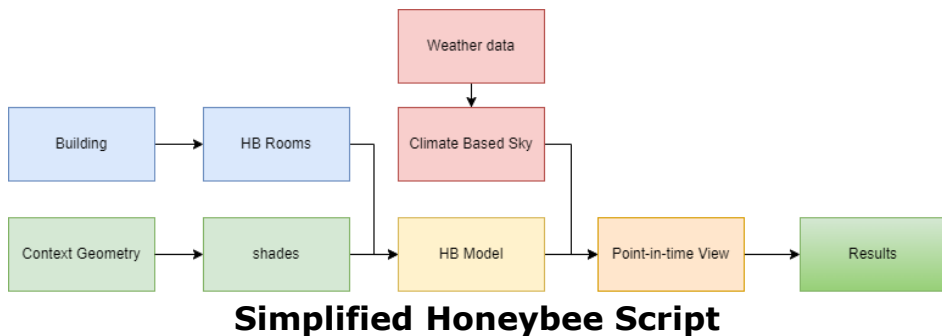

- Unreal
  - Accessing from build in functionality
  - Custom C++ actor
  - HDR eye adaptation tool
  - False Colour Material
- Honeybee
  - Point-in-time Illuminance script

## Measurement in Unreal

## Measurement in Honeybee

**Building blocks**

**Import tilesets**

**Change render**

**Change date & time**

**Rotate, scale,  
translate**

## Building blocks

Scale

**Rotate, scale,  
translate**

 **Functionality – Rotate, scale & translate**

## Import tilesets

Cesium URL

vQoG1RERfWk

Asset ID

1677568

Functionality – import tilesets

## Change render

Functionality – change render

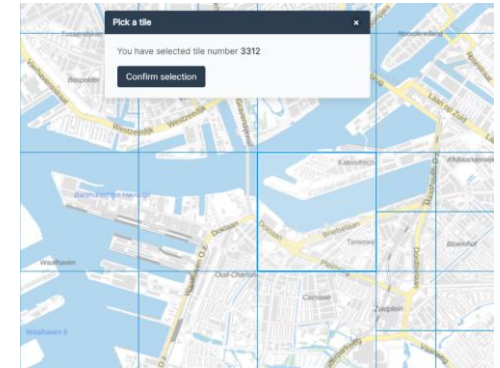

## Change date & time

- Benchmarking 3D City Models Unreal vs. Honeybee Script
- Tile 3312 from 3DBAG.
  - 3010 buildings
  - Rotterdam, the Netherlands
  - area of 1.75 km<sup>2</sup>

## Tileset location

Cesium URL

Asset ID

Hour

Day

Month

Results

- Height issue CityJSON
- Not all Formats of CityGML accepted

- **Accessing build in functionality** - required custom engine build
- **Custom C++ actor** – calculate luminance values at runtime
- **HDR eye adaptation tool** – measure Illuminance and luminance values in development mode
- **False Colour Material** - visually represent Illuminance and Luminance

**False Colour Rendering**

### 3D City Model Benchmark

|                   | Runtime new angle | Runtime Complete script | Runtime adding new geometry | Illuminance values             |
|-------------------|-------------------|-------------------------|-----------------------------|--------------------------------|
| Unreal            | 0.6 msec          | 0.6 msec                | 0.6 msec                    | 9.78% difference with Radiance |
| Radiance Honeybee | 645sec            | 93 min                  | 93 min                      | -                              |

### Distribution of Points

### Box plot

**Outliers in lit Surfaces**

### Values of outliers

| Point | Honeybee | Unreal | Difference(%) |
|-------|----------|--------|---------------|
| 80    | 13691    | 20800  | 51,92         |
| 96    | 14762    | 18744  | 26,97         |
| 110   | 22607    | 31381  | 38,81         |
| 112   | 22607    | 32631  | 44,34         |
| 134   | 22858    | 30779  | 34,65         |
| 135   | 22213    | 30693  | 38,18         |

## Demo

<https://youtu.be/HoYp9HjSBtY>

- **User Functionality:**
  - + Initial massing studies
  - Refined and detailed design
  - + Import designs made in other tools.
  - + Collaborative Design
  - Detailed Daylight analysis

- Improved comparison and extraction methods
  - Exporting data
  - Manual vs. Automatic measurement
- User testing and feedback
- Validation across different scenarios
  - Different times and locations
- Connection to weather data in Unreal
  - Sun & Sky light settings according to data.
  - Sun position alignment
- Extended functionality
  - Daylight analysis
  - Design functionality

- Great potential to use Unreal Engine to scale-up physically accurate daylight simulation tools that is:
  1. **Physically accurate** - average deviation of 9.04% with Radiance
  2. **Efficient** - 0.6ms calculation times
  3. **User-friendly** - speed, accuracy & design functionality
- Proof of concept for an architectural & urban development platform with built-in geospatial analysis.

**The Future of Daylight analysis is  
bright!**
