

Textile spanned roof with possible PV cells on top

Textile finish for aesthetical look

Plastic stadium seats suited for optimal transportation.
Connection requires a special tool, designed against vandalism

GFRP / rigid foam grandstand elements covered with a CoeX anti slip mat for vibration damping and UV-protection

Vacant space between the sloped grandstand elements for ventilation shafts and drainage pipes. Connected with technical facilities and septic tanks.

Rollable textile façade, hanged onto steel joints. The façade makes use of an evaporative cooling technique to cool in hot climates

Floor panels form a rigid plane, assembled together with U-profiles at the end. Some panels have room for ventilation, sprinkler installations and LED lighting (Stormbroek, 2008).
