

DESIGNING A DATA ENABLED PRODUCT TO SUPPORT DAILY COOKING PRACTICES.

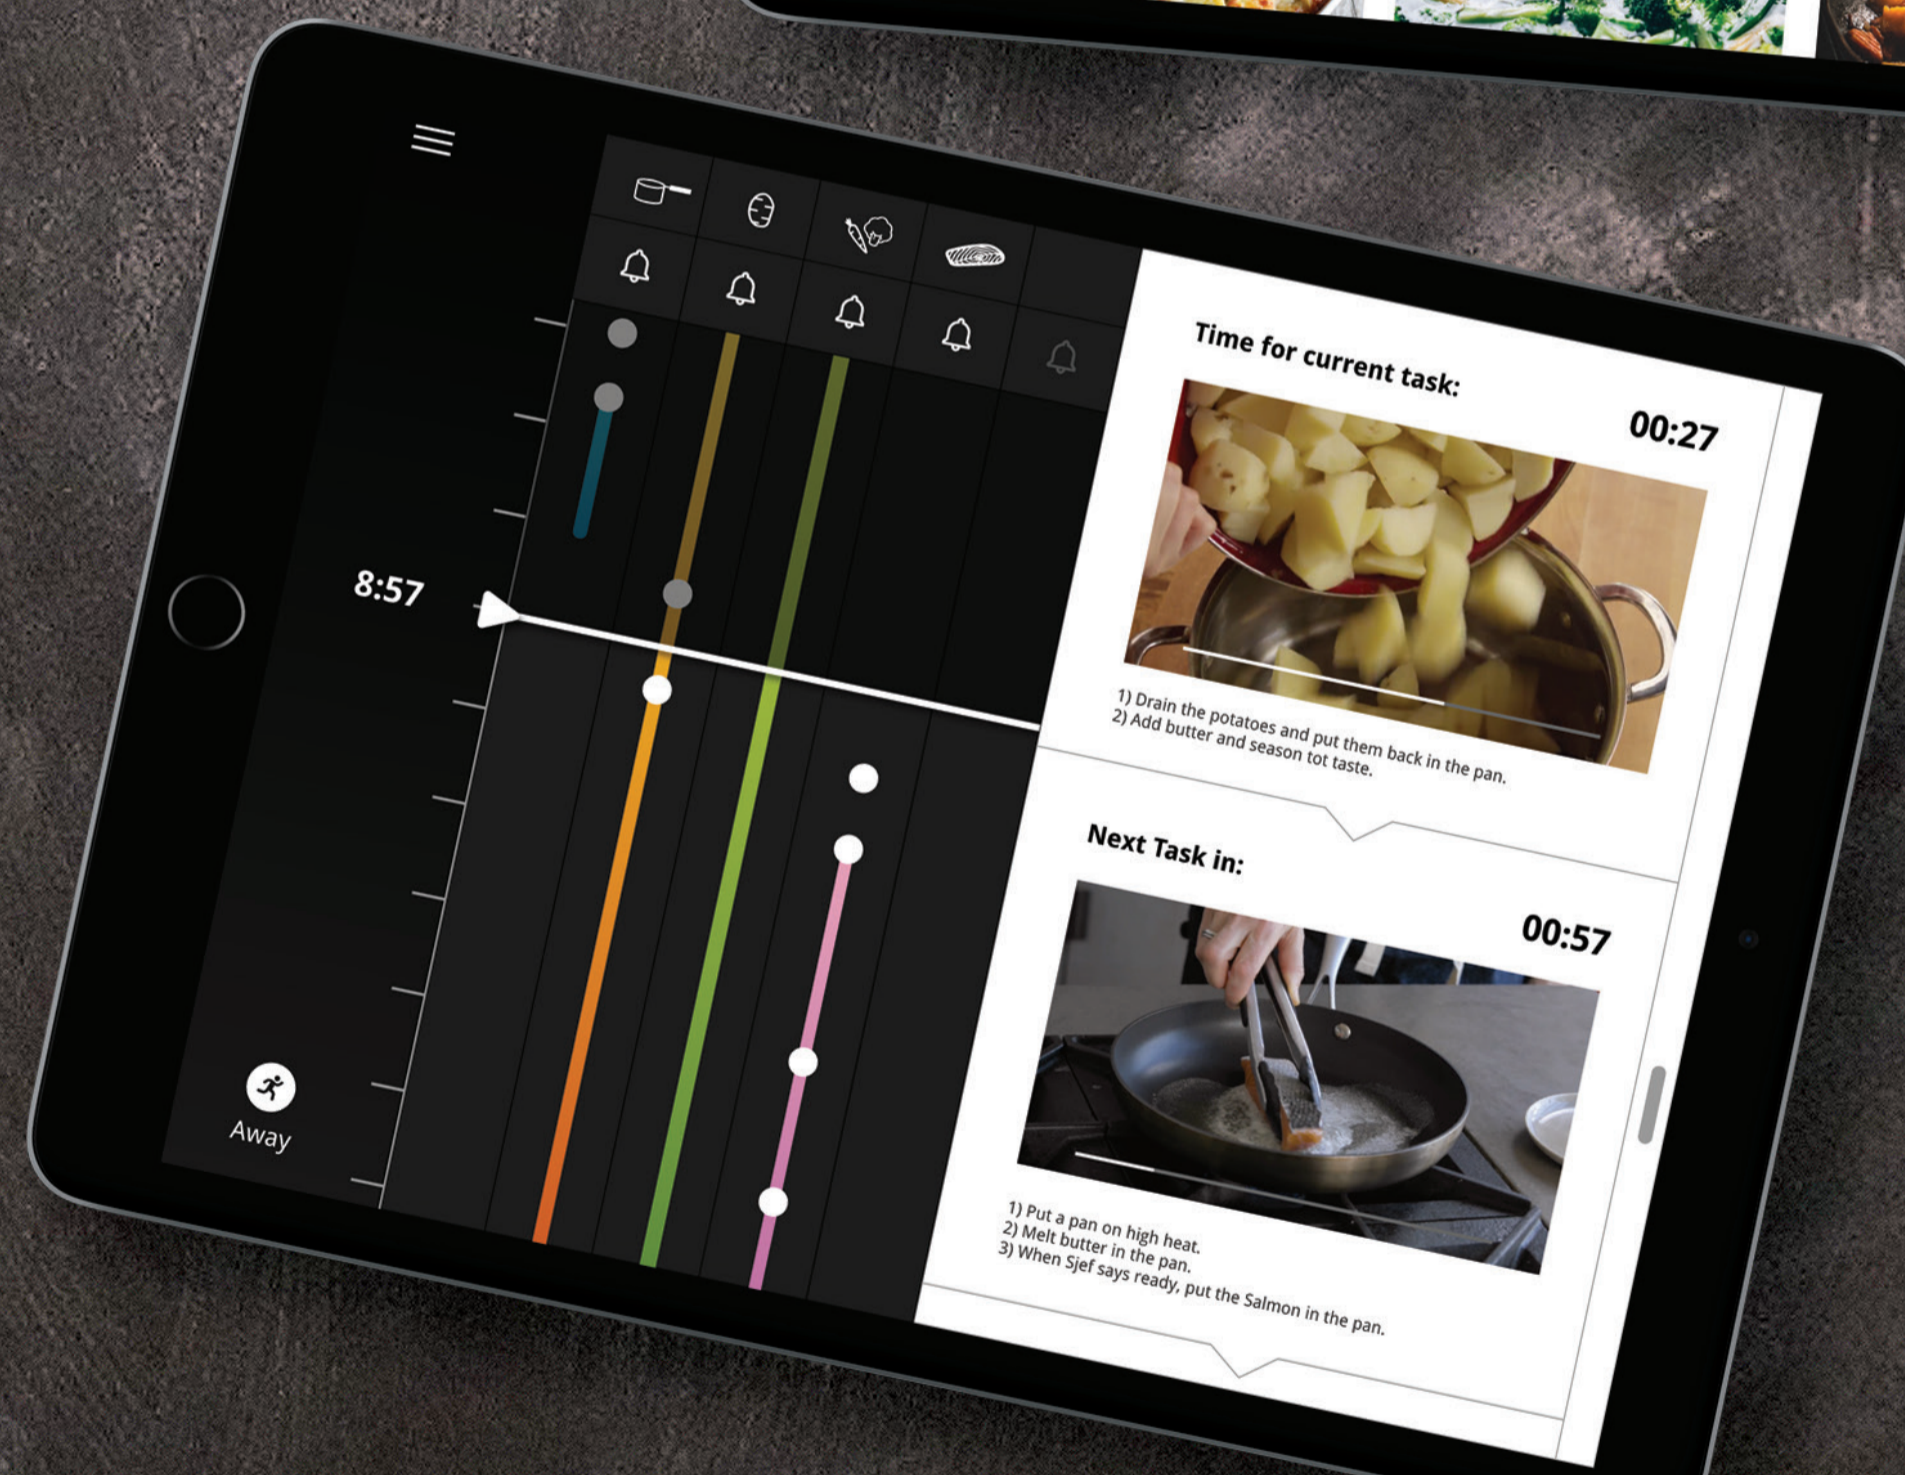

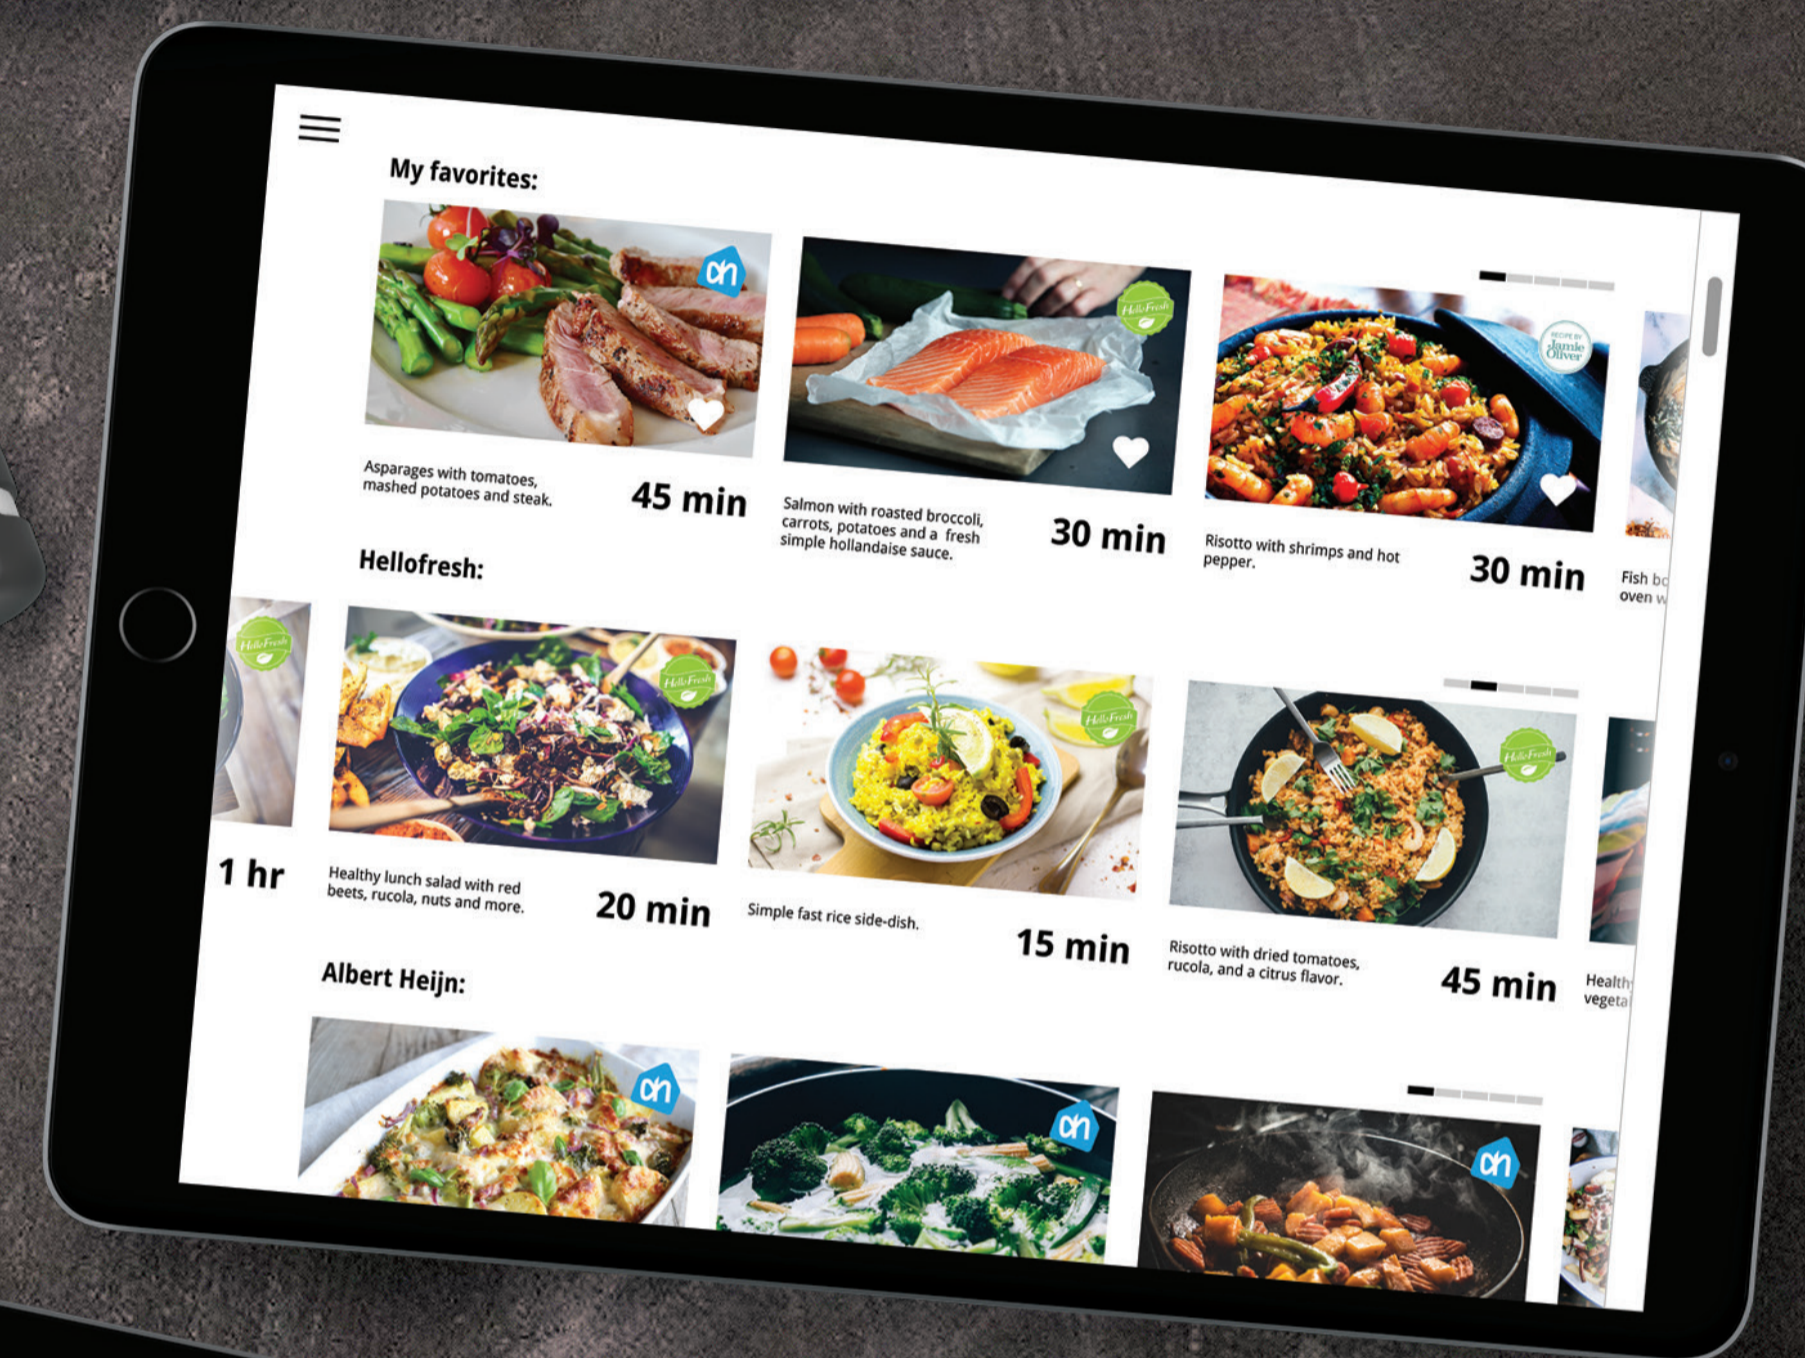

Sjef is a product that works on any stove top and in combination with its app is able to assist any home cook in their kitchen. During cooking Sjef guides the user through their cooking and senses whether or not they completed the recipes' steps. If it cannot sense this, Sjef will ask whether they are done or not. If not completed, Sjef simply adjust the current planning if necessary.

Sjef gives all the advice it can give to help you cook the recipe the best way by assisting you, looking after your timing and cooking process, and advising in temperature settings. So when you are distracted during cooking, Sjef will allow you to be focused on what is really important, sharing a culinary experience with the ones you love.
