Automobile Manufacturing

# INDUSTRIAL HUB

Guanajuato

Migration Trends from Other States

Central Corridor Guanajuato  
5 Major Cities

# POPULATION INCREASE

**GUANAJUATO** has modified its geomorphological landscape, transforming it through **URBANIZATION, INDUSTRIALIZATION & AGRICULTURE**.

This has caused **INCREASE IN POPULATION**, that in combination with the lack of urban planning have lowered the **QUALITY OF LIFE** in urban areas and have resulted in **SOIL EROSION, WATER SCARCITY, DEFORESTATION & SPECIES EXTINCTION**.

## PROBLEM STATEMENT

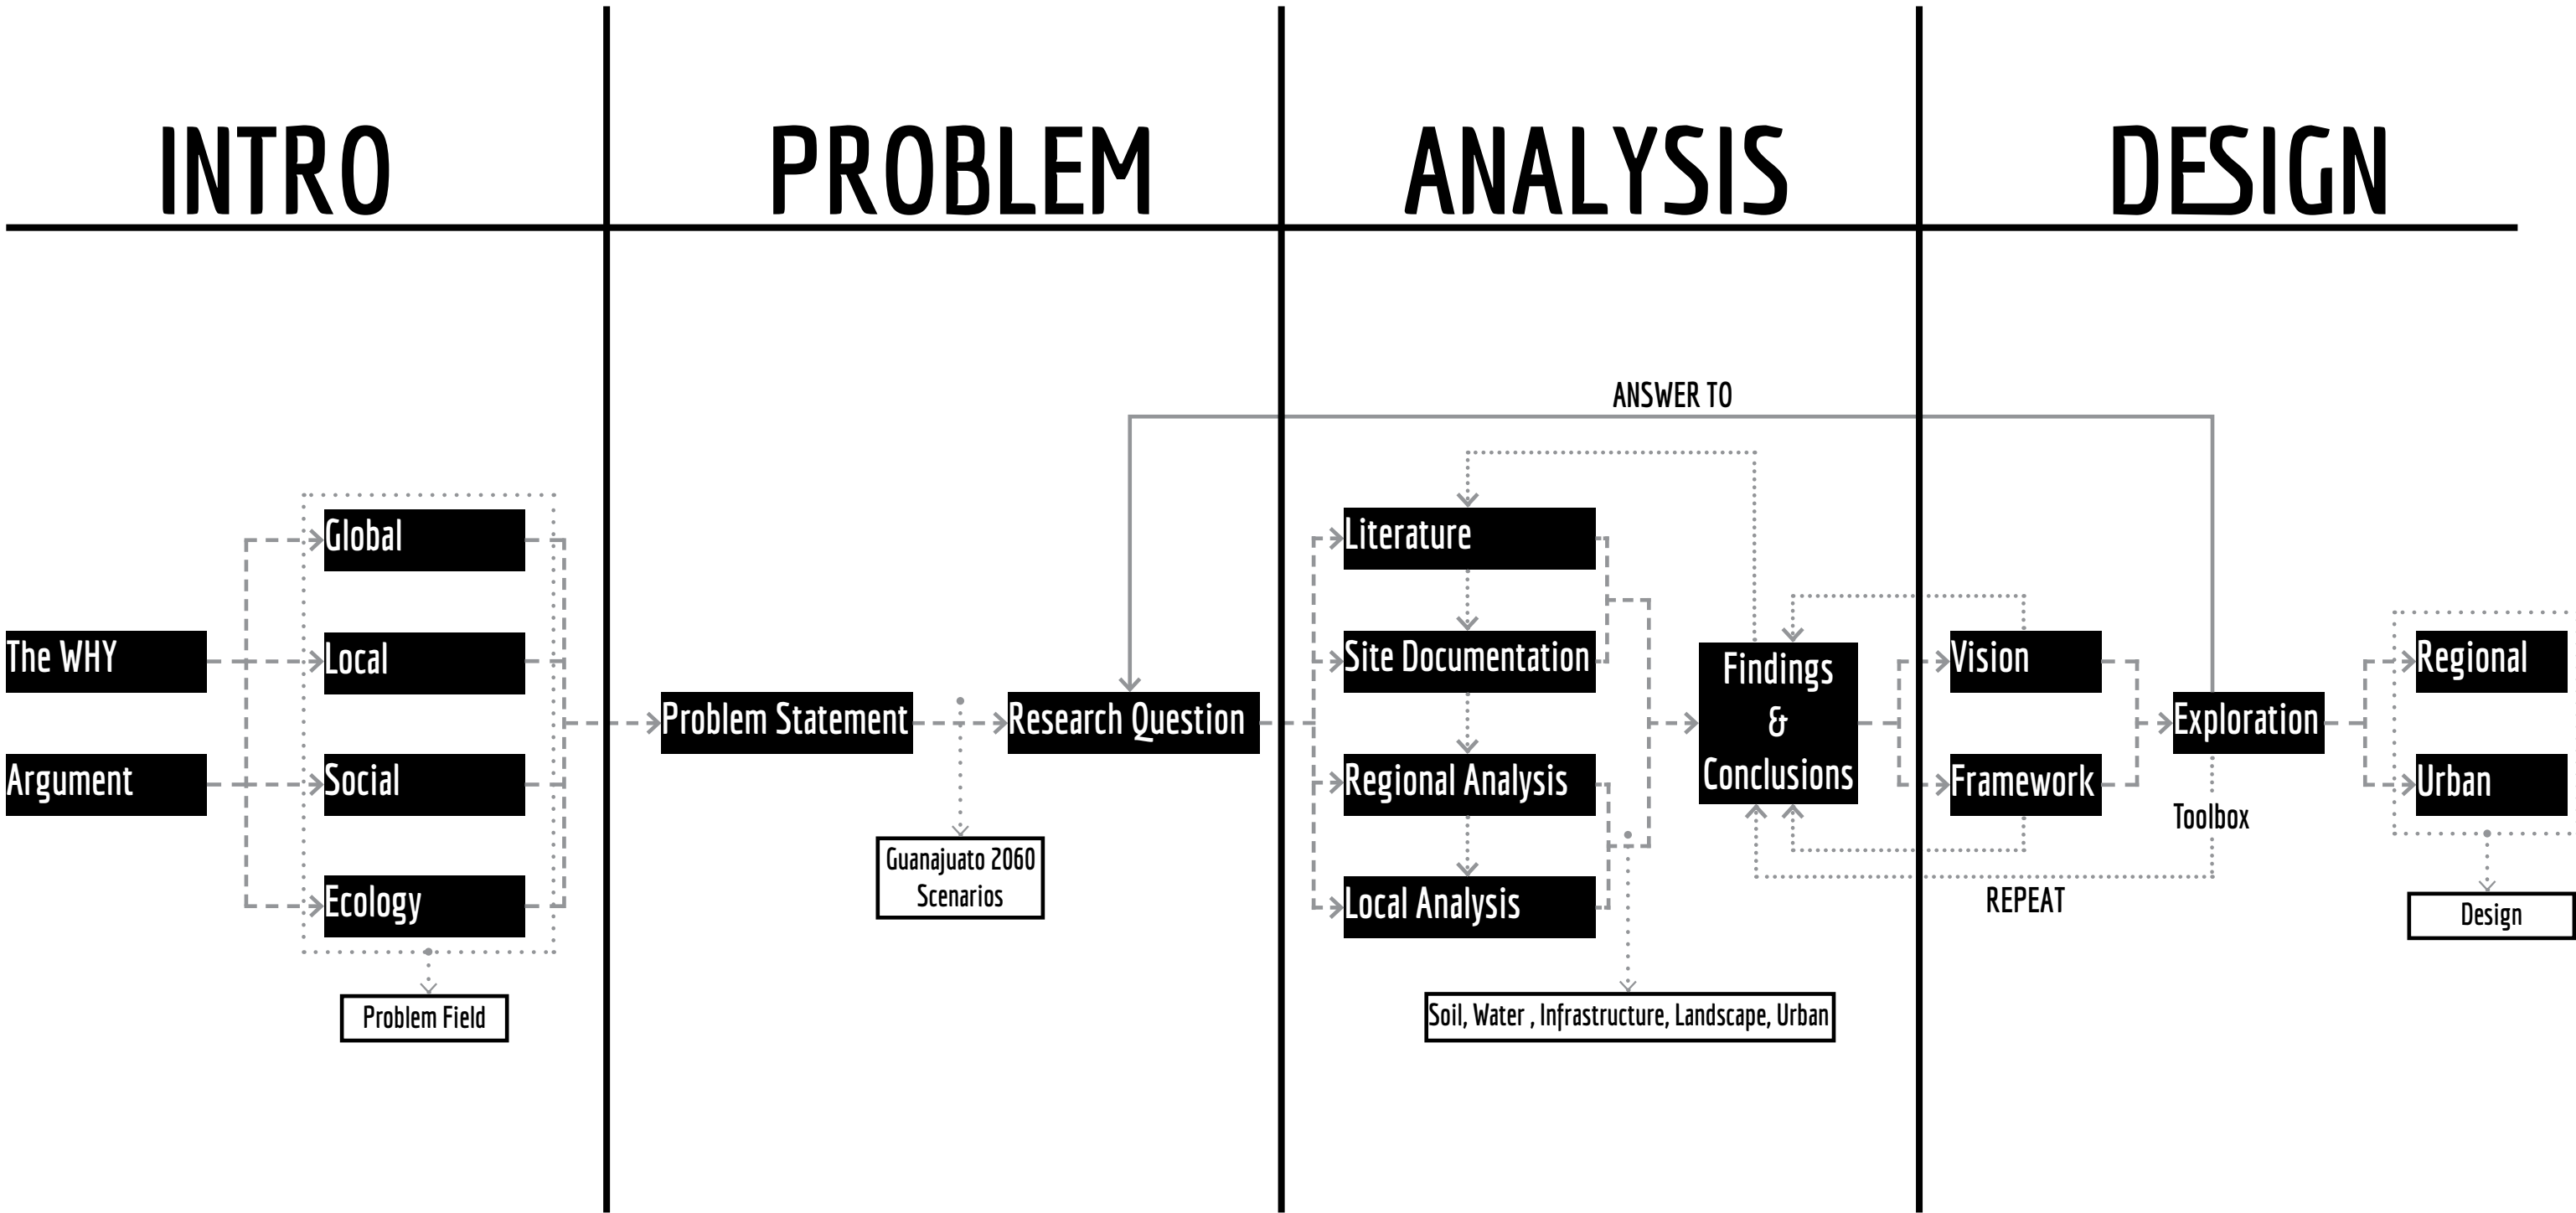

What is an urban and ecological **REGENERATION STRATEGY** to **RESTORE** social and environmental issues caused by **ANTHROPOGENIC PRACTICES** in order to transition into a **BIODIVERSE** and **SUSTAINABLE** urban landscape?

River - Agroforestry - Water Retention - Agriculture

DESIGN

URBAN

LANDSCAPE

REGIONAL STRATEGY

## SOIL

- Agricultural zonification
- Introducing agroforestry
- Need Of Biodiverse Landscape
- **Increase Carbon Fixation**
- **Increase In Soil Quality**
- Self Sustaining Landscape
- Native Balanced Ecosystem

## WATER

- **Retention**
- **Filter**
- **Infiltration**
- Reincorporate Into The System.
- Flood Areas as Oportunity Retention Areas

## INFRASTRUCTURE LANDSCAPE

- **Sustainable Mobility Methods**
- Ecological Integration
- Enhance Biodiversity
- Connected Landscapes for Species
- **Biological Corridors**

- **Enhancement of Forests, Scrublands and Grasslands**
- Development of Biological Corridors
- Wild Life Connectors
- **Biodiversity**
- **Restablish Native Ecosystems**

## URBAN

- **Compact Cities**
- **Sustainable Cities**
- Variety of Mobility Options
- Quality Public Spaces
- Quality Dwelings
- **Healthy Cities**
- Increase in Program
- Biodiverse Cities
- **Spatial Justice**

# DESIGN AIMS

## Ecocities

- Proximity
- Water Strategies
- Community Participation
- Restoring Biodiversity

## The Human Dimension

- Compact Cities
- Lively Cities
- Safe Cities
- Sustainable Cities
- Healthy Cities

# DESIGN PRINCIPLES

Irapuato

Salamanca

2. Landscape Intervention

1. Urban Intervention

Pueblo Nuevo

AREA OF FOCUS/DESIGN

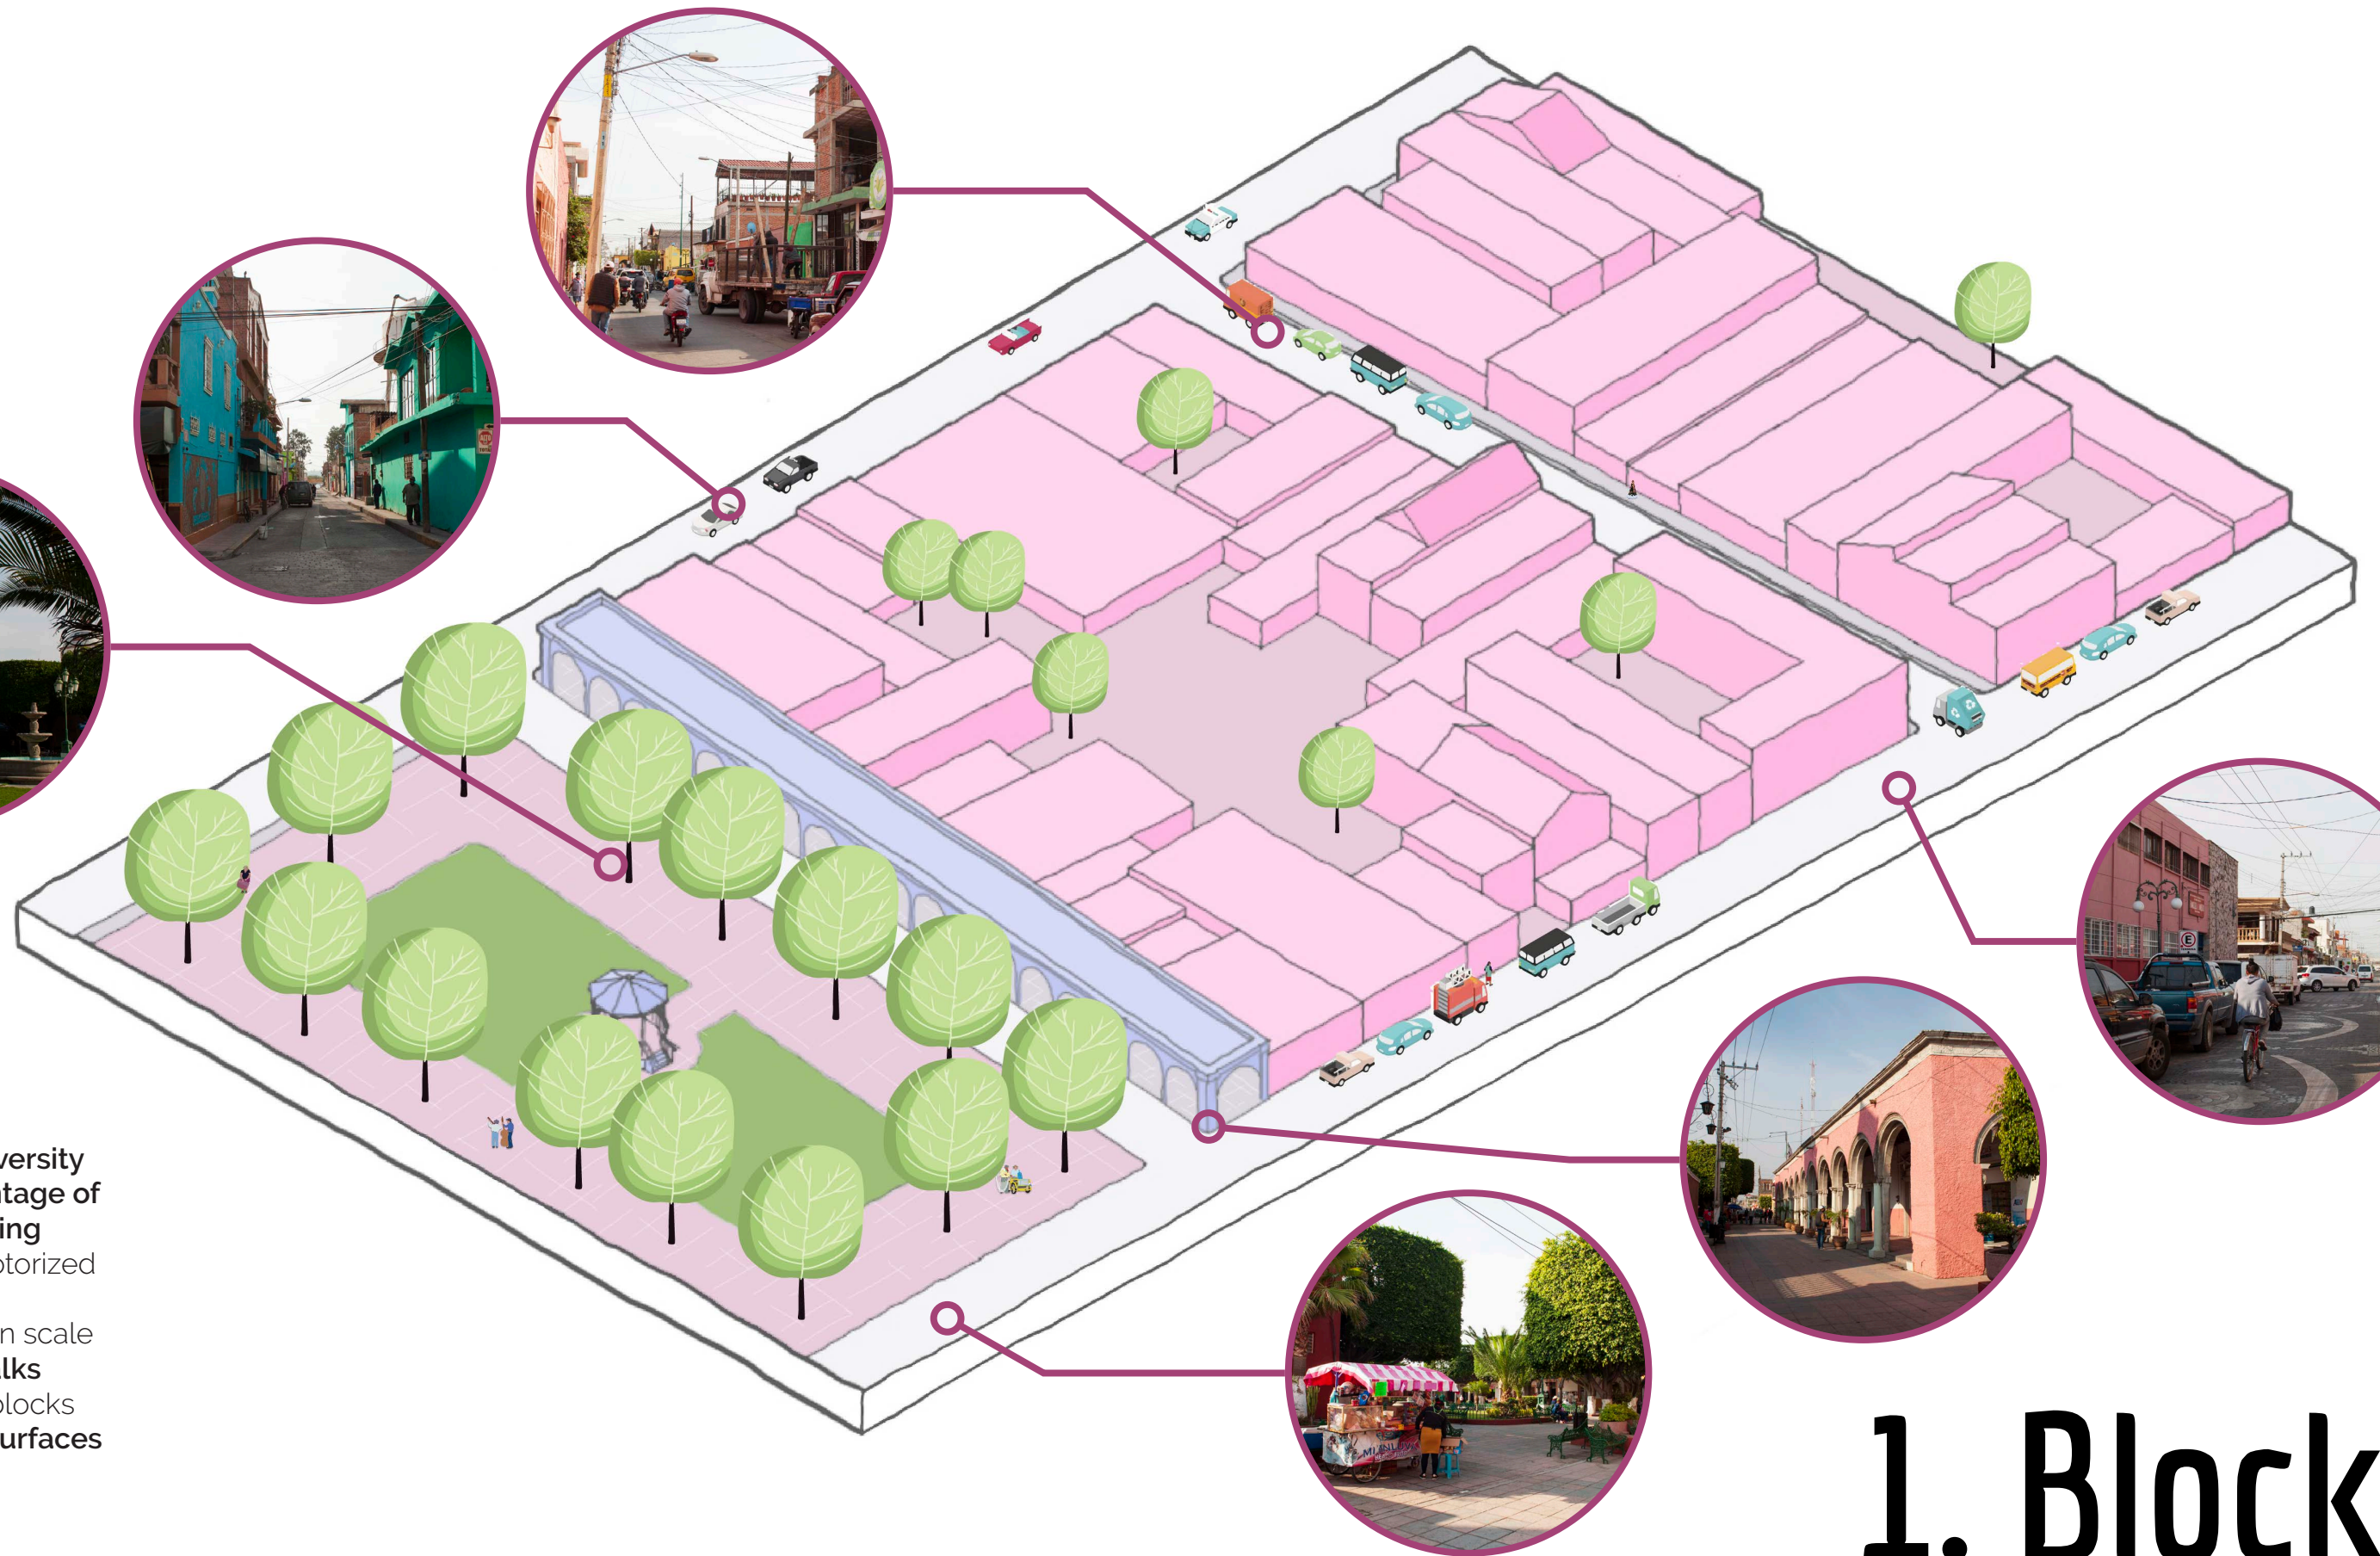

# URBAN

CURRENT - PUEBLO NUEVO

1. Lack of biodiversity
2. Large percentage of streets for parking
3. Streets for motorized vehicles
4. Lack of human scale
5. Small sidewalks
6. Low density blocks
7. Non porous surfaces

# 1. Block

## 2. City Edge

- 1. Eroded agricultural soil
- 2. Paved streets with no greenery
- 3. Lack of trees variety
- 4. Polluted water
- 5. Lack of human & animal interaction

SUSTAINABLE ECOCITIES

BIODIVERSITY

MOBILITY

INFILTRATION

PERMEABILITY

WHAT IS TACKLED?

- Mixed Use
- Housing
- Education
- Health
- Leisure
- Markets
- Parking
- Parks

# URBAN DESIGN

# Strategy

- Utilize low quality areas for urban expansion with a max of 2km2
- Increase of 50% on population

# How?

# WHY?

- Take advantage of low quality spaces
- Make Space for population increase
- Clear edge between city and nature
- Lack of greenery & biodiversity

# CITY EXPANSION STRATEGY

## Strategy

- Compact 5 minute city
- Vertical Densification
- Increase of public spaces
- Pedestrian accessibility

## WHY?

- Lack of space for pedestrians
- Accessibility
- Low density town
- Population absorption
- Lack of green public spaces

## How?

## Current

## Proposed

# 5 MINUTE NEIGHBORHOODS

# Strategy

- Increase public spaces
- Provide gathering and community centers
- Quadrant strategy with nature nodes
- Permeability and water retention

# WHY?

- Lack of space for pedestrians
- Excess of non porous surfaces
- Lack of green public spaces
- Lack of water infiltration

# How?

# Current

# Proposed

INCREASE OF PUBLIC SPACES

# Strategy

- Restricted car use
- Pedestrianism
- Improvement of streets for people and biodiversity
- Parking lots in periphery

# How?

# Current

# Proposed

# WHY?

- Lack of space for pedestrians
- Car parking on streets account for a 40% of the street
- Lack of biodiversity on the streets
- Lack of connectivity
- Pollution created by vehicles
- Excess of non porous streets

# REDUCE MOTORIZED STREETS

# Strategy

- Pedestrianism
- Soft mobility streets
- Straight connectivity corridors to central nodes

## WHY?

- Lack of space for pedestrians
- Lack of biodiversity on the streets
- Lack of connectivity
- Excess of non porous streets
- Low quality sidewalks

## How?

## Current

## Proposed

# INCREASE SOFT MOBILITY

# Strategy

## How?

- Increase of mixed use
- Increase of commercial and office space
- Quadrants as independent economic hubs

### WHY?

- Mixed use and commercial spaces are located only along one part of the city

Current

Proposed

# INCREASE OF MIXED USE

Existing

Example area of city

Current

Proposed

VISION FOR QUADRANT

# Strategy

- Increase of pedestrian streets
- Implementation of soft mobility streets
- Redistribution of street section

## WHY?

- Streets are in its majority for motorized vehicles
- Excess of non porous surfaces
- Small and interrupted sidewalks

## How?

Current

Proposed

# INCREASE OF MOBILITY VARIETY

## Strategy

- Increase of mixed use
- Increase of commercial and office space
- Quadrants as independent economic hubs

## WHY?

- Mixed use and commercial spaces are located only along one part of the city
- Lack of services

## How?

## Current

## Proposed

# INCREASE OF FUNCTIONS

# Strategy

- Increase public spaces
- Depave existing green public spaces
- Incorporate squares for continuous green corridors
- Green belt as a boundary for expansion control

## WHY?

- Lack of public spaces
- Lack of greenery
- Low interaction with nature
- Excess non porous surfaces

## How?

Current

Proposed

# INCREASE GREEN PUBLIC SPACES

## Strategy

- Increase of mixed use
- Increase of commercial and office space
- Quadrants as independent economic hubs

## WHY?

- Mixed use and commercial spaces are located only along one part of the city

## How?

Current

Proposed

# MODIFICATION OF COURTYARDS

## Strategy

- Vertical densification
- Population absorption
- Zoning for priority areas

## WHY?

- Low density buildings
- Poor quality of open spaces
- Lack of zoning

## How?

Current

Proposed

# DENSIFICATION ZONING STRATEGY

# BLOCK VISION - AREA OF FOCUS

Enhanced Public Space   Vertical Densification   Community Courtyard   Enhanced Streetscape   Soft Mobility Streets

# CONCLUSION

What is an urban and ecological **REGENERATION STRATEGY** to **RESTORE** social and environmental issues caused by **ANTHROPOGENIC PRACTICES** in order to transition into a **BIODIVERSE** and **SUSTAINABLE** urban landscape?

108

**MAIN RESEARCH QUESTION**

- **HEALTHY PEOPLE**
- **LIVELY BIODIVERSITY**
- **COMMUNITIES - ACTIVE - SAFE**
- **RETURN OF HUMAN SCALE**
- **ECONOMIC GROWTH**
- **HIGHER QUALITY OF LIVING**

# URBAN CONCLUSIONS

- QUANTITY AND QUALITY OF WATER
- REGAIN LOST VEGETATION
- REINCORPORATION OF SPECIES
- RICH SOIL QUALITY
- REESTABLISHED ECOSYSTEM & NATURAL CYCLES
- HIGH QUALITY PRODUCE
- HEALTHY ENVIRONMENT

# LANDSCAPE CONCLUSIONS

- BIODIVERSE URBAN LANDSCAPE
- BALANCE WITH NATURE
- NETWORK OF ECOCITIES
- HIGHER LIVING STANDARDS

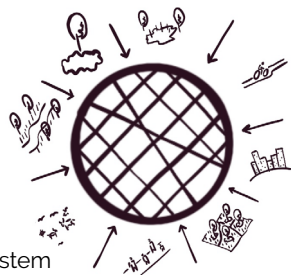

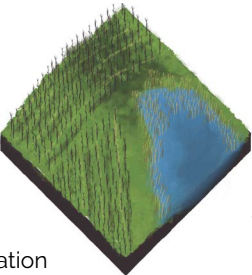

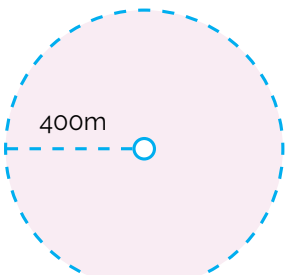

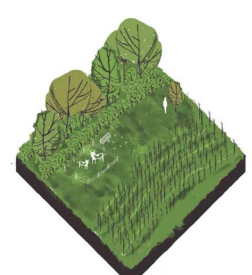

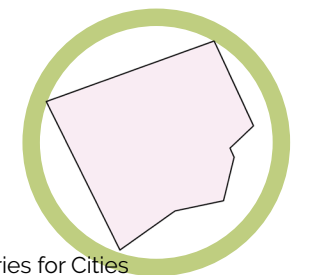

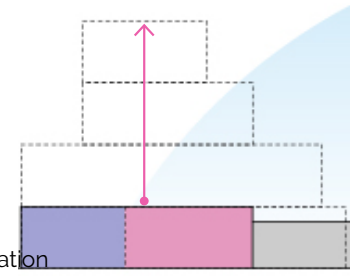

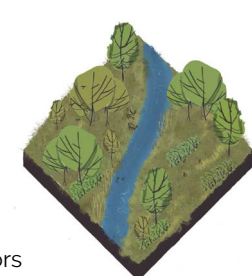

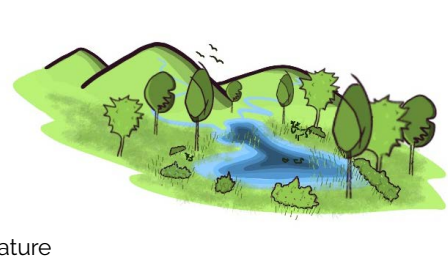

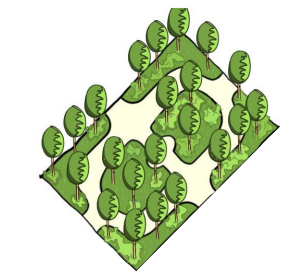

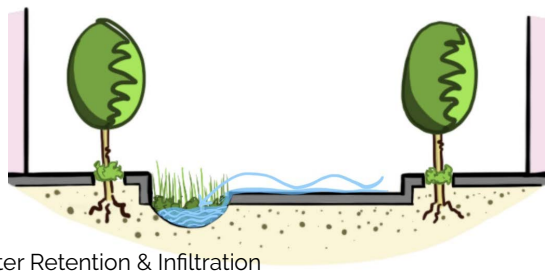

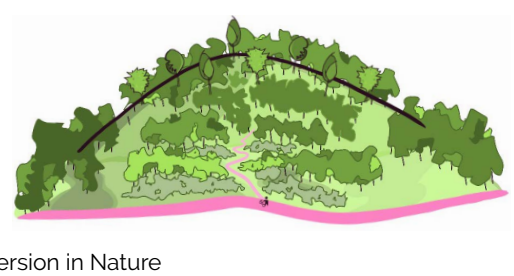

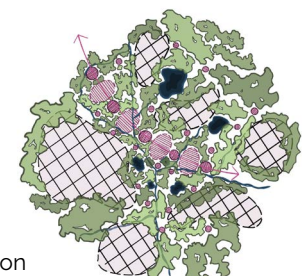

# REGION CONCLUSIONS

		ANNIHILATION	UNHEALTHY	REMEDIATION	RESTORATION	HEALTHY	BALANCE	SYMBIOSIS
URBAN	COMPACT CITY	Urban Sprawl - Constant Expansion			Contained cities			Compact cities
	MOBILITY	Unsustainable, Individual, Lack of Variety			Sustainable Transport - Increase of soft mobility			Sustainable mass transport - Soft mobility as the main option for mobility
	LIVING	Segregation, Lack of services, Low Quality			Integration, Some services, Good quality			Unified city, All services, Premium quality
	LANDSCAPE	Lack of greenery & Biodiversity			Incorporation of greenery			City as a living ecosystem
LANDSCAPE	REFORESTATION	Increase in Deforestation			Reforestation			Vast forests
	BIO CORRIDORS	Elimination of biological corridors			Continuation of biological corridors			Free mobility for all species
	GRADIENTS	Monoculture			Varied species			Diverse and balanced landscape
	BIODIVERSITY	Annihilation of species			Reappearance of native species			Strong biodiversity
INFRASTRUCTURE	MOBILITY OPTIONS	No options in mobility			Options in mobility			Sustainable and varied mobility
	CONNECTIONS	Increase in human and animal disconnections			Increase in human and animal connections			Network of integrated connections
	ECO INTEGRATION	Elimination of ecology			Restoration			Integrated ecological infrastructure
WATER	QUALITY	Low quality - Polluted			Higher quality - Somewhat clean			Best quality - Clean
	QUANTITY	Scarce			Availability			Vast
	FLOOD AREAS	Problematic			Opportunity			Wetlands & Ponds
	REINCORPORATION	Polluted or inexistent			Reincorporation strategies			Natural filtration - reincorporation system
SOIL	CARBON FIXATION	No fixation			Mid fixation			High fixation
	SOIL QUALITY	Infertile , Eroded, Compacted			Restoration strategy			Best quality
	LAND USE	Monocultures, Uneven			Variety of land uses			Highly diverse land use
