

DESIGNING A PROMISING WAY TOWARDS

Better (colorectal) cancer care

IN DIJKLANDER ZIEKENHUIS

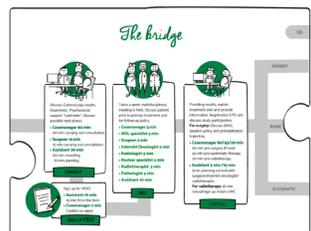

ORGANISATIONAL LEVEL

On organisational level, the care pathway is used to calculate the amount of nurse specialists needed to execute case management. The implementation of case management is documented in an implementation manual.

CAREGIVERS LEVEL

The new care pathway is a conceptual design which makes the future vision of 'better (colorectal) cancer care' more tangible. Expertise is retained and the overall process is monitored by designing a new module within the care pathway: the bridge.

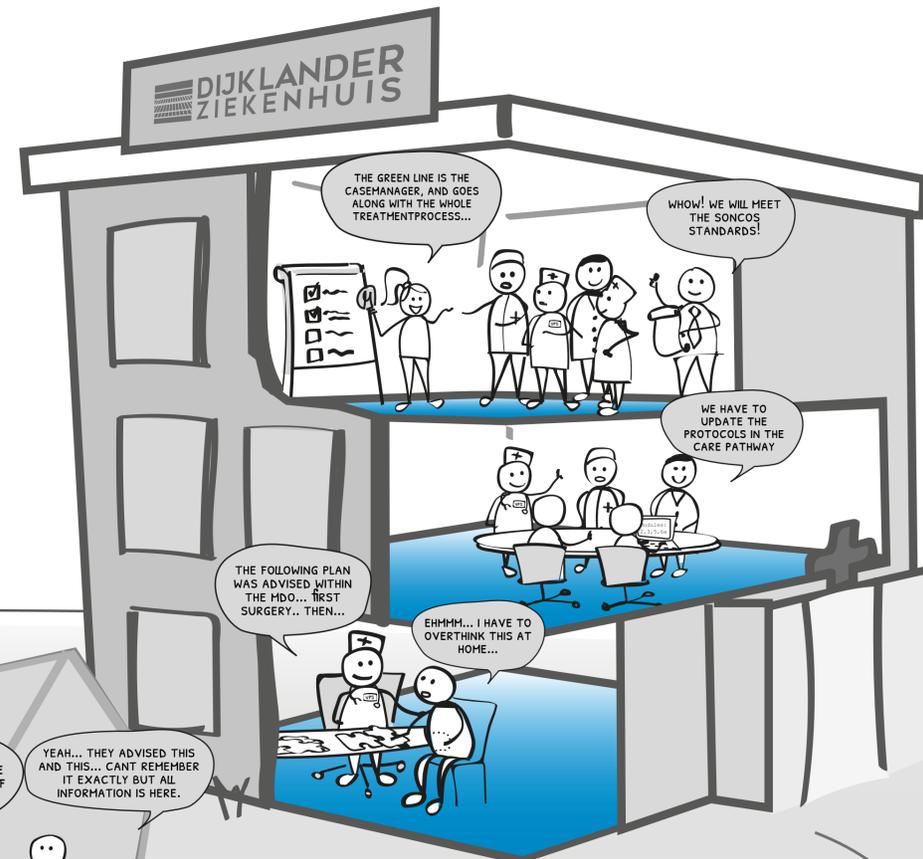

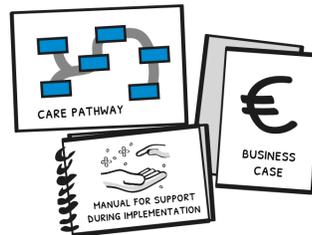

PATIENT LEVEL

The modular format meets the wishes to deliver bespoke and patient-centred care. In addition, the care pathway makes better communication towards patients possible. This is essential for shared decision making.

DELIVERABLES

Three deliverables are developed to describe the future vision 'Better (colorectal) cancer care in Dijklander ziekenhuis' and the implementation of it 'the promising way'.
