

A Sustainability Roadmap for DERA KO

The road to a circular future

Derako is a Dutch company specialized in designing and manufacturing suspended ceilings, wall panels and façade panels. Their production can be considered wasteful, mainly generating wood waste and plastic waste.

Through thorough research and internal co-creation sessions with Derako employees, a roadmap has been created. In this roadmap, the path towards a circular product line for Derako has been set out.

This circular product line, together with a return shipping method, will reduce the amount of waste created. Through a method of collection and redistribution, the value of the materials can be kept high for many years to come.
