A photograph of a building under renovation. A glass-enclosed walkway with a curved roof structure runs across the upper part of the frame. In the background, a multi-story building is visible, with some windows appearing broken or missing. To the right, a green demolition crane with the text 'Beelen sloopwerken' is partially visible. The foreground shows some debris and overgrown vegetation. The overall scene is in a state of active demolition or renovation.

MINING

The image shows a demolition site under a hazy, orange-tinted sky. In the background, a large building features a prominent 'amc' logo. A large pile of rubble and debris is the central focus, with an excavator positioned on top of it. In the foreground, a white van with the 'Beelen' logo is parked near a fenced-off area. The overall scene conveys a sense of urban decay and the process of material recovery.

*“To see urban areas, such as **cities and buildings**, as potential **material mines**, focussing on the **recovery** of these materials from the **urban catabolism**”*

Embodied Energy

*“Embodied energy is the **energy consumed** by **all** of the **processes** associated with the **production** of building.”*

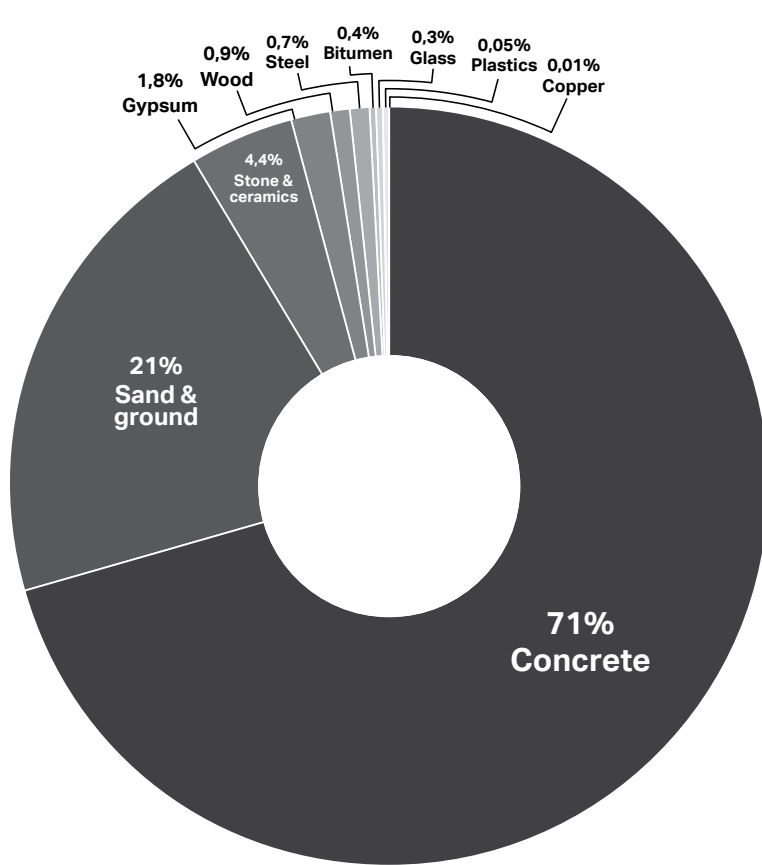

Embodied energy and carbon

Component	Amount (tons)	Embodied energy (MJ)	Embodied carbon (kgCO₂)	Life expectancy (years)
Concrete walls	3147	4.311.390	557.019	100+
Concrete floors				
Concrete columns				
Concrete beams				
Brick facade	195	585.000	42.900	100+
Wood panel siding	2	19.000	1.020	20-50
Aluminum windowframes	0,5	77.500	4.120	20-50
Double pane glass	14	210.000	11.900	20-50
Bitumen roofing	16	752.000	7.680	30
EPS insulation	1,4	124.040	3.500	100+
Glasswool insulation	2	56.000	2.700	100+

Embodied energy and carbon

Component	Amount (tons)	Embodied energy (MJ)	Embodied carbon (kgCO ₂)	Life expectancy (years)
Concrete walls				100+
Concrete floors	3147	4.311.390	557.019	
Concrete columns				
Concrete beams				
Brick facade	195	585.000	42.900	100+
Wood panel siding	2	19.000	1.020	20-50
Aluminum windowframes	0,5	77.500	4.120	20-50
Double pane glass	14	210.000	11.900	20-50
Bitumen roofing	16	752.000	7.680	30
EPS insulation	1,4	124.040	3.500	100+
Glasswool insulation	2	56.000	2.700	100+

Material amounts vs embodied energy

Conclusions

- 1) Concrete and brick - high quantity, high impact
- 2) Aluminum and insulation - low quantity, high impact
- 3) Glass and bitumen - medium quantity, high impact
- 4) Wood - no significant impact

Conclusions

recycle and reuse 1:1 ←

Bitumen roofing
PIR insulation

Wood panel siding

→ refurbish and recycle

prolong

Brick facade
Glasswool insulation

Aluminum windowframes
Double pane glass

→ prolong or reuse 1:1
