Addis Ababa

The valley and river

Negative Space

Social Spaces Pattern

Income Generation Pattern

The commercial roads as a border

Using the existing connections to articulate the HSR and the river

The intervention contributing to revitalizing the river

Bridges connect both sides of the river

Creating a scenic footpath along the river

Preserving the social spaces gradient

Accessible river and vegetable gardens

The Meeting Place

The In Between Space

The first blocks are built on empty ground, to start the phase of relocating inhabitants of the existing sefer.

To introduce the public main axis, public functions are implemented such as a public square and a market structure, where vendors but also the owners of the existing vegetable garden can generate income.

The cluster blocks along the main axis are built together in construction phases, connecting the neighbouring informal settlements to the new plan and also providing them with the connection from the HSR to the river. At the same time the revitalization of the river is occuring.

The cluster blocks bordering to the informal settlements are now completed, finishing the last phase of the masterplan.
