

Meaningful urban neighbourhoods, measurable **social** impact

Ruba Ammiwala | 5080932

Delft University of Technology | Architecture, Urbanism and Building
Sciences | Management in the Built Environment

Under supervision of: Gerard van Bortel & Roberto Rocco

Delegate from the Board of Examiners: Benjamin Groothuijse

IMAGINE YOUR NEIGHBOURHOOD

Think of your own neighbourhood,
what is the first thing that comes to mind?

NEIGHBOURHOOD CHARACTERISTICS

Neighbourhoods are not just physical places

People, routines, everyday encounters

NEIGHBOURHOOD CHARACTERISTICS

Shirazi & Keivani (2018); indicator – social networking and interaction

BUT WHAT IF CHANGE HAPPENS?

What is the effect on you and on future generations?

New buildings appear

Houses are demolished

Social structure can change

How do developers in the Netherlands interpret and integrate social sustainability in neighbourhood development, and how does this align with ESRS S3 reporting requirements on affected communities?

Main research question

DEVELOPERS

AFFECTED COMMUNITY

Strategies

Experiences

TWO CASE STUDIES

Positive change socially, developers' involvement, affected community

Katendrecht – Rotterdam

Improving area image

Dreven, Gaarden, Zichten – Den Haag

Improving living conditions

KATENDRECHT

Historical context

Harbour district, migrant communities, unsafe area

Social network & cohesion

Strong community identity [Kapenezen], village-like social networks

Developer involvement

Heijmans since 2006

Policy context

Focus on heritage led renewal, image improvement, expensive housing, making the area safer

Type of intervention

Gradual transformation and densification around edges

Affected community

Residents mostly remained, no houses demolished, redevelopment around existing community

Socio-spatial context

Emerging mixed income urban district

Placemaking with local entrepreneurs

Fenix Food Factory

Mixed housing segments

De Groene Kaap

Active campaigns, boosting area

Nacht van de Kaap

LOCAL REPRESENTATIVES

- **Social cohesion** between old and new residents
- **Information asymmetry and mistrust** due to late participation
- **Identity and belonging** felt lost
- **Everyday places and informal encounters** matter, community feels divided
- **Community groups** and initiatives hold more knowledge and information than thought
- **Acknowledging affected communities** and negative effects is the first step

KATENDRECHT

DEVELOPERS

Strategies

Improved area image
Liveability score positive

AFFECTED COMMUNITY

Experiences

Mistrust
Feeling of lost identity

DREVEN, GAARDEN, ZICHTEN

Historical context

Stamp like architecture, post-war housing

Socio-economic challenges

'Achterstandswijk'; unemployment, poverty, education

Developer involvement

Heijmans since 2019

Policy context

Focus on participation, housing renewal and inclusion

Type of intervention

Phased demolition and renewal of housing stock

Affected community

Residents directly affected, temporary housing and phasing required

Socio-spatial context

Post-war architecture and neighbourhood with structural socio-economic disadvantage

Partnership & co-governance

Municipality, Staedion & Heijmans

Area renewal

Green spaces,
more than only
housing

Right to return policy

Community programming

Local businesses involved

DEVELOPERS
Strategies

AFFECTED
COMMUNITY
Experiences

LOCAL REPRESENTATIVES

- **Cultural life-world** aspects determine experiences
- **Displacement effects** come with emotional and social consequences
- **Informal community figures need to be protected** because they are essential for creating awareness and understanding of the redevelopment plan
- **Structural coordination** is felt by residents and thus marked even more important than thought
- **Monitoring wellbeing** should be long-term and reported

DREVEN, GAARDEN, ZICHTEN

MAIN TAKEAWAYS

- ✓ **Strategies** are oriented on positive effects
- ✓ Developers are **aware** of the people
- ✓ But the **social dynamics** are not always understood
- ✓ Developers focus mostly on **spatial interventions**
- ✓ **Experiences** of the affected community are often **more emotional**
- ✓ **Capturing** the social effects remain difficult
- ✓ **Strategizing** around social effects even more difficult

WHAT IS THE BARRIER?

Alignment and misalignment of social strategies vs. the local impact

DEVELOPERS

AFFECTED COMMUNITY

Strategies

Experiences

SYSTEM WORLD

LIFEWORLD

Reporting on impact

Language barrier

Local context

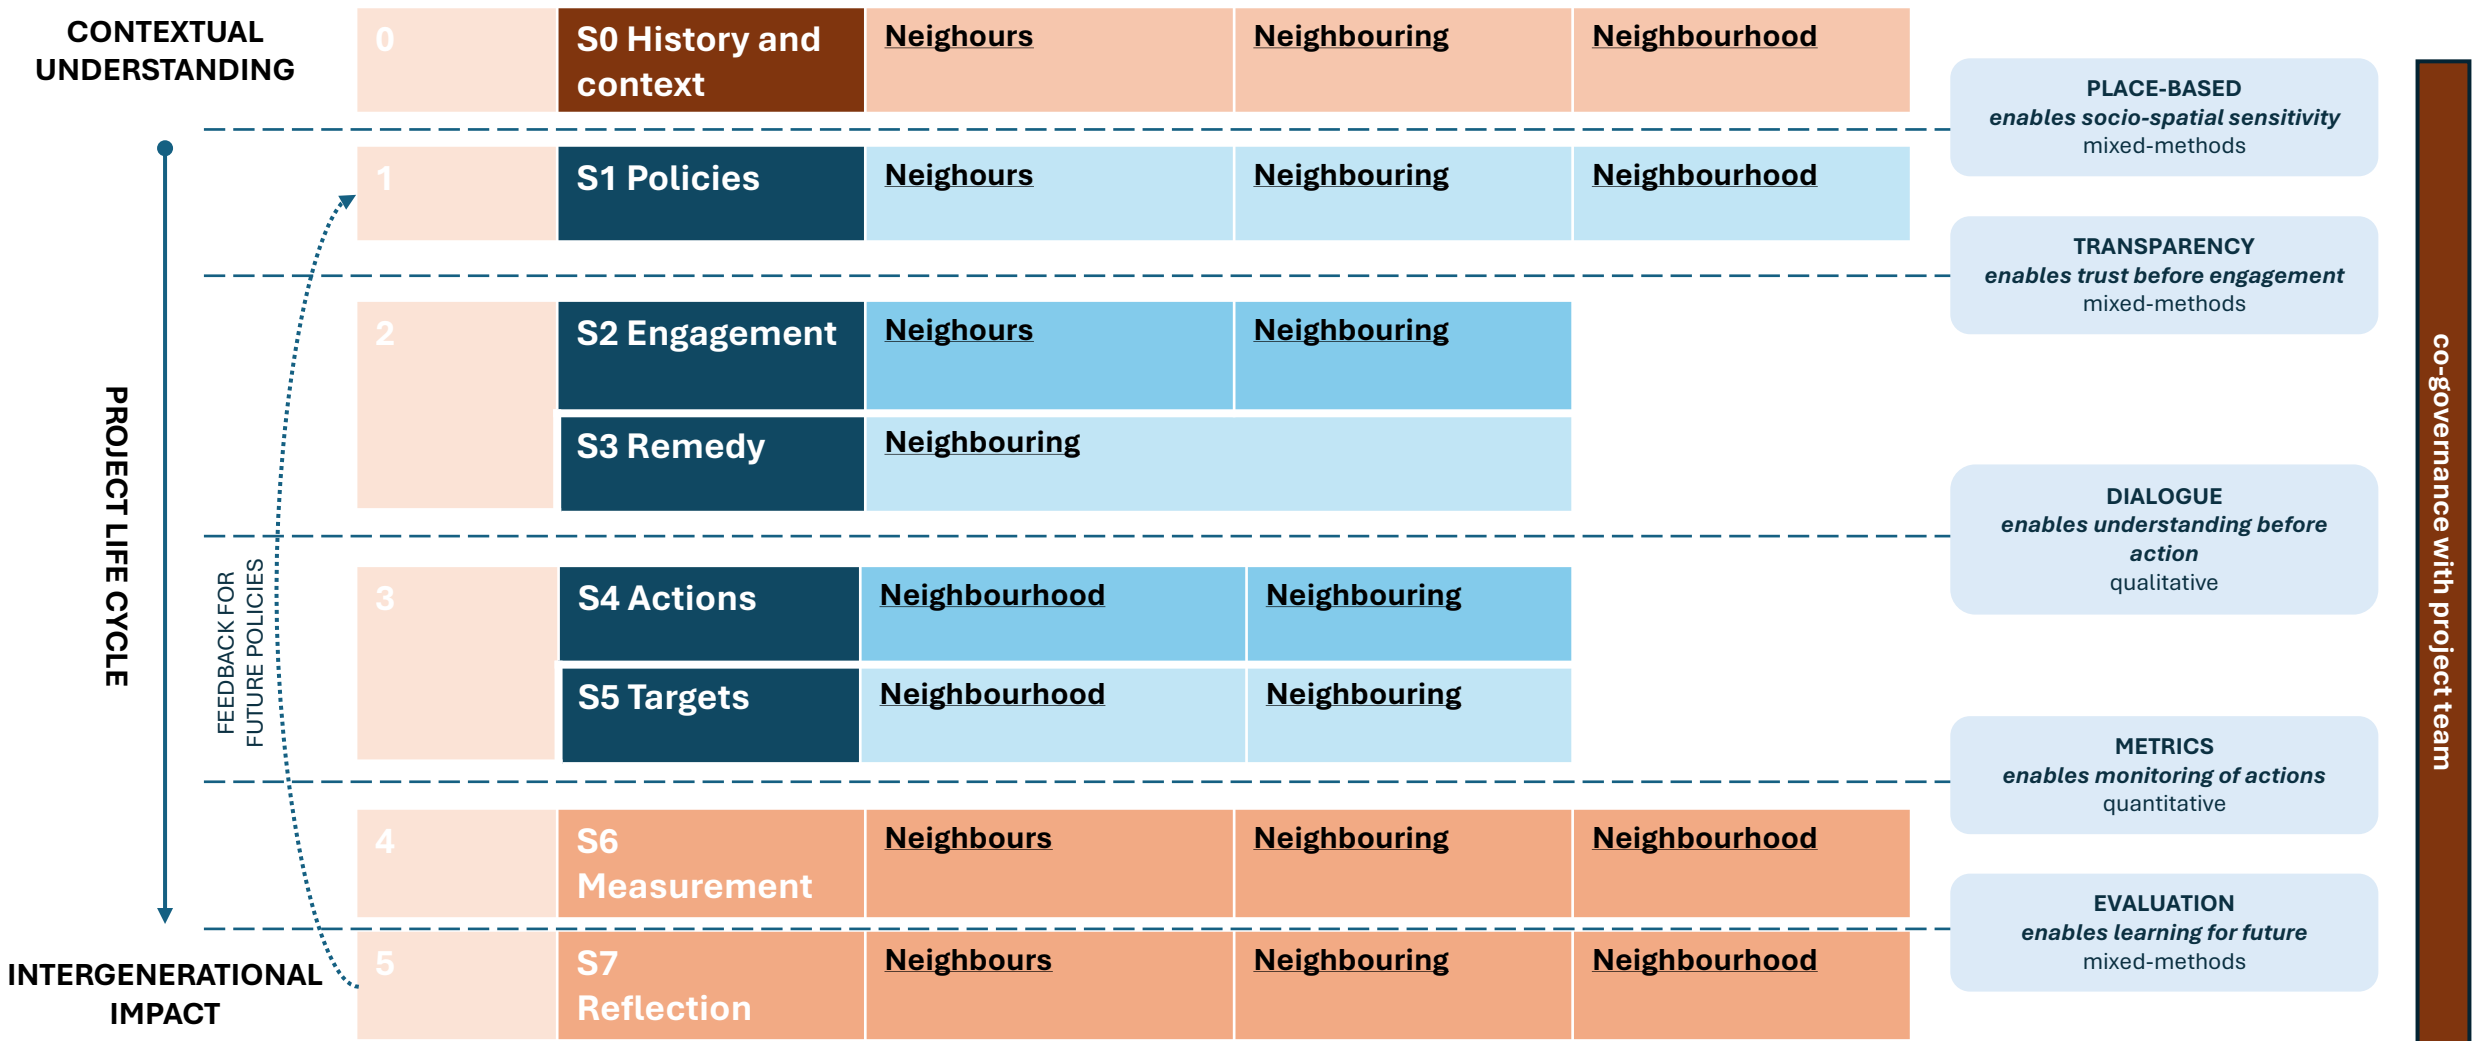

*Developers, investors,
policymakers*

*People from the
neighbourhood*

ANALYSIS OF BOTH CASES

- ✓ **Different stakeholders:** developers, housing associations, municipalities, local representatives
- ✓ **Reporting requirement translated into a tool:** better understanding on the local impact
- ✓ **Aim:** tool for developers
- ✓ **Awareness** of both positive and negative effects

The adapted framework translates structural logic into context-sensitive principles that reflect neighbourhood realities.

How we can use the findings

WHAT I FOUND

Conclusion

Developers acknowledge social sustainability

but strategies remain system-oriented

Lived experiences include; identity, cultural practices, everyday routines

and are underrepresented in formal strategies

Both cases confirm the gap between the system- and the lifeworld

where the same topics exist but are expressed, prioritized and experienced differently

An adapted framework which

results in a more operational, context-sensitive tool for developers

WHAT THIS MEANS

Discussion

Organizational systems are not yet designed for the social dynamics

The adapted framework is a project-level tool which helps understand the social dynamics

Context is decisive for what social sustainability means

SO history & context

Engagement should be relational instead of procedural

Meaningful participation occurs through trust, everyday presence, safe spaces and continuity not through a participation checklist

Social sustainability outcomes require long-term co-governance

Partnership between the municipality, developers, investors and the community and shared responsibility is essential

WHY THIS MATTERS

Reflection

Reshaping how affected communities are approached

and the translation into reports

Deliberate consideration of social structures and lived experiences

not an after thought

Reflective checkpoint

instead of a checklist

Context-sensitive dialogue is needed

a place-based approach

DISCUSSION & QUESTIONS
