Introduction | Environment | Transformation | Materialization

Almere could grow from to 350,000 inhabitants. What will the increase in scale mean for the city and the region?

The Growth of Almere Population

Almere 2.0

- imagination about Almere in 2030

“The Almere Principles form the departure point for an ecological, socially and economically sustainable leap in scale.

There is a good reason why we want to make this leap in scale. There is a fundamental coherent vision on, among others, people, nature, the surroundings, the existing city and the past, present and future. This vision indicates how people and nature relate to each other, the opportunities and possibilities the city must offer, how people could lead pleasant lives here and how we want to deal with the existing city. There is also a vision that forms the basis of the Schaalsprong Almere – one that you can rely on at any time, one with the power repeatedly to give direction to actions. The starting point for the increase in scale is that the current suburban Almere should expand into an **ecologically**, **socially** and **economically** sustainable city. This aspiration is described in the Almere Principles... ”

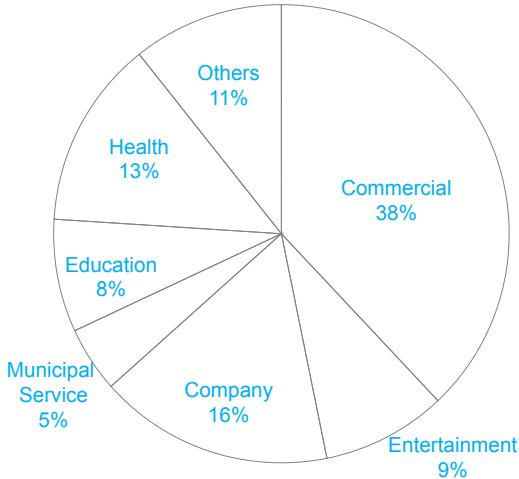

----- Summary, Draft Structural Vision Almere 2.0

MASTER PALN OF ALMERE PAMPUS

Basic Information of Residents

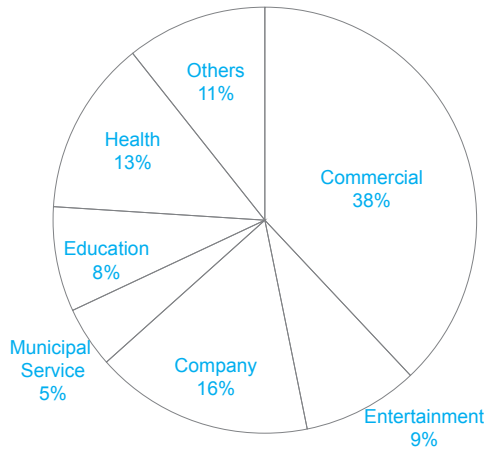

- information of locals
- information of commuters

REGIONAL POPULATION

POPULATION ACCORDING TO AGES

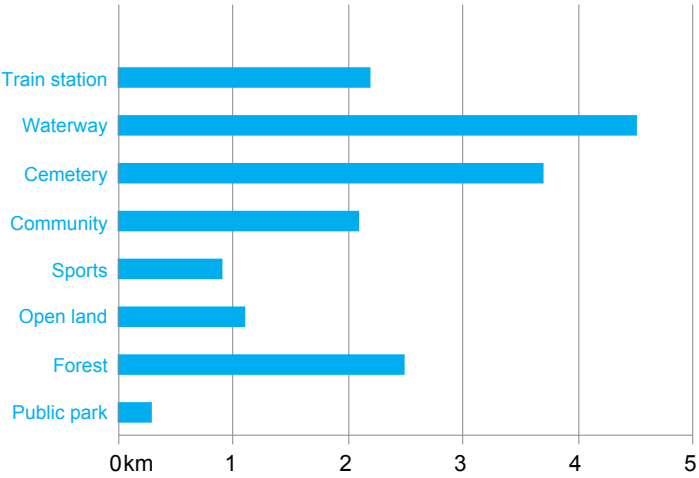

JOB DOMAINS

Profiles:

60,000 inhabitants
12,000 jobs
5,000 train travellers
3,000 train & car commuters per 24 hr.

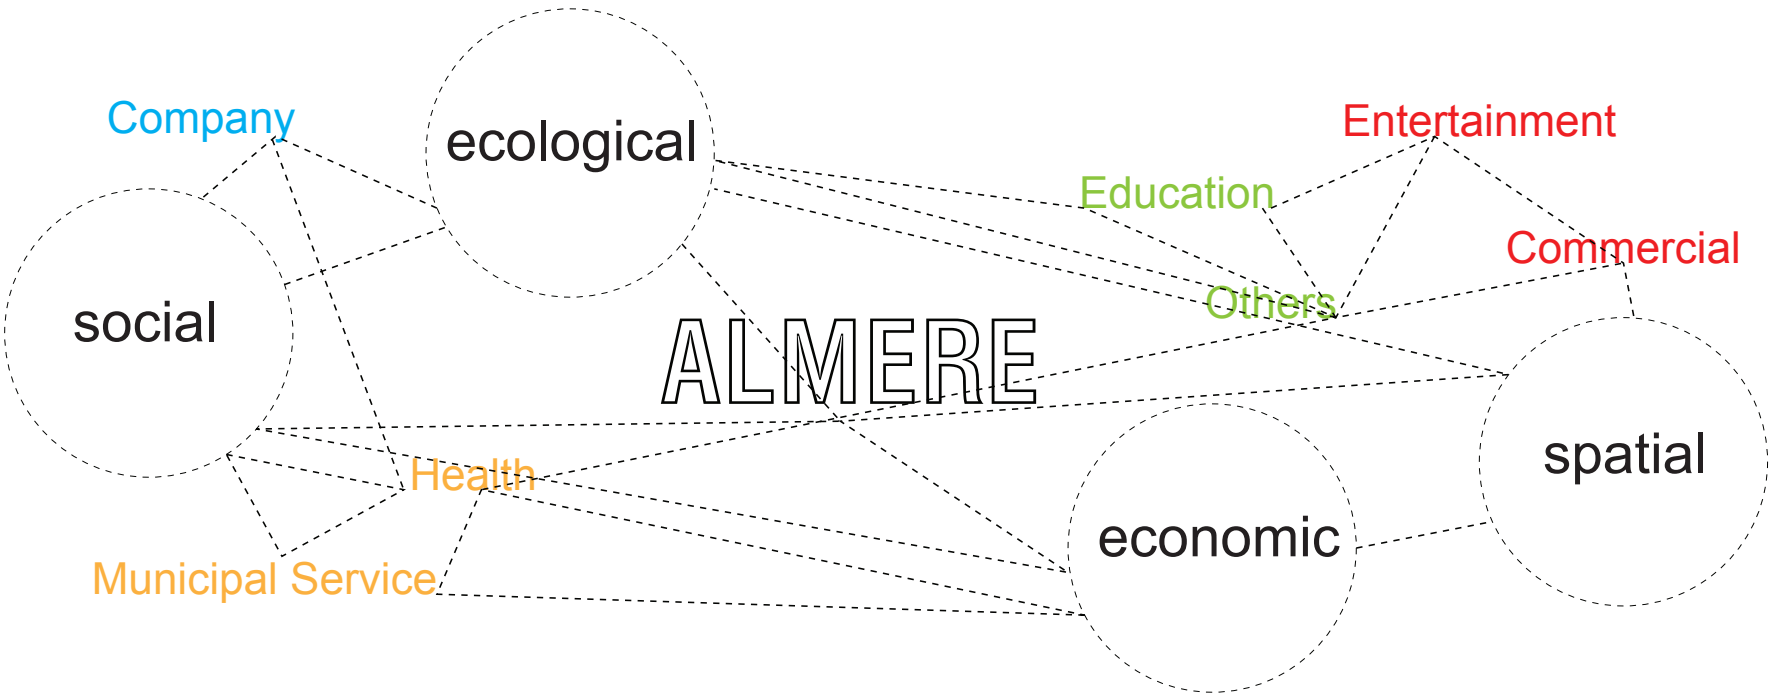

Residential area per person 45 m²
Gross residential area 2,700,000 m²
Built area 1,143,800 m²
Green area 740380 m²

AVERAGE ACCESSIBILITY

Design Strategy

- 1) To investigate Transferium as urban tissue that affects everyday's life of residents.
- 2) From different domains to aspects regarding social, ecological, economic activities, to find the relations between them.
- 3) According to the main job occupation, I build the categories of urban activities, including **commerical**, **green space**, **service** and **office**.

Simulation System

- based on the population data of Almere

TOTAL POPULATION > JOB OCCUPATION > AVERAGE AREA/PERSON > EMPLOYEE NUMBER > AGENT

			2030	2025	2020	2015
Population	600		60000	19000	3600	600
Jobs	115					
			o	c	g	s
Employee No. %	15%		18%	38%	15%	26%
Jobs in one domain	17					
			o	c	g	s
APC	35		30	40	35	48
			2030	2025	2020	2015
M	5		35	25	15	5
Green Space Area	51.04					
otal area of A_pampus	5762700					
			o	c	g	s
Agent		Y2030	72	152	60	104
		Y2025	54	114	45	78
		Y2020	36	76	30	52
		Y2015	18	38	15	26

	APC(m²)	NUMBER	AREA(hm²)	PROXIMITY(m)
Year 2030	35	3	0.04	729

Evaluation Parameter and Formula:

P = Total Population;
c% = (Employee number/P)%
APC= Total Area Per Capita;
M = Members in one group;
N= Total Number of Activities;
Forest area = 51hm²

Area =P*64%*30%*cp*APC/10000;
Nmuber = P*0.64*30%*cp/M;
Proximity =(APC*M/π)^(1/2)/0.75*10.
Green space area =Area + Forest area

APC: Average area per capita;
NUMBER: Average number of activities;
AREA: Average range of activities;
PROXIMITY: Average distance from location of activities to local inhabi

Sub-system of Simulation

- 4 basic types sorted by system
- type: commercial, green space, office and service

	APC(m²)	NUMBER	AREA(hm²)	PROXIMITY(m)
Year 2030	35	3	0. 04	729

Commercial

	APC	NUMBER	AREA	PROXIMITY
Year 2015	40	9	0. 12	458
Year 2020	40	18	0. 70	324
Year 2025	40	55	3. 70	182
Year 2030	40	125	11. 67	121

Green space

	APC	NUMBER	AREA	PROXIMITY
Year 2015	35	3	51. 04	729
Year 2020	35	7	51. 24	515
Year 2025	35	22	52. 28	290
Year 2030	35	49	55. 03	193

Service

	APC	NUMBER	AREA	PROXIMITY
Year 2015	48	6	0. 10	554
Year 2020	48	12	0. 58	391
Year 2025	48	38	3. 04	220
Year 2030	48	86	9. 58	146

Office

	APC	NUMBER	AREA	PROXIMITY
Year 2015	30	4	0. 04	665
Year 2020	30	8	0. 25	470
Year 2025	30	26	1. 31	264
Year 2030	30	59	4. 15	176

APC: Average area per capita;
NUMBER: Average number of activities;
AREA: Average range of activities;
PROXIMITY: Average distance from location of activities to local inhabi

EcoHomes (http://en.wikipedia.org/wiki/EcoHomes)

EcoHomes is an environmental rating scheme for homes in the United Kingdom. It is the domestic version of the Building Research Establishment’s Environmental Assessment Method BREEAM, which can also be applied to a variety of non-residential buildings. It was replaced by the Code for Sustainable Homes in April 2007. EcoHomes can be applied to new private and social housing schemes, as well as in the case of major refurbishment. Special assessments can be made of communal housing such as student halls of residence and care homes. EcoHomes was first developed and used commercially in 2000, EcoHomes Assessments fall under one of four versions, Pre-2002, 2003, 2005 or the current version 2006. The rating system has gone through four major revisions, the latest being EcoHomes 2006. As a consequence, it is not possible to compare homes built under one revision of the standard with homes built under another.

EcoHomes 2006

In particular, the 2006 version of EcoHomes increases the standards for energy efficiency, following the 2006 revisions energy efficiency requirements of the Building Regulations. It also incorporates a number of other changes. Under the scheme, credits are first given for standards reached in the following areas:

Energy

- Ene 1 - Dwelling Emission Rate
- Ene 2 - Building fabric
- Ene 3 - Drying space
- Ene 4 - Ecolabelled goods
- Ene 5 - Internal lighting
- Ene 6 - External lighting

Transport

- Tra 1 - Public transport
- Tra 2 - Cycle storage
- Tra 3 - Local amenities
- Tra 4 - Home office

Pollution

- Pol 1 - Insulant GWP
- Pol 2 - NOx emissions
- Pol 3 - Reduction of surface runoff
- Pol 4 - Renewable and low emission energy source
- Pol 5 - Flood risk

Materials

- Mat 1 - Environmental impact of materials
- Mat 2 - Responsible sourcing of materials: basic building elements
- Mat 3 - Responsible sourcing of materials: finishing elements
- Mat 4 - Recycling facilities
- Water
- Wat 1 - Internal potable water use
- Wat 2 - External potable water use

Land Use and Ecology

- Eco 1 - Ecological value of site
- Eco 2 - Ecological enhancement
- Eco 3 - Protection of ecological features
- Eco 4 - Change of ecological value of site
- Eco 5 - Building Footprint

Health and Wellbeing

- Hea 1 - Daylighting
- Hea 2 - Sound insulation
- Hea 3 - Private space

Management

- Man 1 - Home user guide
- Man 2 - Considerate constructors
- Man 3 - Construction site impacts
- Man 4 - Security

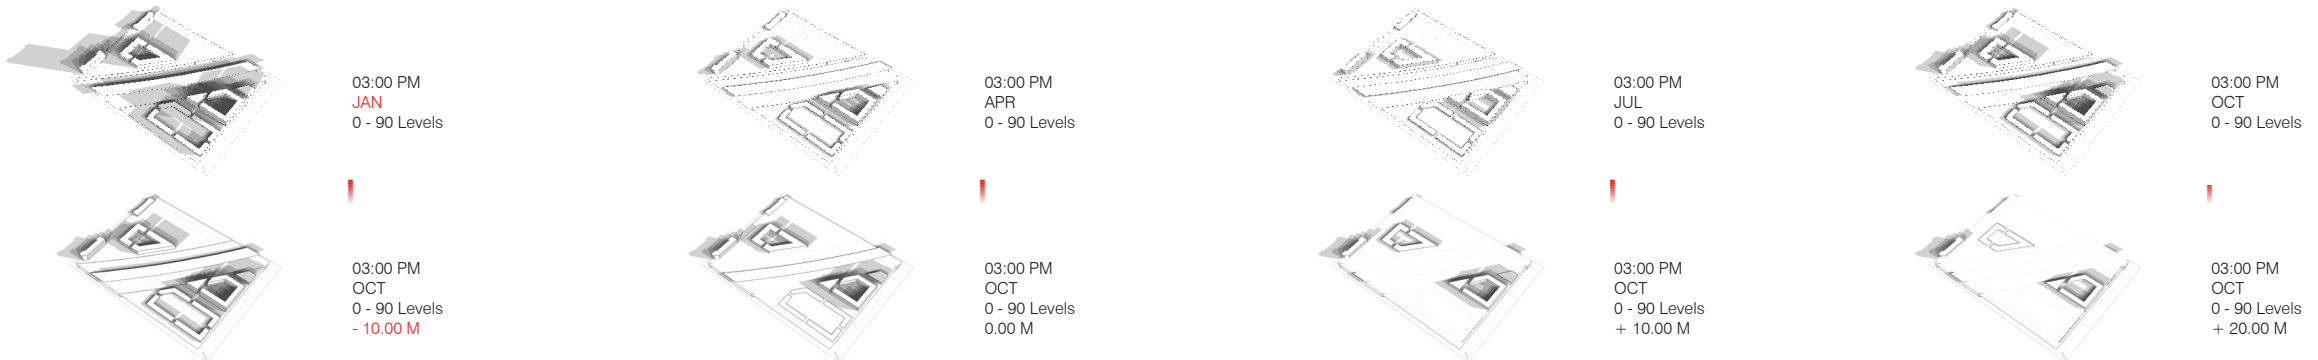

A weighting system is then used to designate the home as Pass, Good, Very Good, or Excellent. All homes funded by the Housing Corporation or by English Partnerships are required to meet the 2006 Very Good standard. Previously a Good designation sufficed. It is expected that this requirement will be replaced by compliance with the Government’s proposed Code for Sustainable Homes, currently being finalised, which is expected to be ‘closely aligned’ to EcoHomes [1].
