

A NEW TEMPORARY TRAM OR BUS STOP

The new temporary tram/bus stop is a lightweight tram/bus stop which can be used for occasions like constructions or temporary events. The stop is quick to set up, with its scaffolding-like design. Letting people be able to set up the stop with a minimum amount of disruptions to traffic and the neighborhood. The stop is made that it can comfortably be used by everyone, including people with disabilities, contributing to a future where mobility is for everyone.

Currently, temporary tram and bus stops are often overlooked when it comes to design. These stops take days to set up and damages the environment it is placed on. Additionally, these stops are often not

accessible for people with disabilities. Missing tactile paving, uneven surfaces, lack of resting places and lack of travel information is common with temporary stops.
