Agglomeration Benefits

increased job opportunities and access to services
shared economic space

Cities and regions inland

not present in cities and regions that are divided
by a national border

Cities and regions on borders

(Marlet et al., 2014)

01 |

PROBLEM

Cohesion policy

Narrow territorial and social disparities between regions in the EU

Difference in language and culture

Institutional and administrative differences

Lack of transport networks

Information backlog

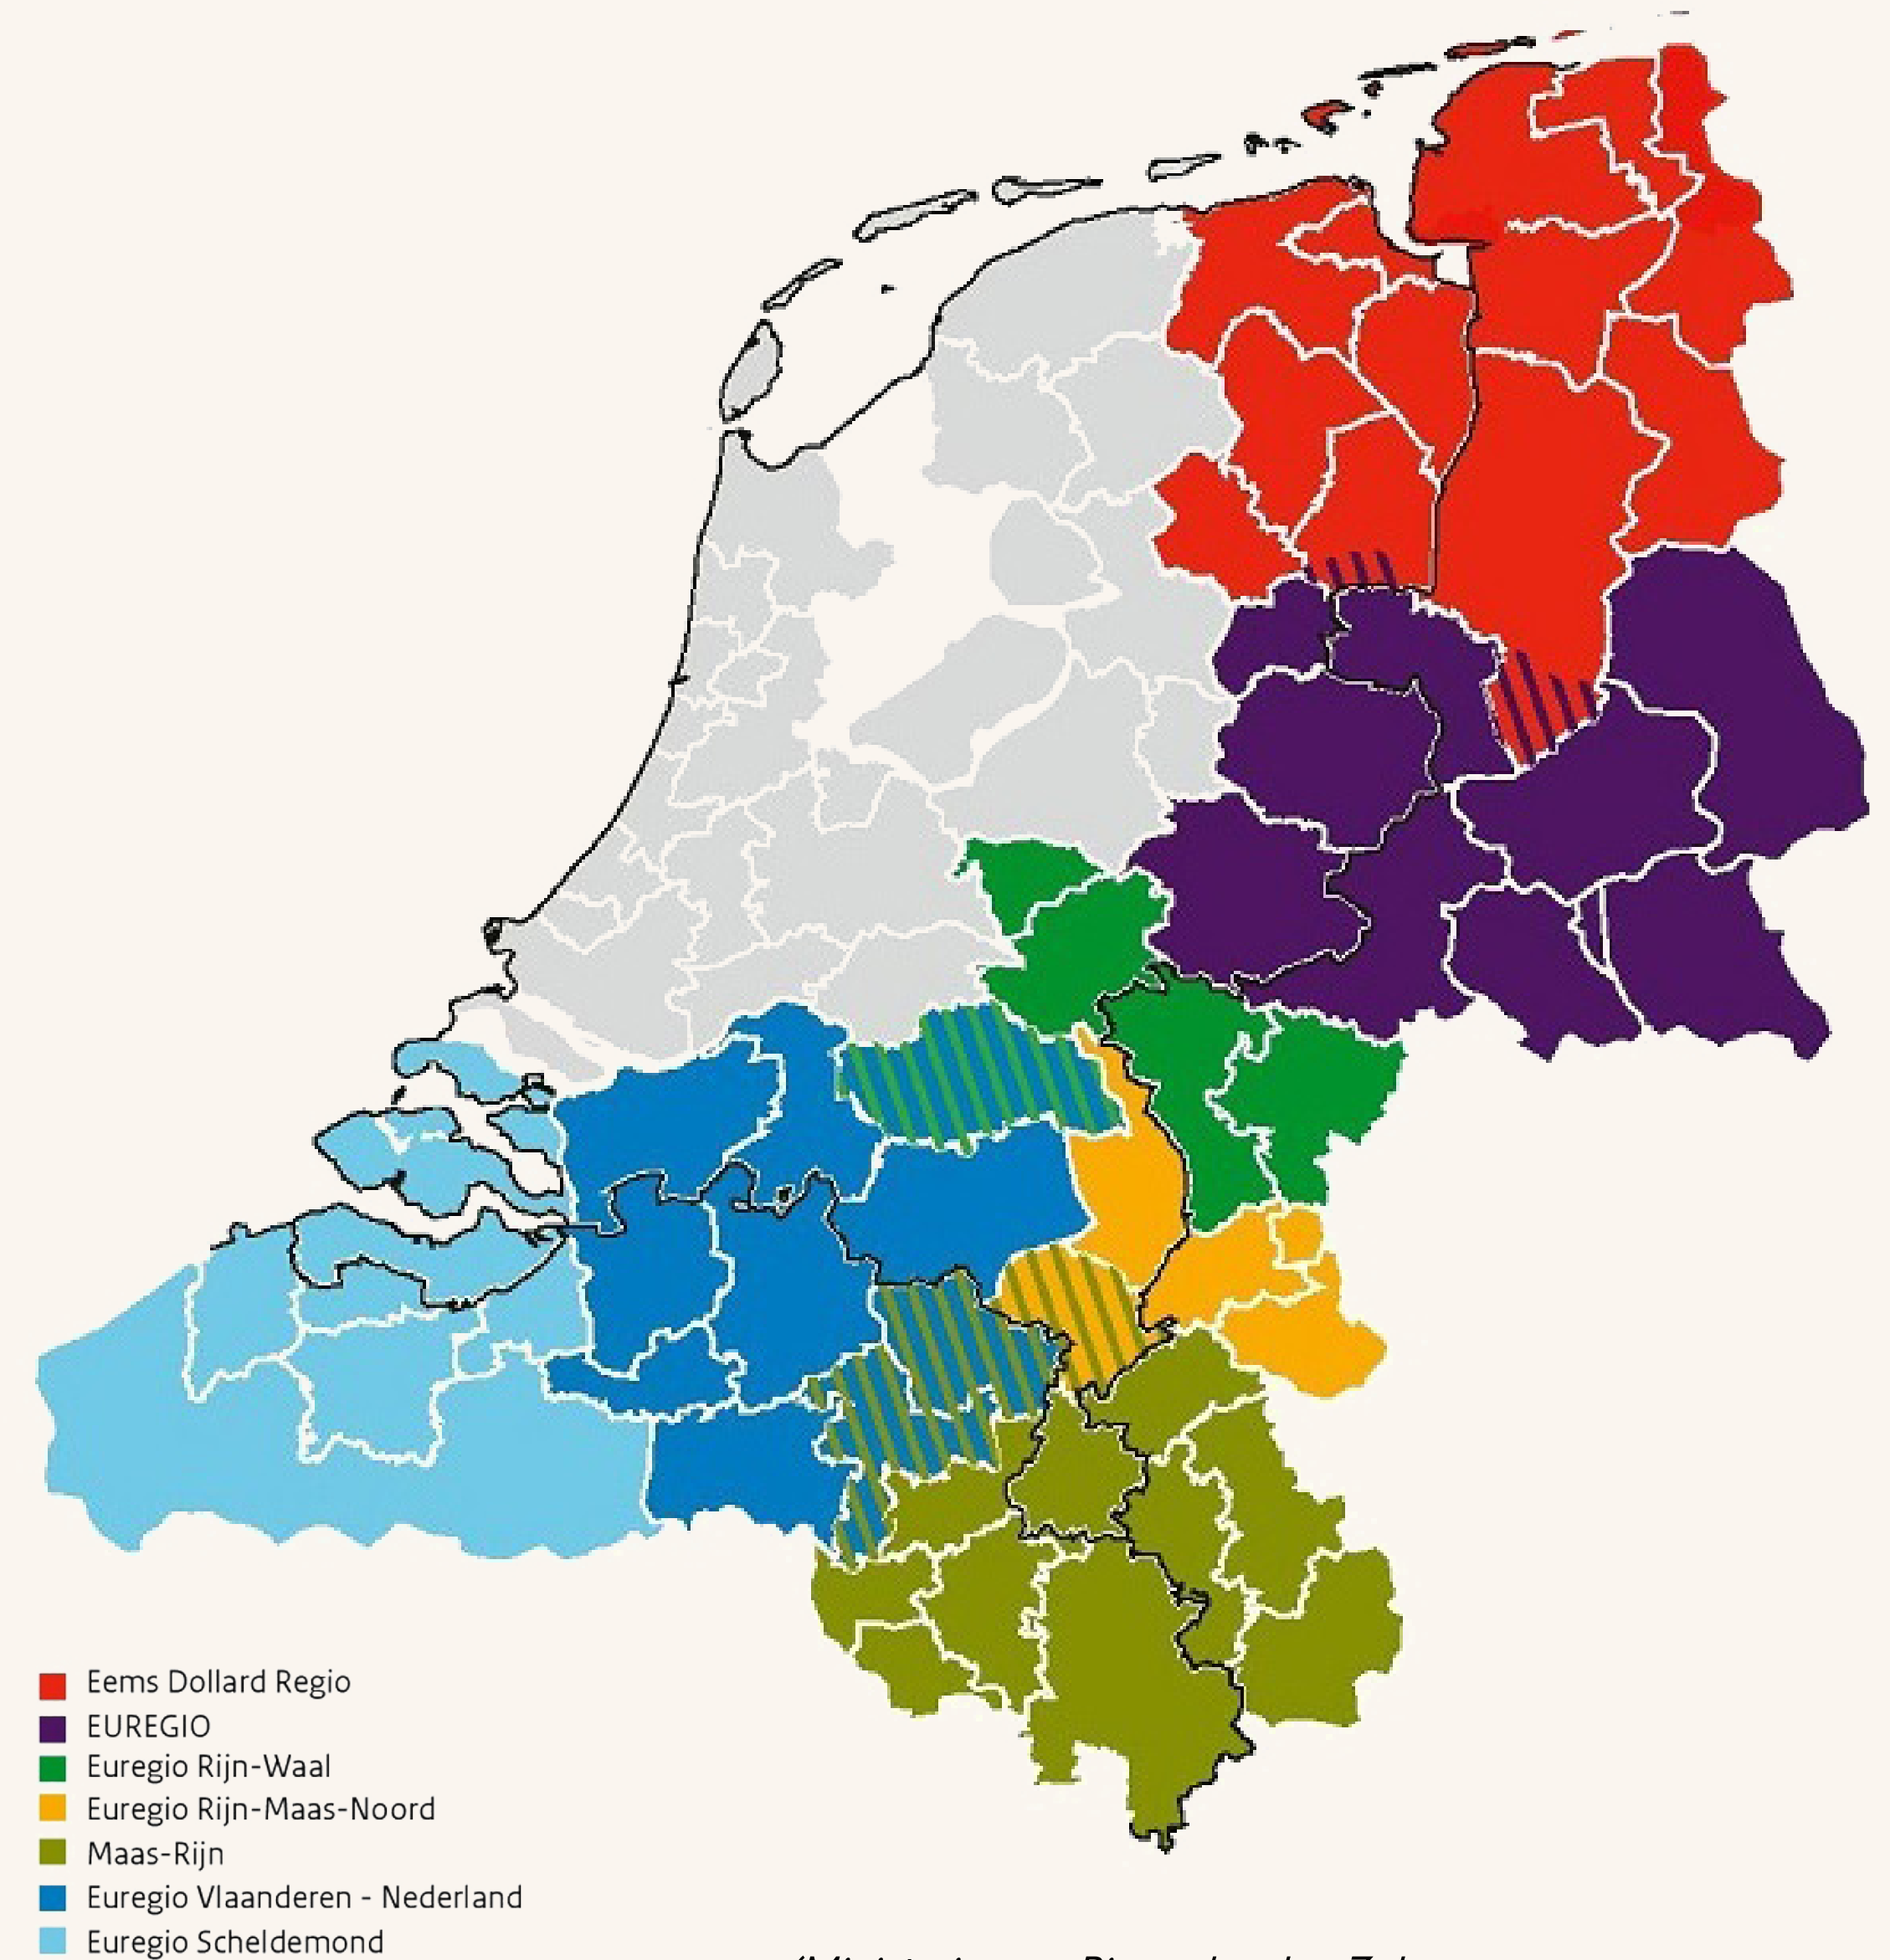

Psychological factors

Economic differences

(Ministerie van Binnenlandse Zaken en Koninkrijksrelaties, 2019)

(Ministerie van Binnenlandse Zaken en Koninkrijksrelaties, 2018)

01

PROBLEM

Institutional and administrative differences

Lack of transport networks

(Ministerie van Binnenlandse Zaken en Koninkrijksrelaties, 2019)

What transitional strategy can contribute to achieve a just and sustainable multi-modal network in a cross-border context?

CONCLUSION

ENVISIONING
THE FUTURE

04

VISION

In 2050 the region of Limburg will provide **mobility justice** by connecting the Dutch and Belgian provinces...

Connector /
new infrastructure

Connection to
railnetworks

Heritage site

Repurposed mine
infrastructure

Zwarteberg

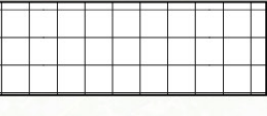

Reconnection

Green

Industry

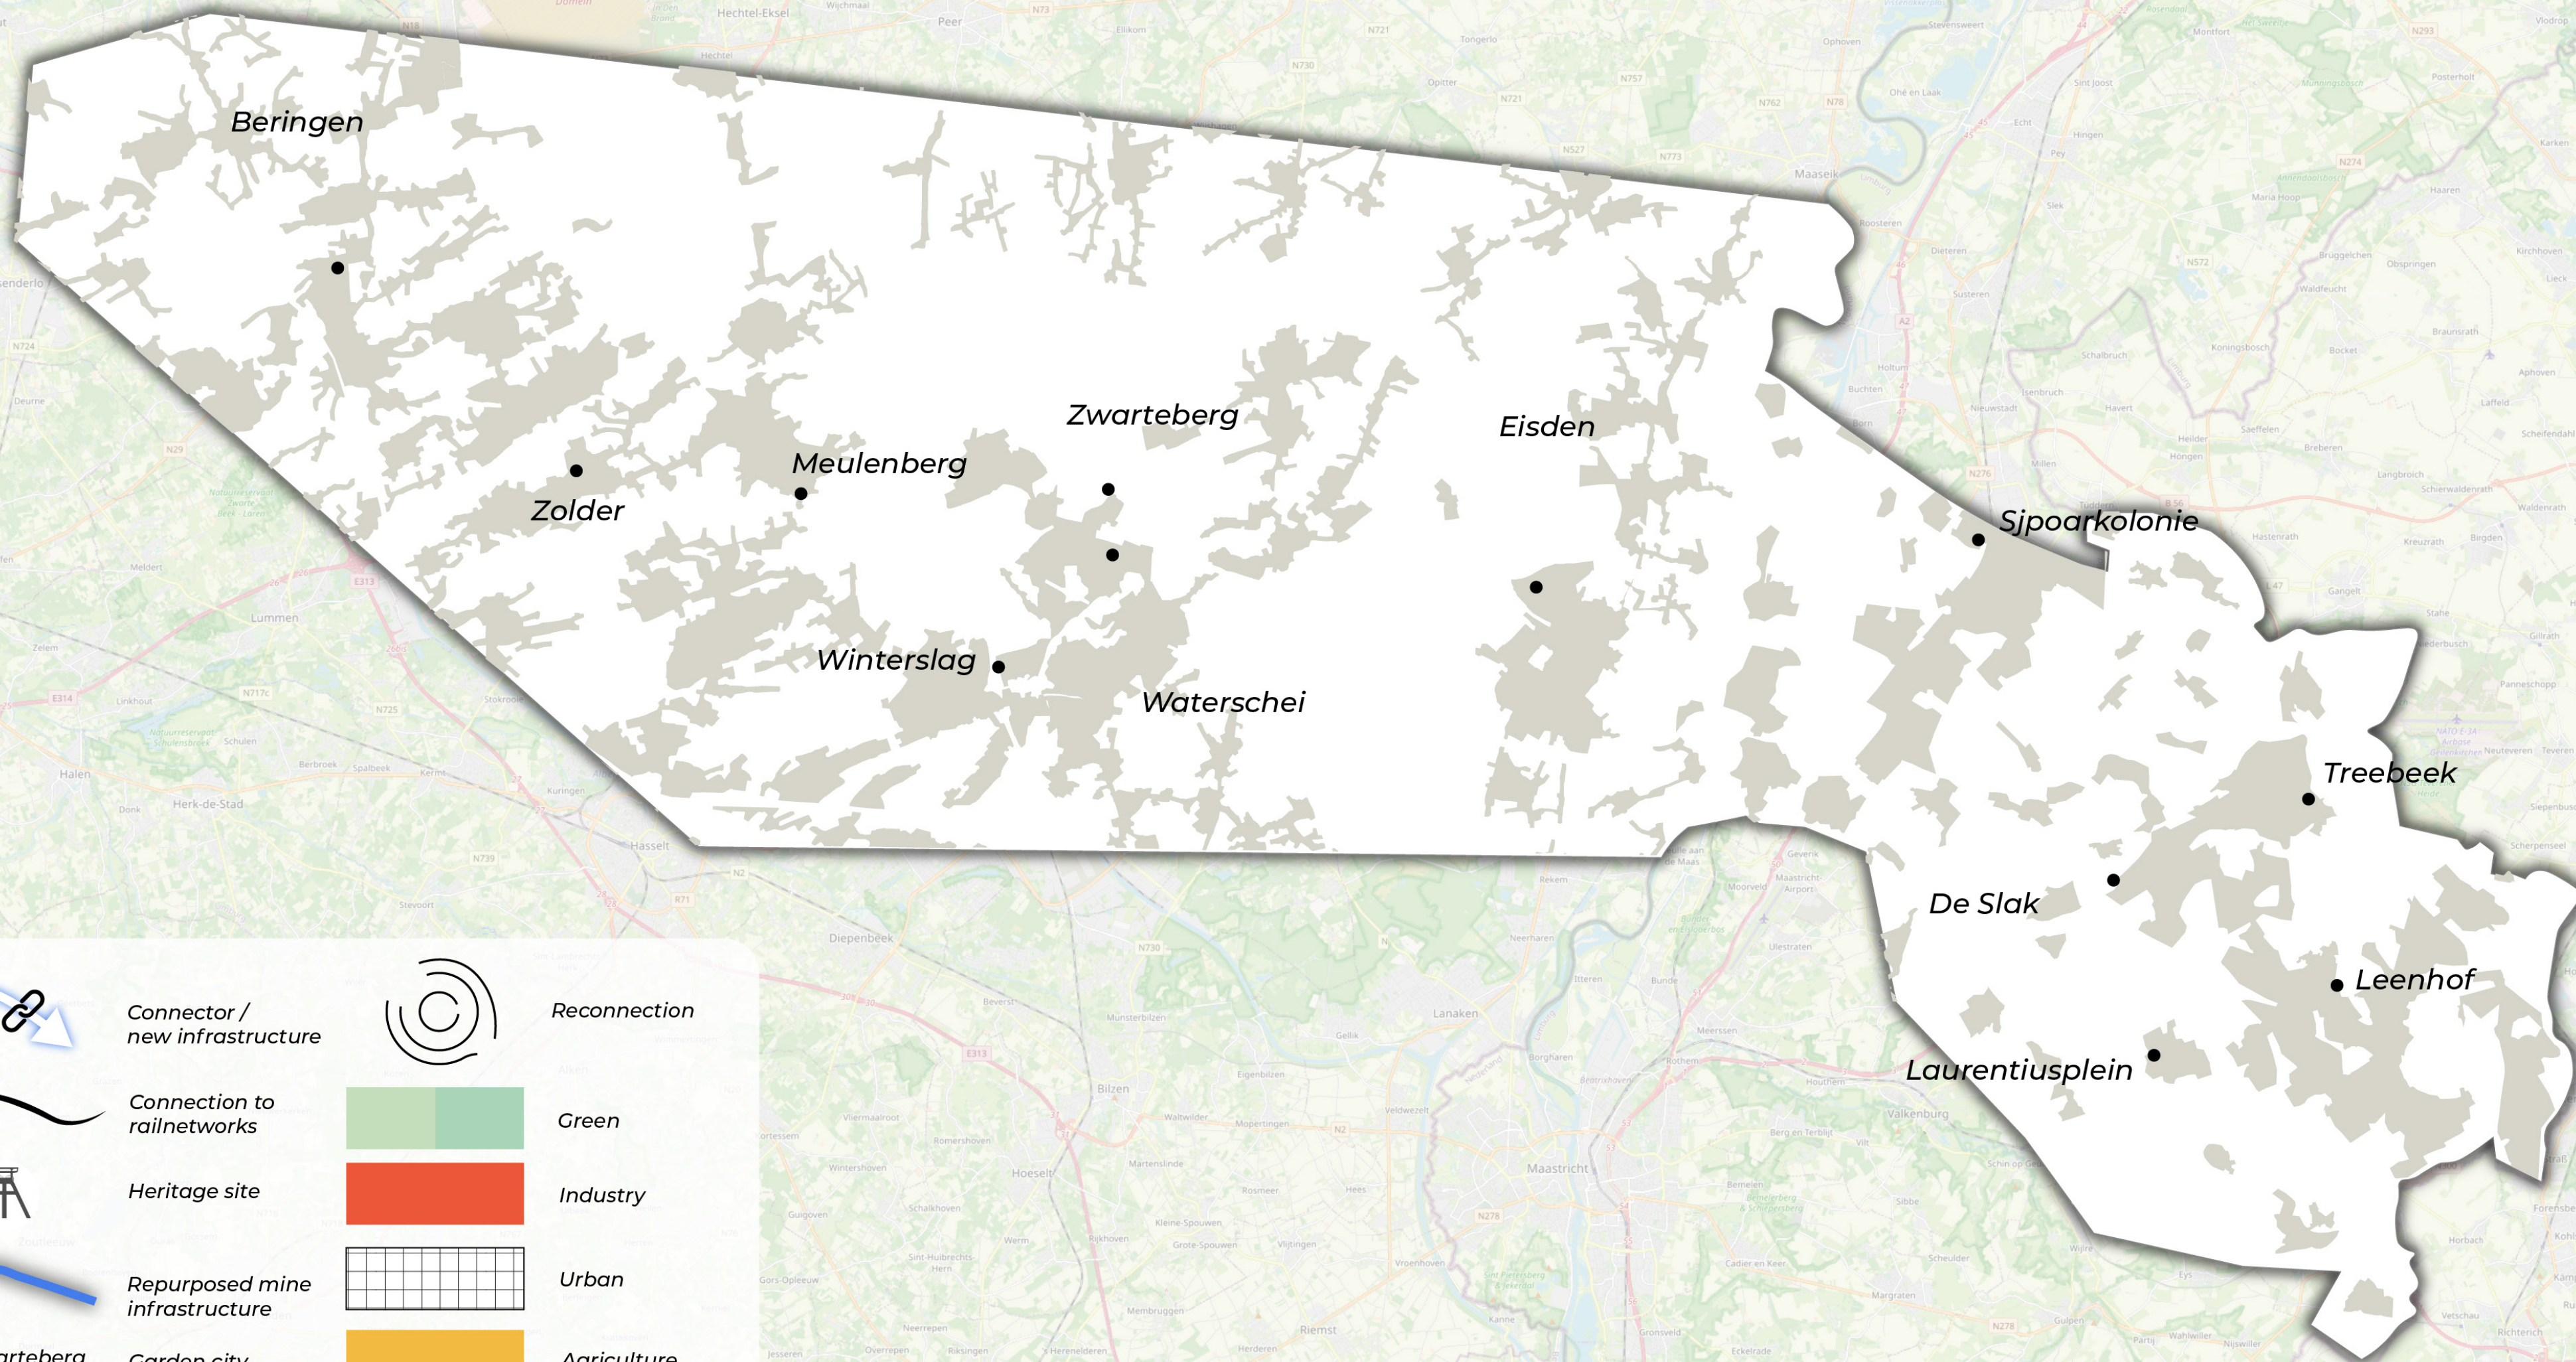

Urban

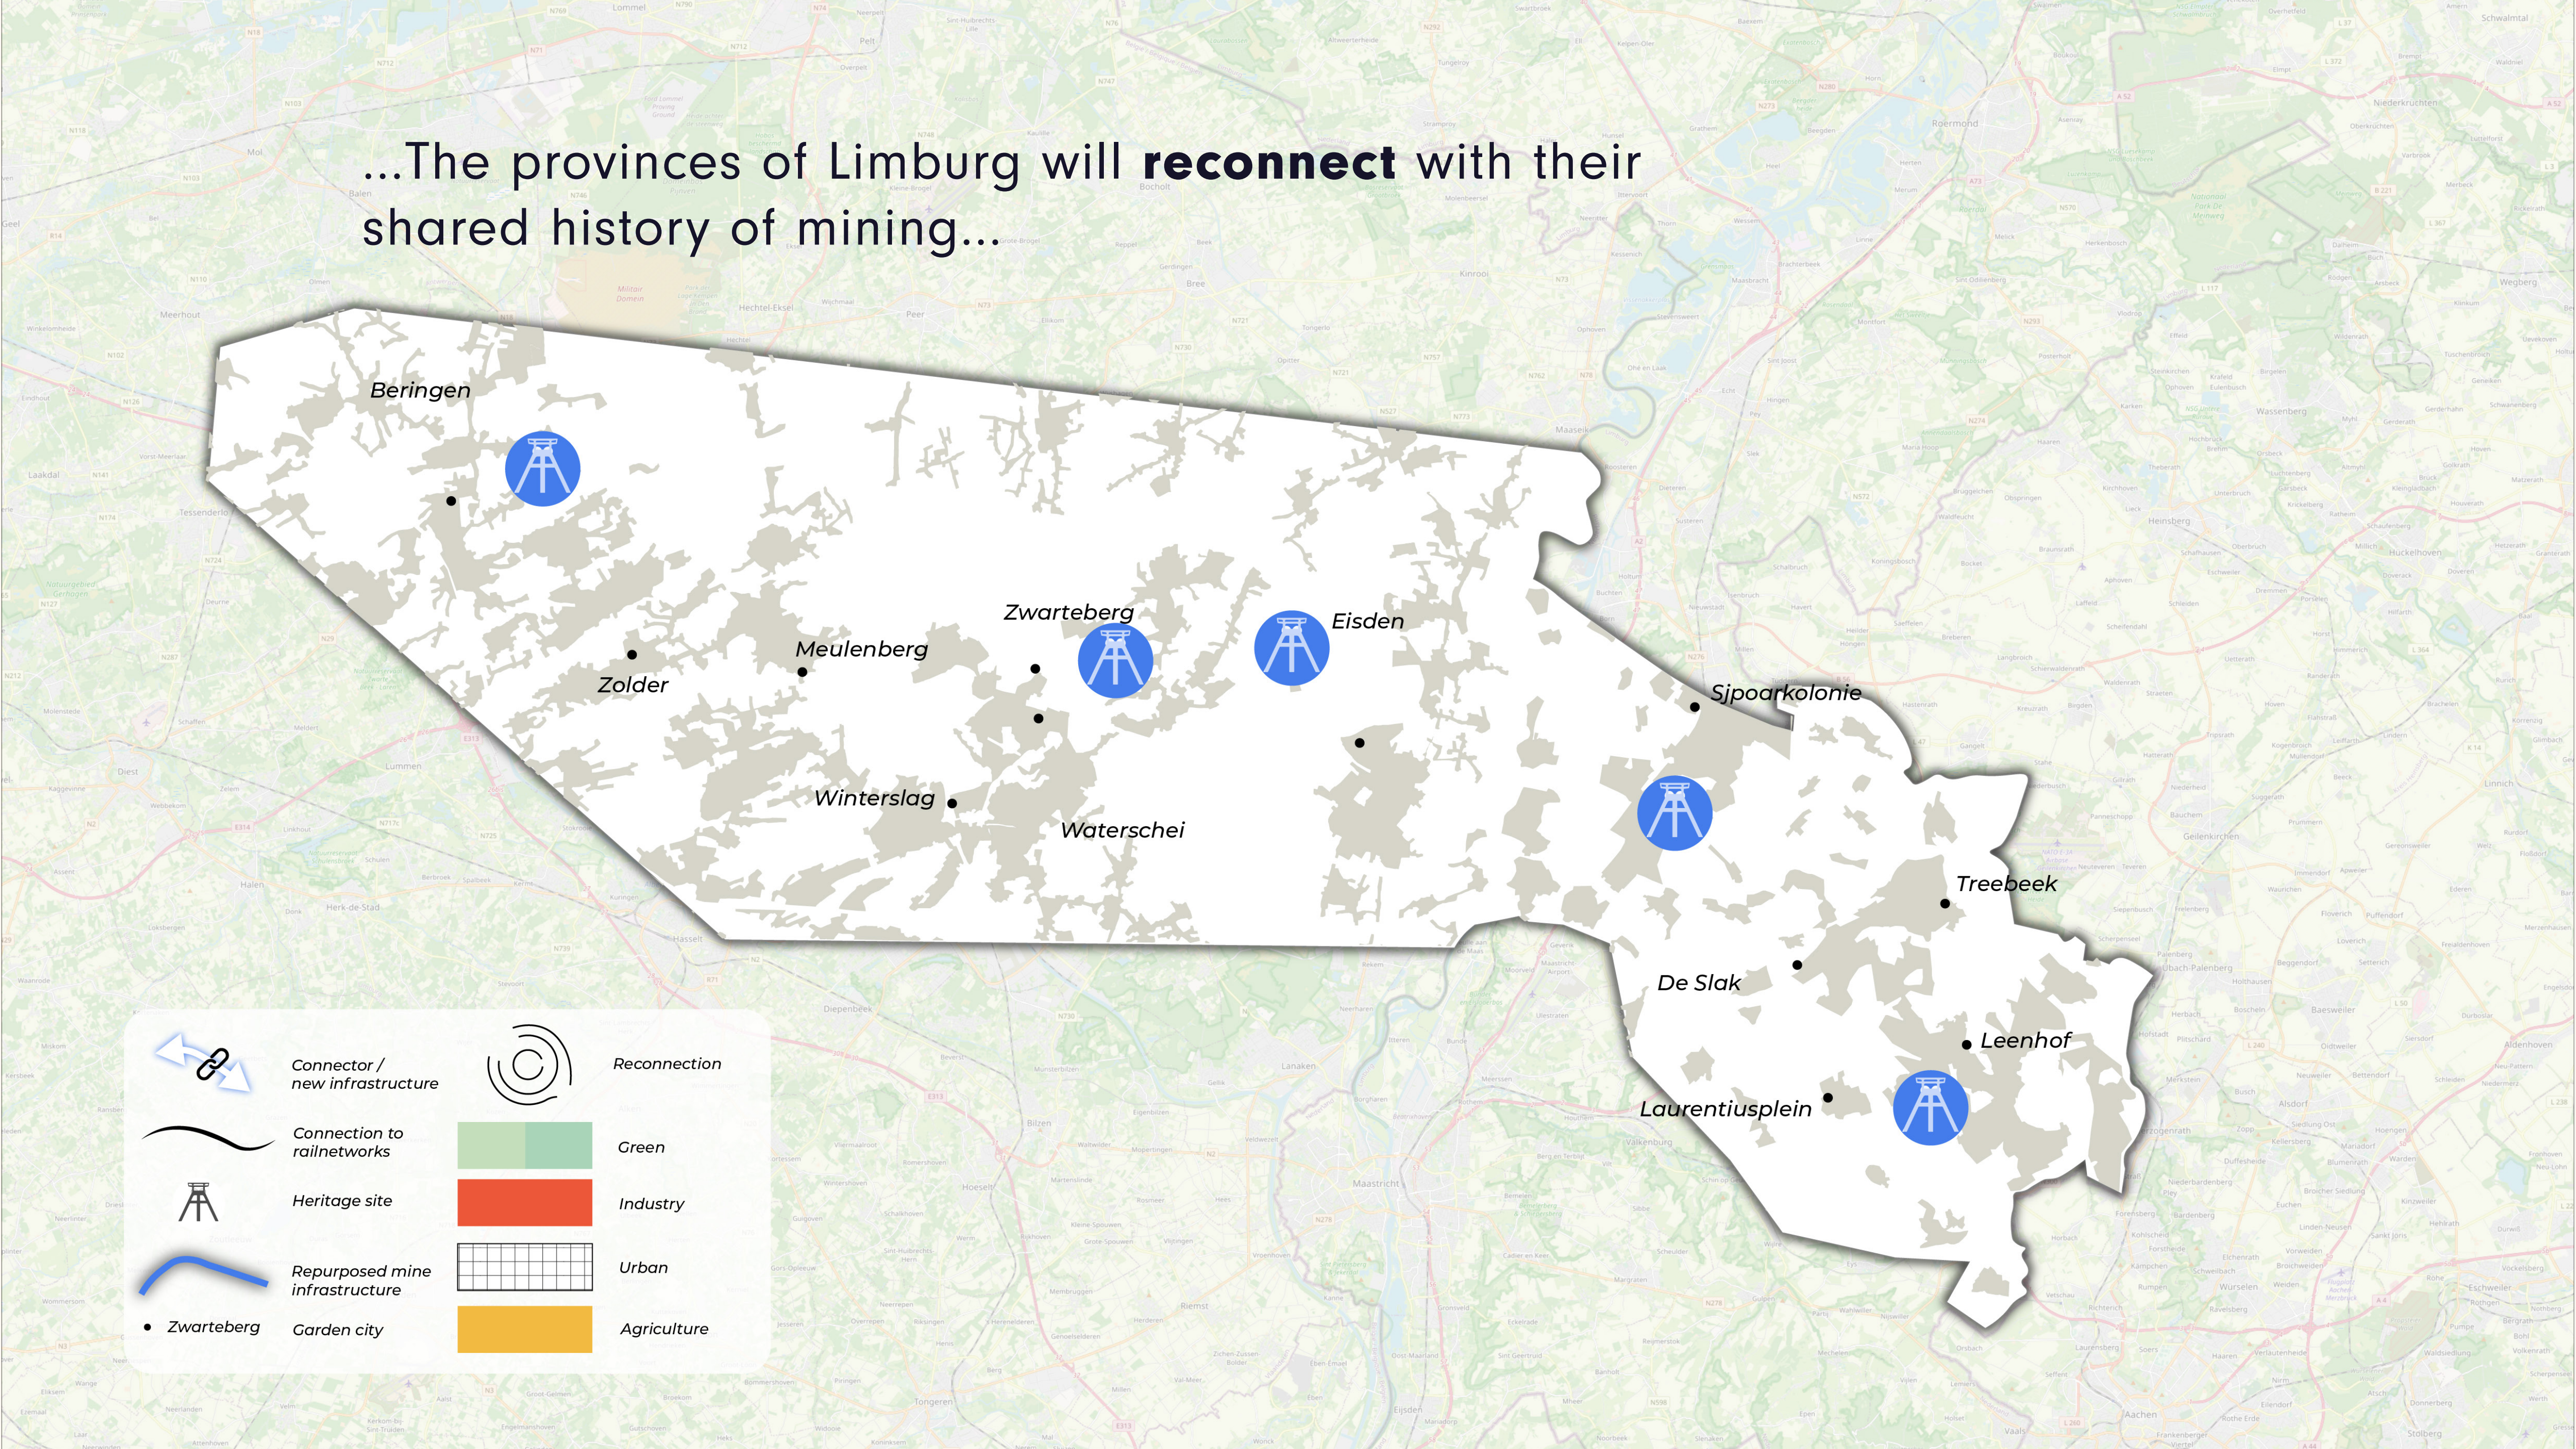

Agriculture

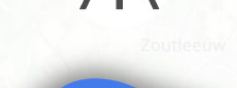

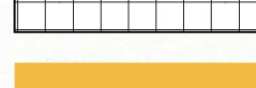

Garden city

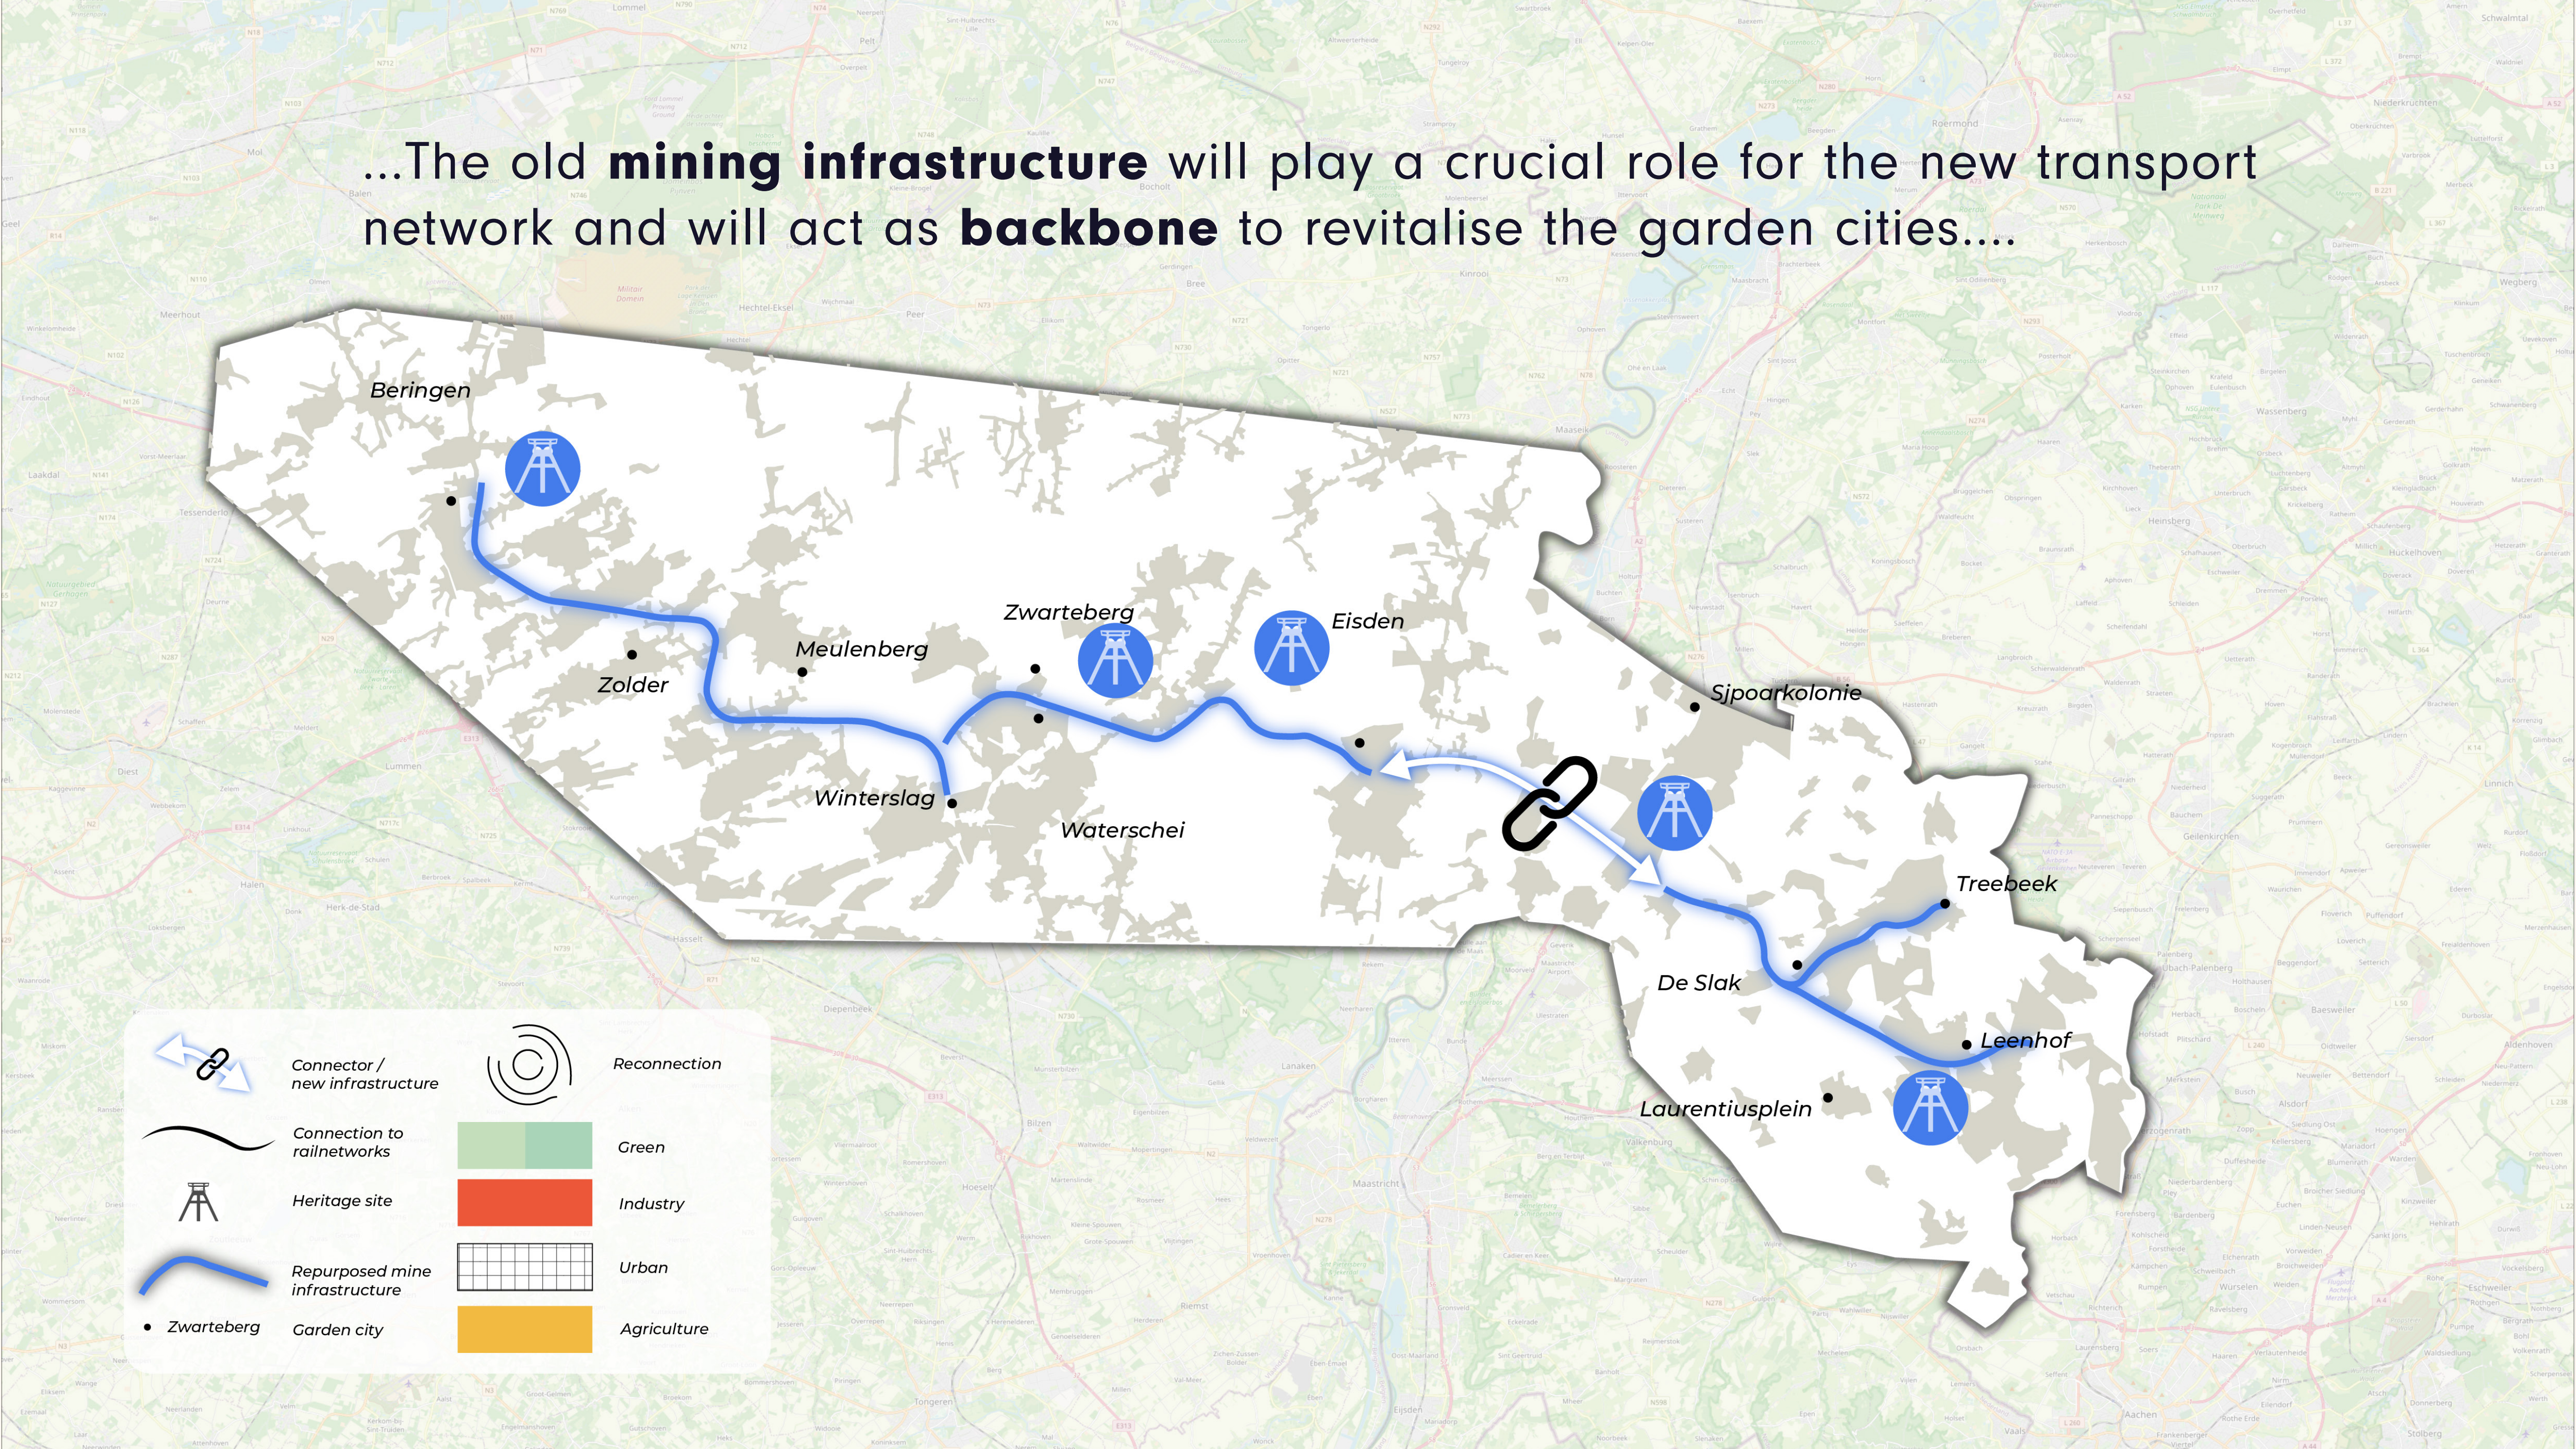

...The provinces of Limburg will **reconnect** with their shared history of mining...

	Connector / new infrastructure		Reconnection
	Connection to railnetworks		Green
	Heritage site		Industry
	Repurposed mine infrastructure		Urban
	Zwarteberg		Agriculture
	Garden city		

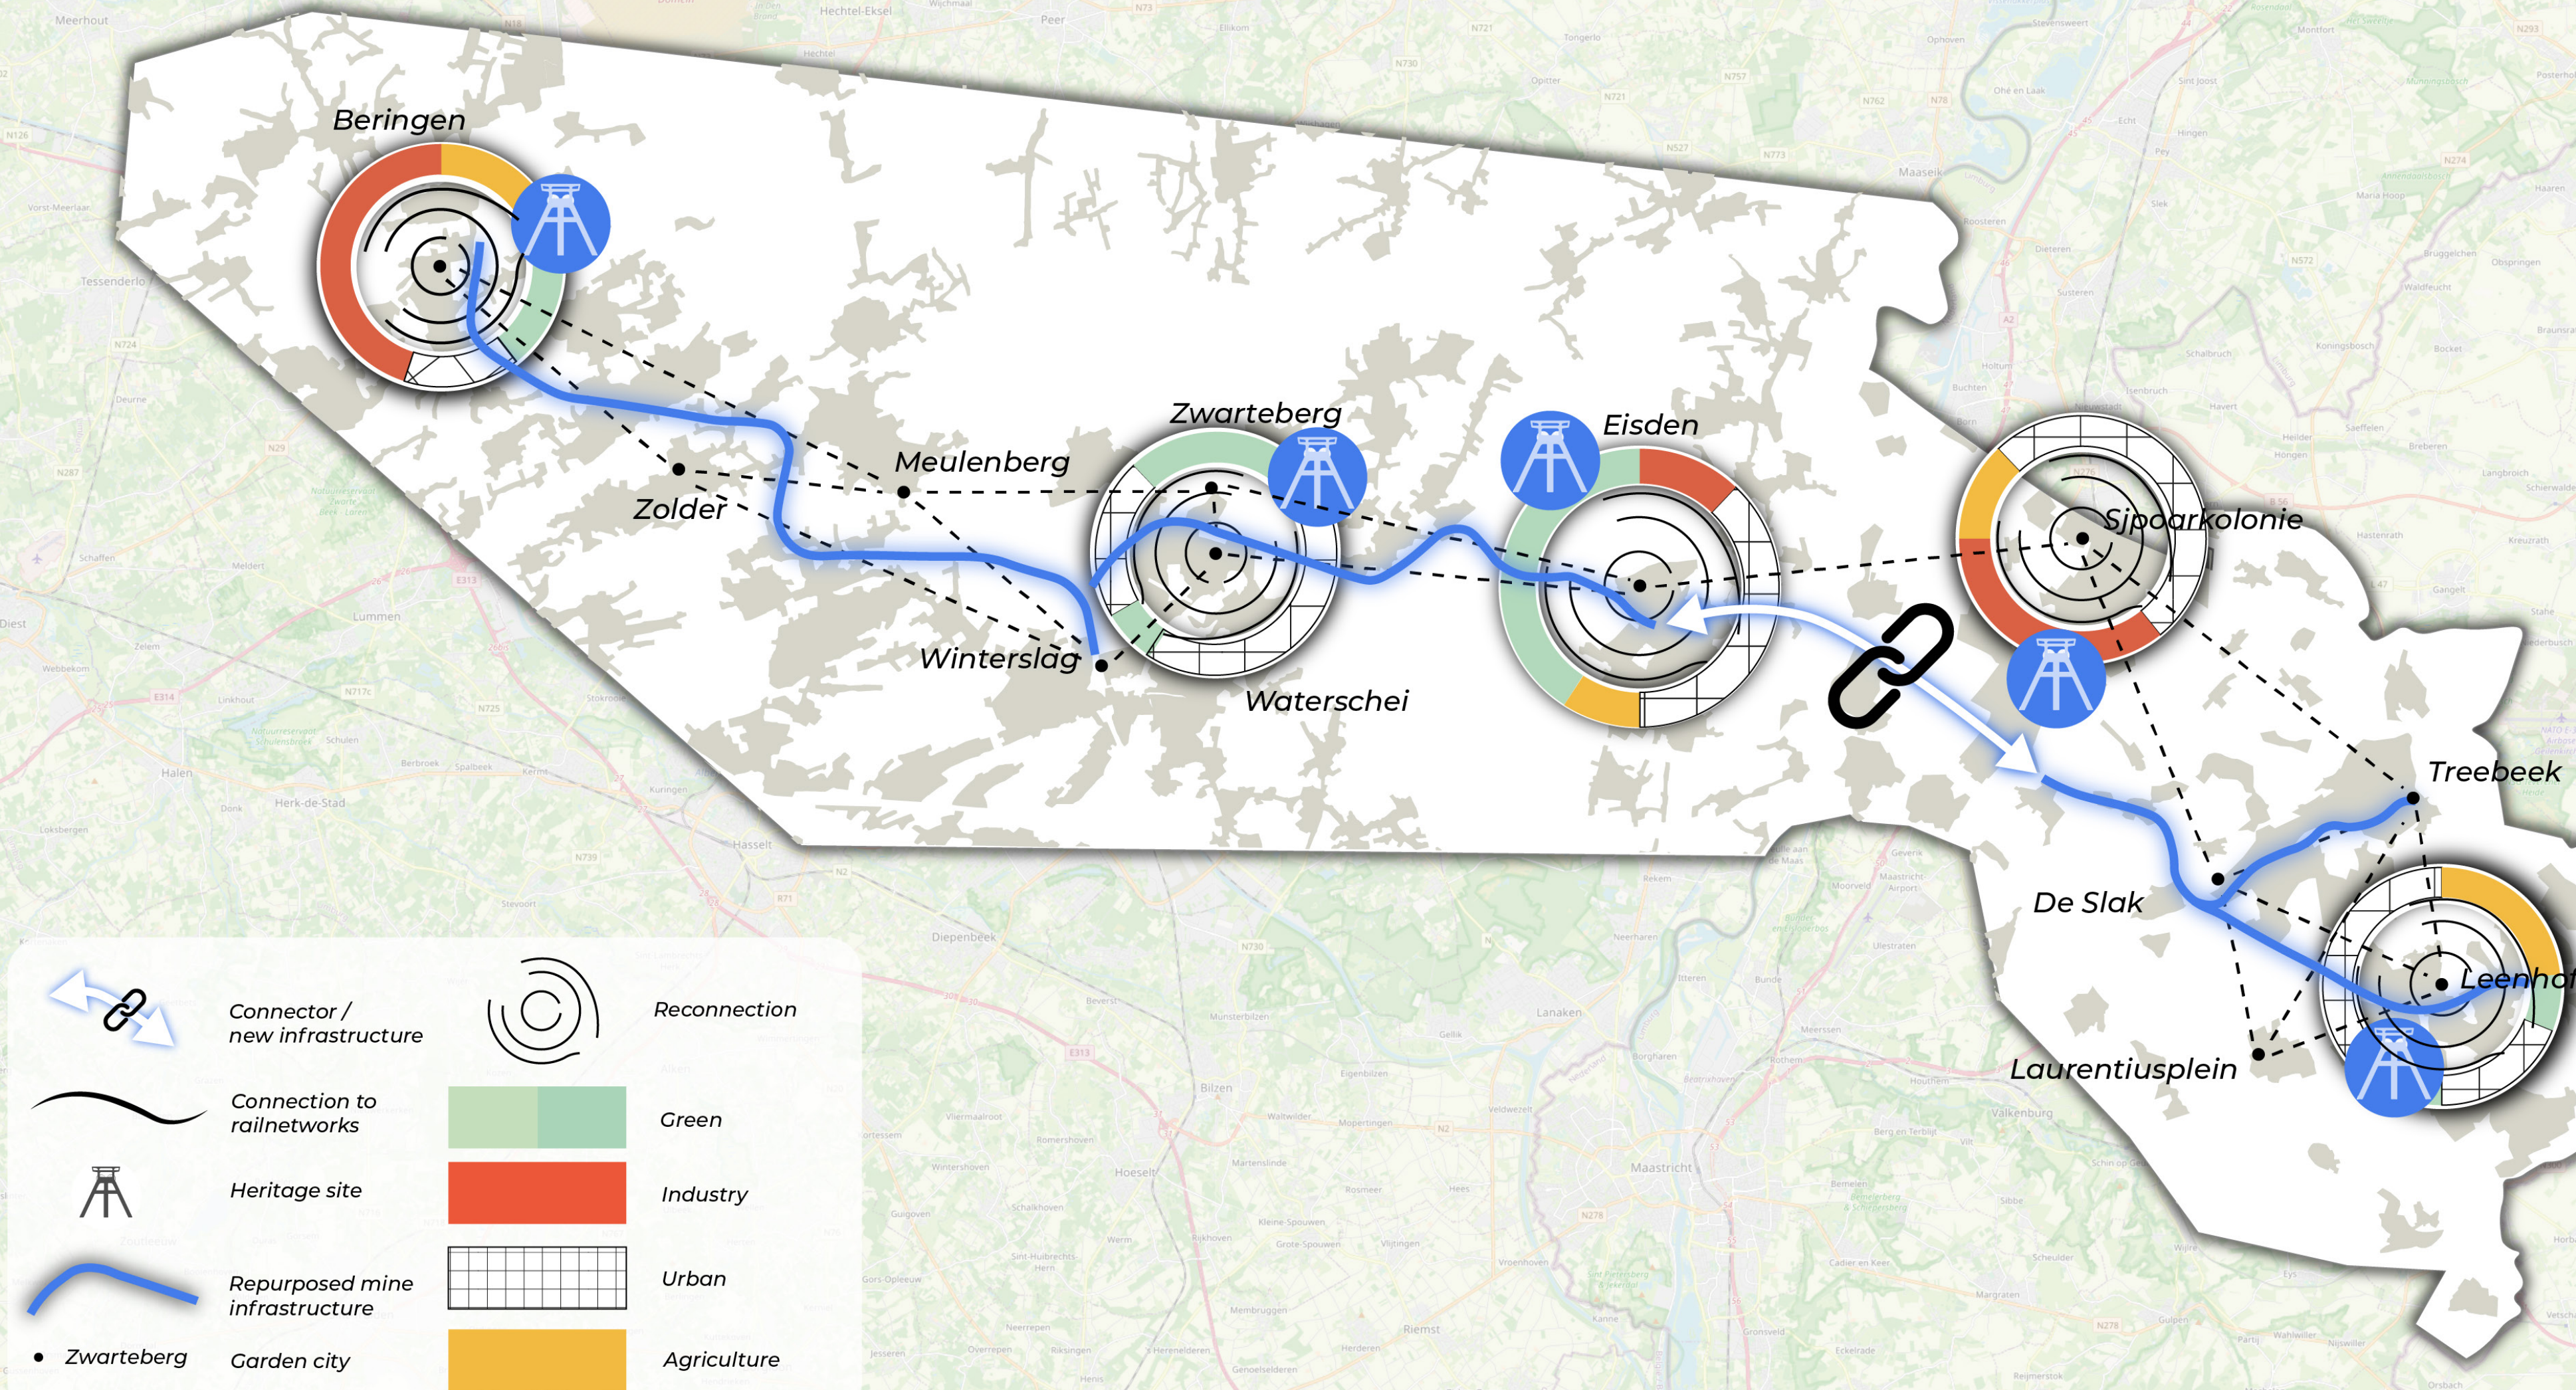

...The old **mining infrastructure** will play a crucial role for the new transport network and will act as **backbone** to revitalise the garden cities....

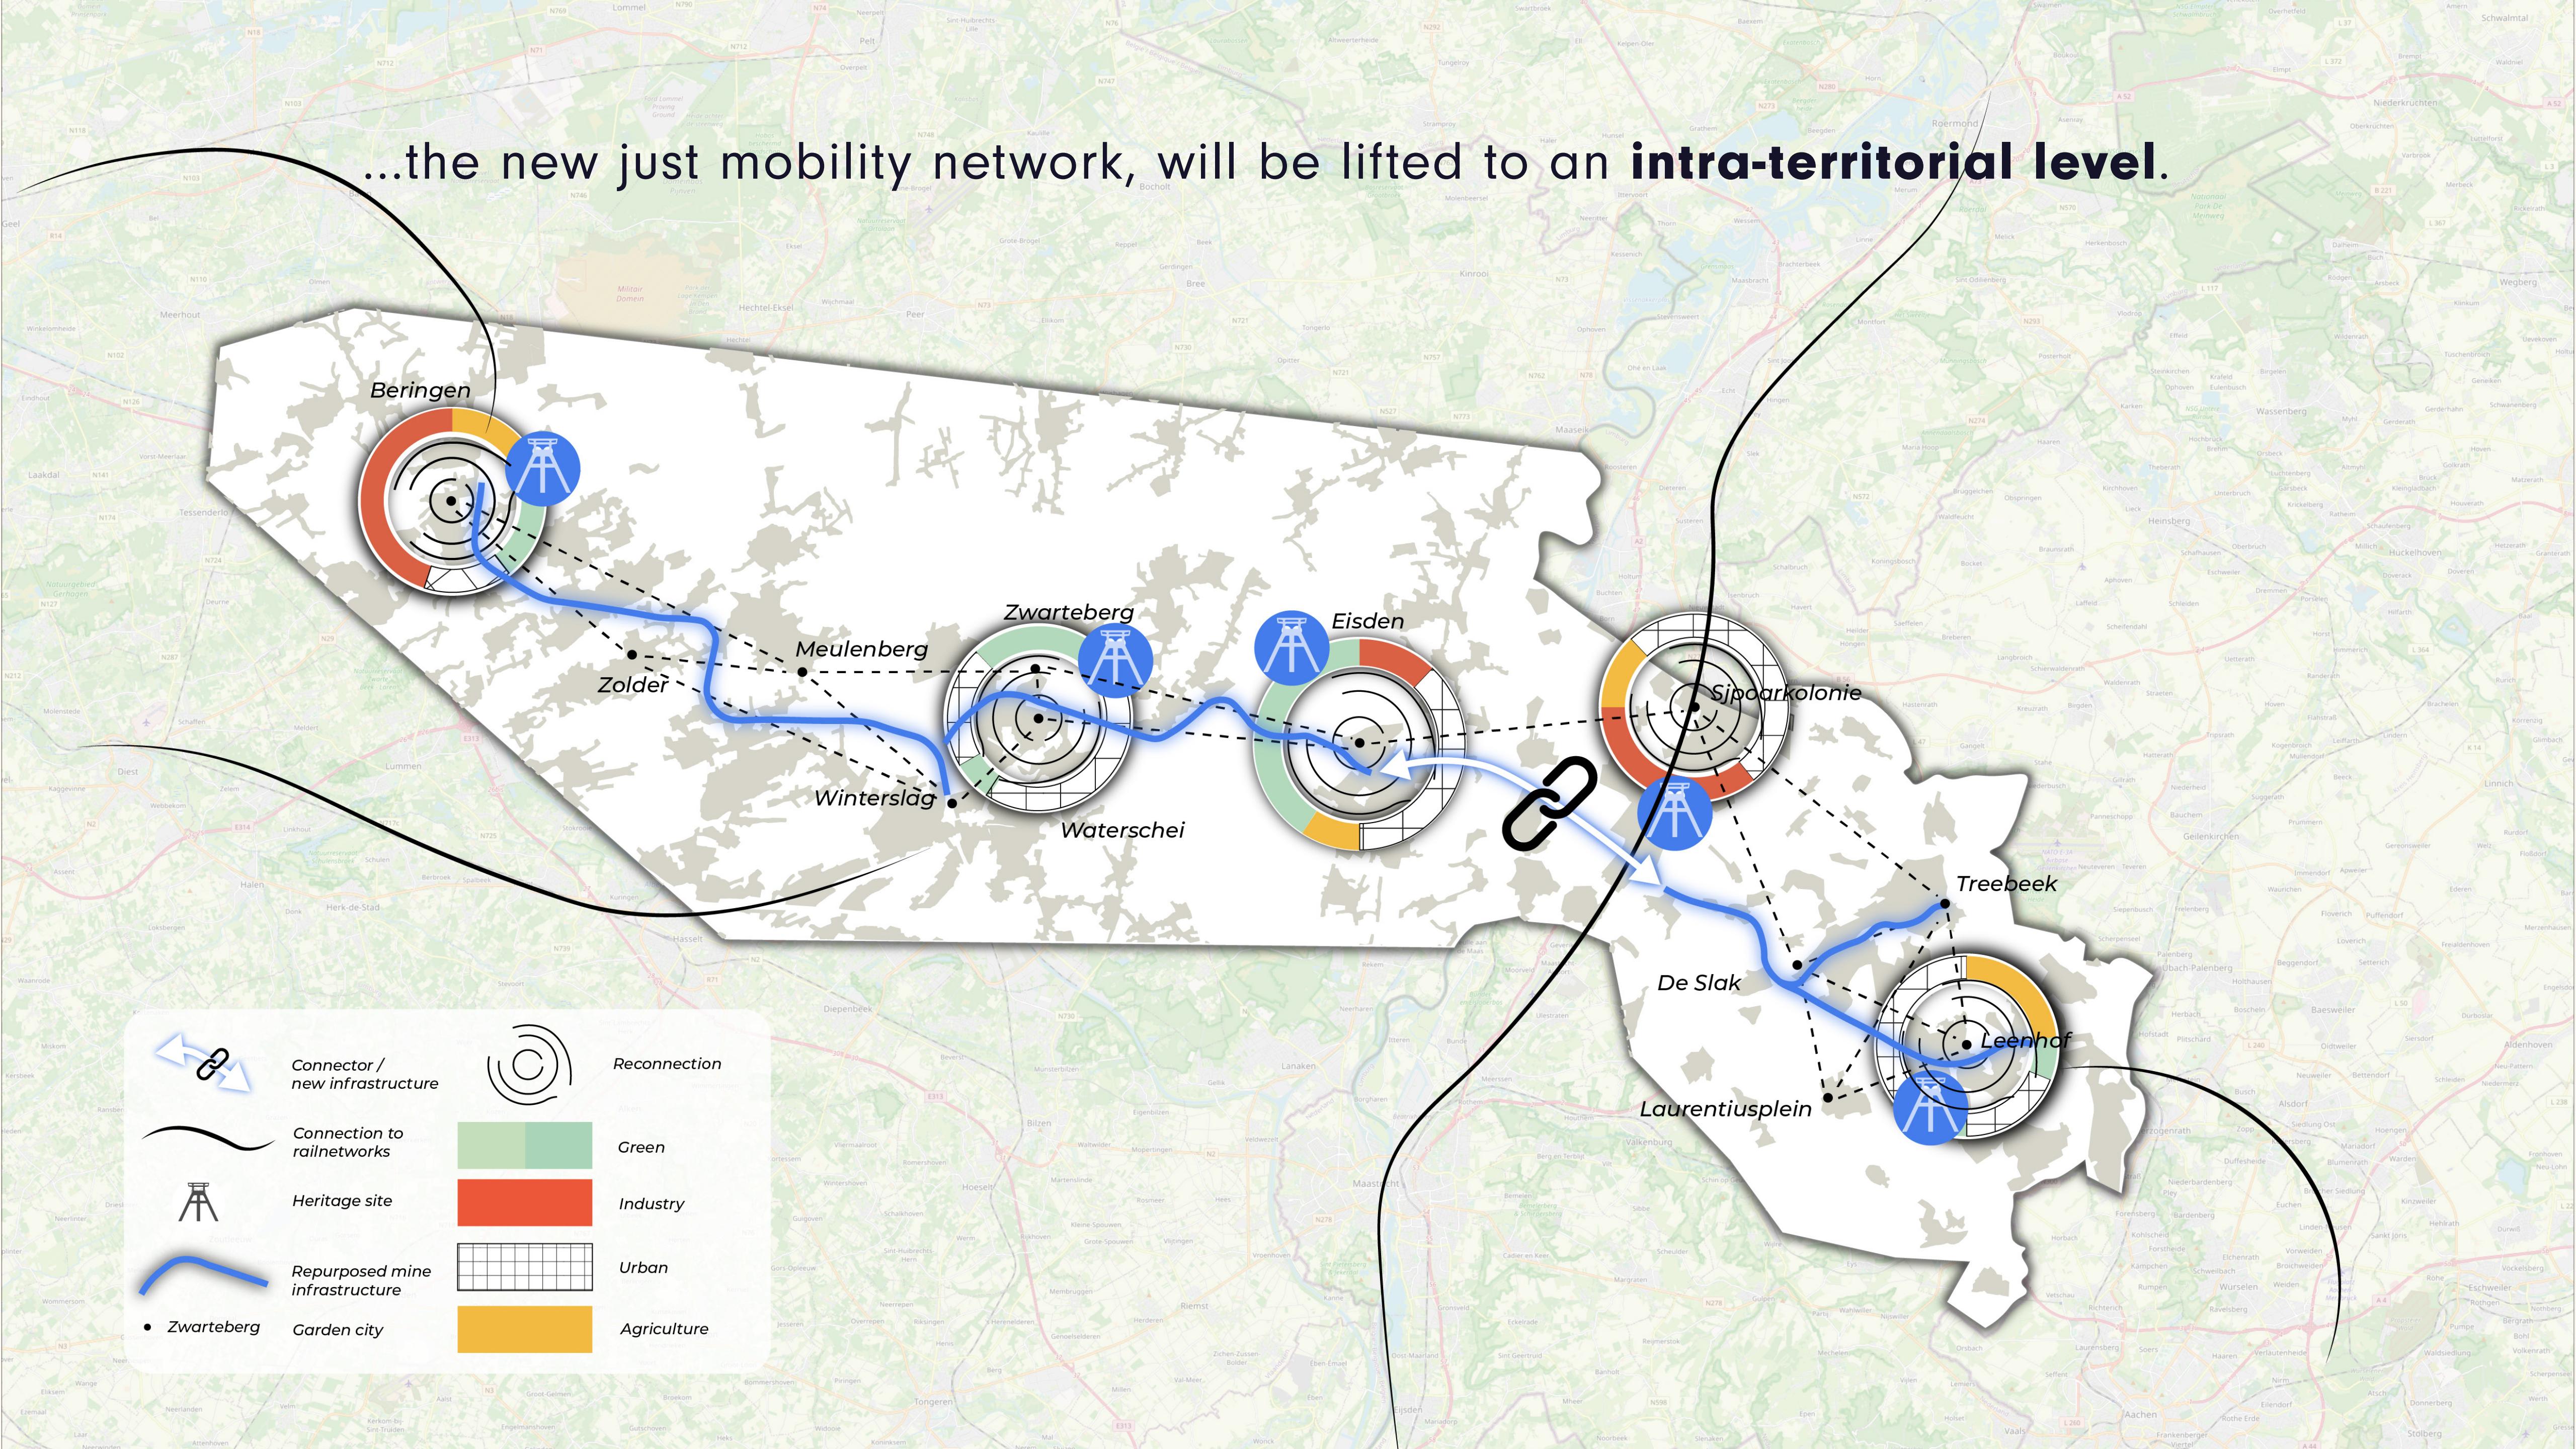

... By repurposing the old mining sites and garden cities...

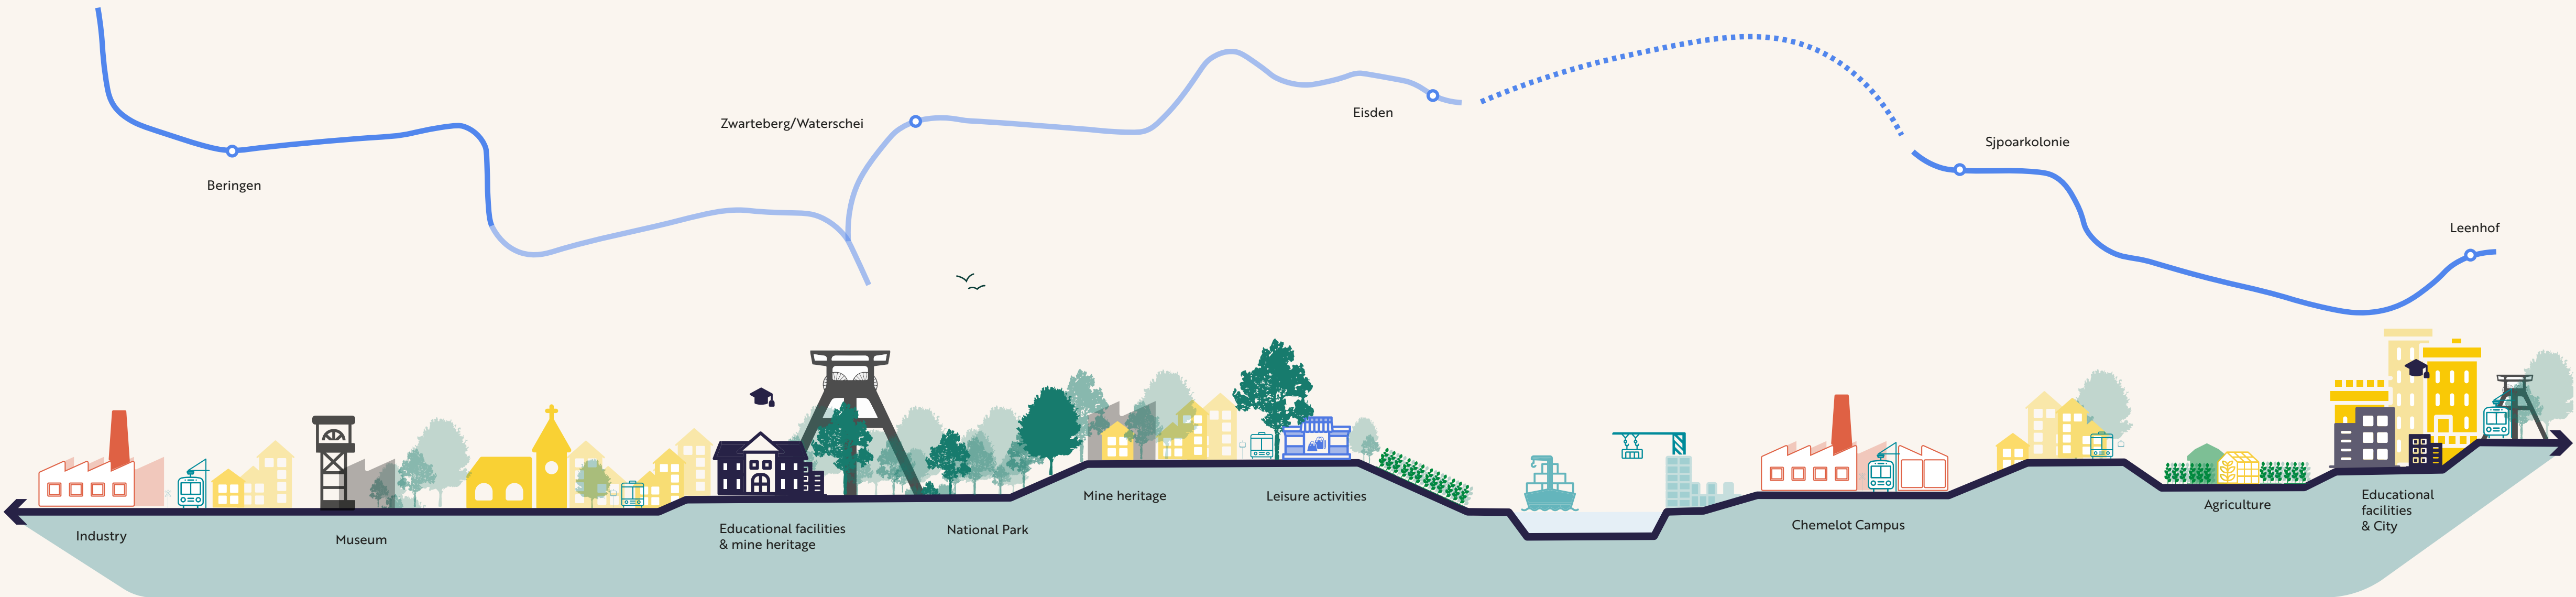

...to form nodes in the network and **rethinking the regional systems...**

...the new just mobility network, will be lifted to an **intra-territorial level**.

Sources

(reference)

Practical Implications

Spatial interventions needed to support a Multi Modal Backbone include the creating of multiple transfer hubs where passengers can switch services or mode of transport. The whole length of the backbone should support different transportation methods to attract as many users as possible. This means that space has to be reserved to account for the different infrastructures such as biking lanes, bus lanes and rail corridors. Having safety measures implemented is also of importance as the speeds between the different transport methods differ greatly. Safety measures could include guarding rails, safety walls or appropriate distances between the infrastructure that can be filled with green space. In dense urban areas this clustering of infrastructures will most likely not be possible. When clustering is not possible different routes should be integrated in the urban fabric with a minimum number of obstacles. Furthermore, there should always be a way to that the routes are still part of the backbone.

Looking Back

Sub Research Question 1

How has regional mobility evolved in the last 100 years?

Sub Research Question 2

What are the current travel patterns in the cross-border region of The Netherlands and Belgium?

Sub Research Question 3

How do the planning systems in The Netherlands and Belgium support different travel modes?

Looking Forward

Sub Research Question 4

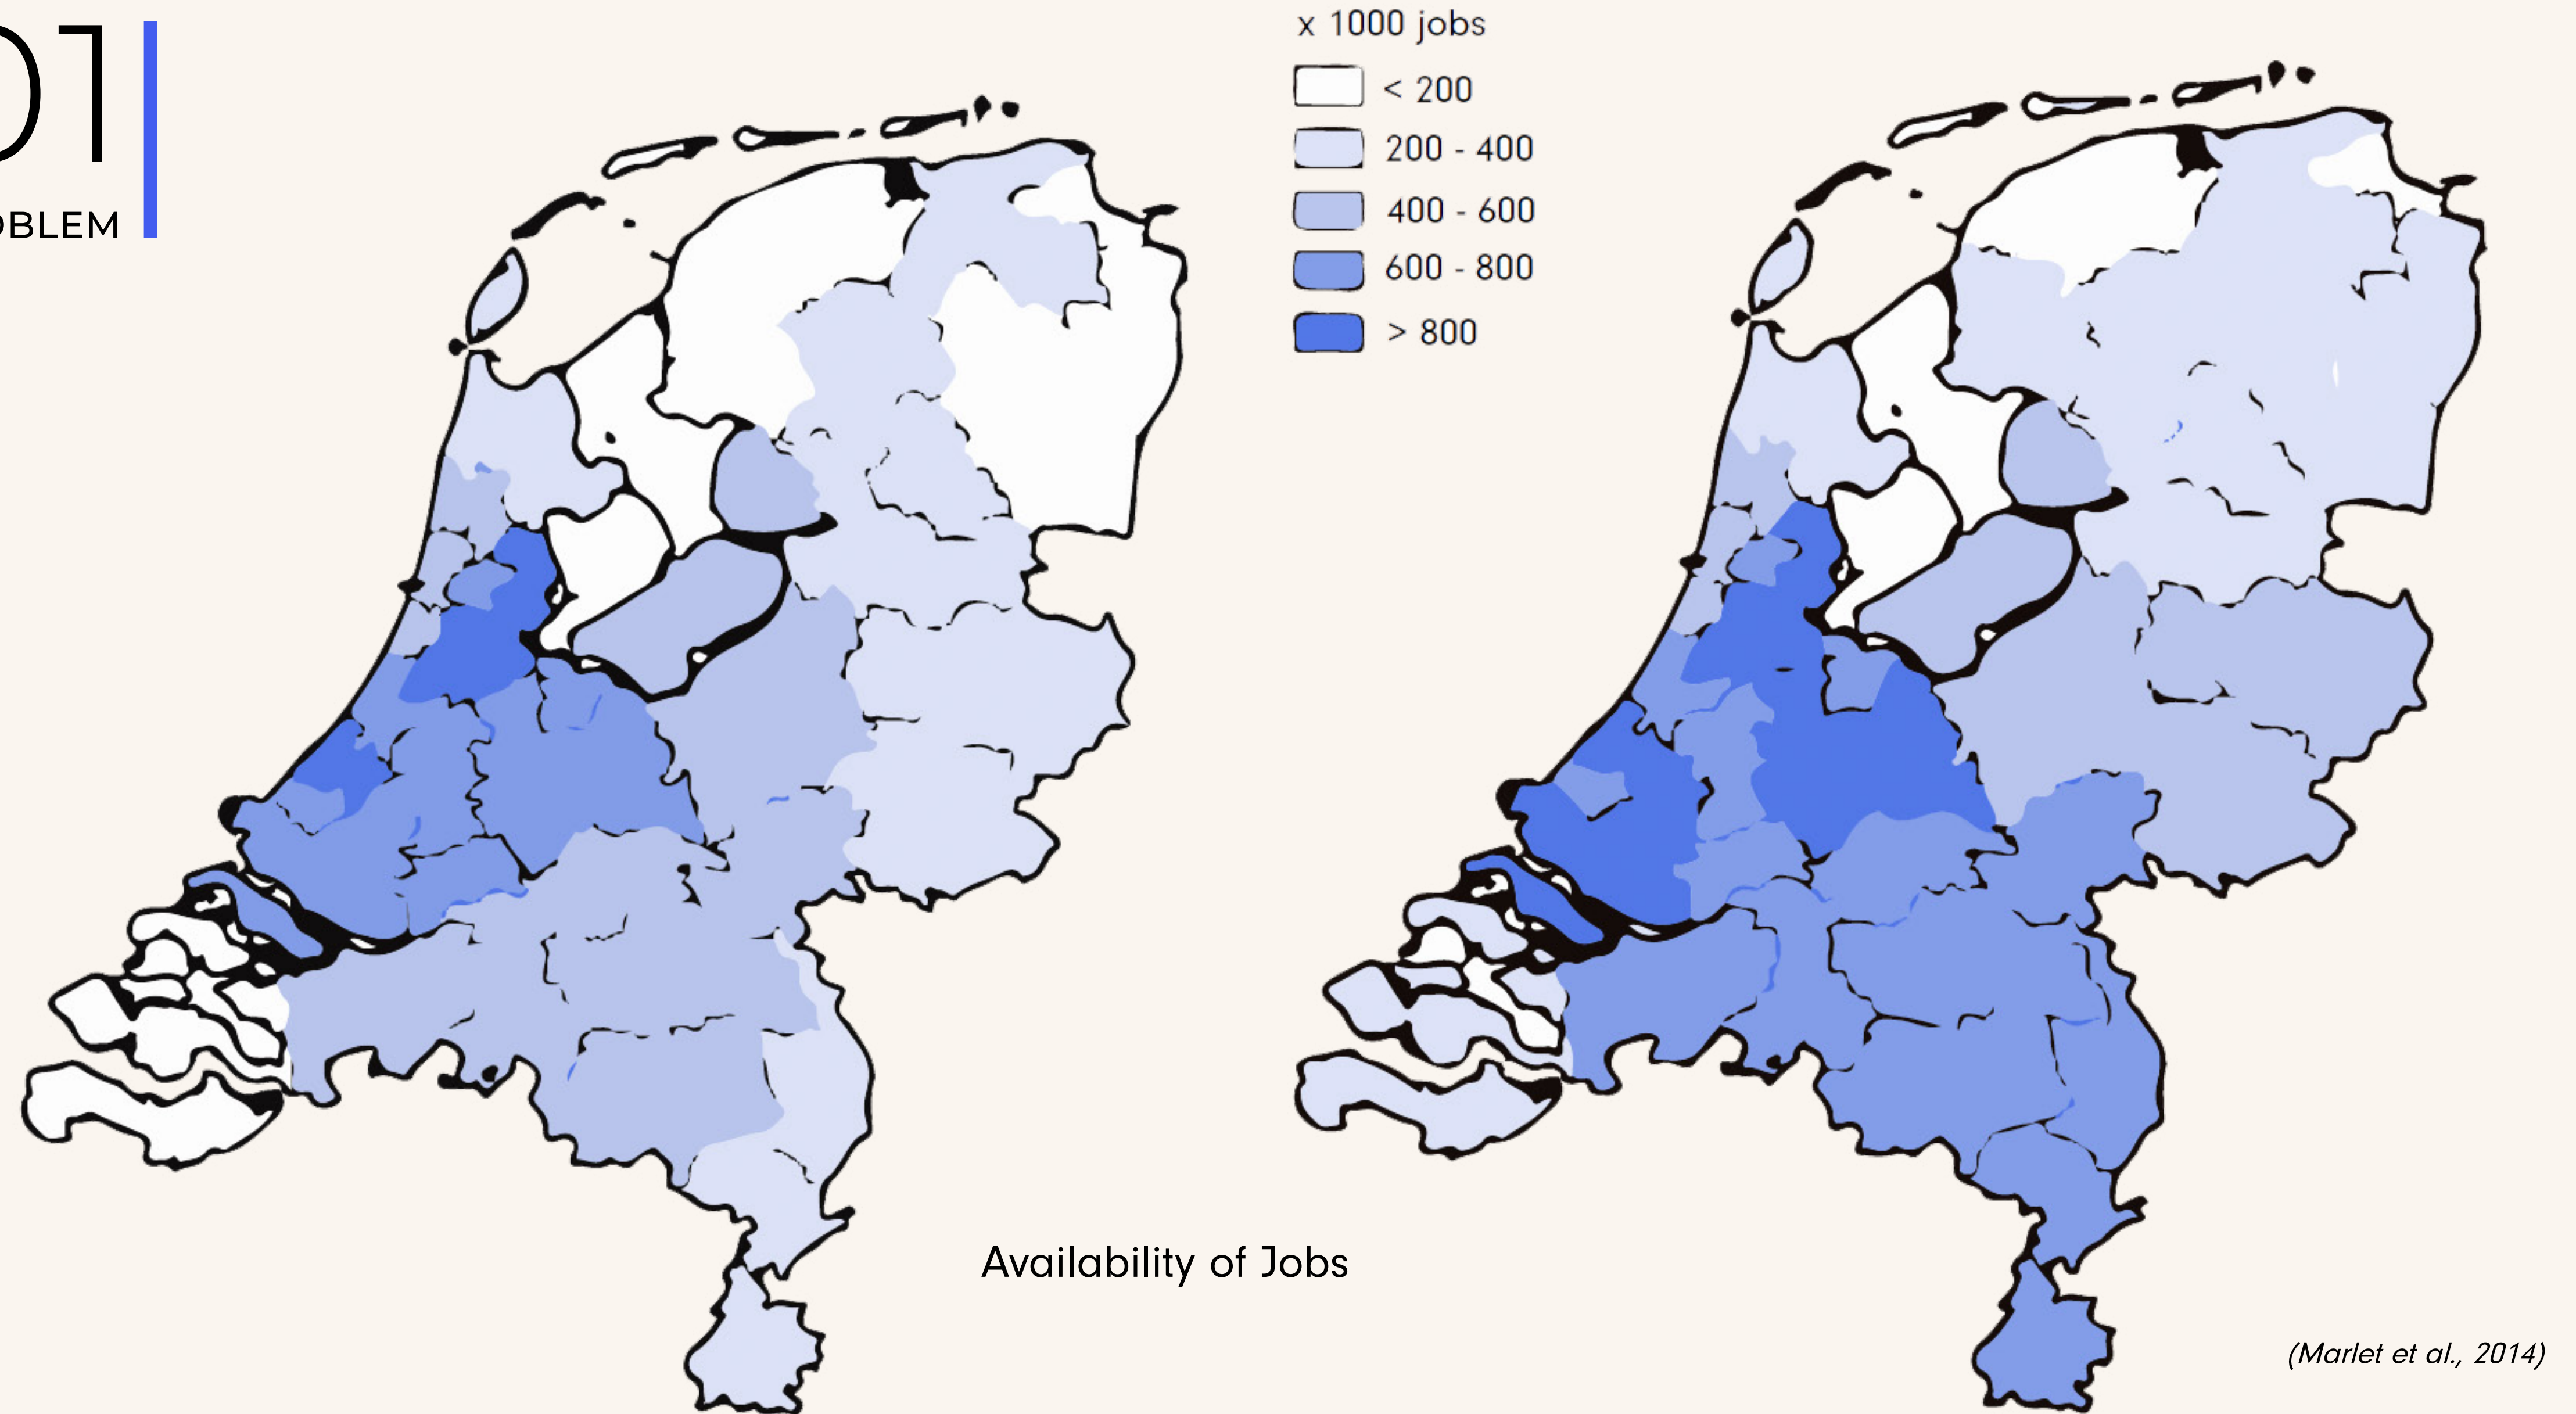

What spatial and policy conditions have to be present to make a just transition towards a new mobility network in a cross-border context?

Sub Research Question 5

What will be the implications of a mobility transition on the spatial and social sustainability in the region?
