El Metro de Bogotá: una obra social, no suntuaria

El ministro de Obras Públicas, Luis Fernando Jaimes, afirmó que el Metro de Bogotá es una obra social y no suntuaria. En un momento de su discurso, el ministro dijo que el Metro de Bogotá es una obra social y no suntuaria. En un momento de su discurso, el ministro dijo que el Metro de Bogotá es una obra social y no suntuaria.

Gobierno insiste en dar apoyo a Metro de Bogotá

La ministra de Obras Públicas, Priscila Ceballos, ratificó la decisión del Gobierno Nacional de apoyar la construcción del sistema de transporte masivo para Bogotá, mediante el aporte de los corredores férreos, los cuales reducirán notoriamente el costo total del proyecto.

El Metro de Bogotá sigue adelante, dice el Alcalde

El proyecto de construcción del sistema de transporte masivo para Bogotá —seguro el alcalde Julio César Sánchez— no será afectado por la política de restricción a las inversiones planteada por el gobierno nacional.

REHABILITATE

Phase 1

By strengthening fast arteries for efficient rapid transit systems in combination with safe paths for bicycle and pedestrian flows, the mobility axes will **reinforce** the **accessibility**, **livability** and **urban quality** along the corridors.

INTEGRATE

Phase 2

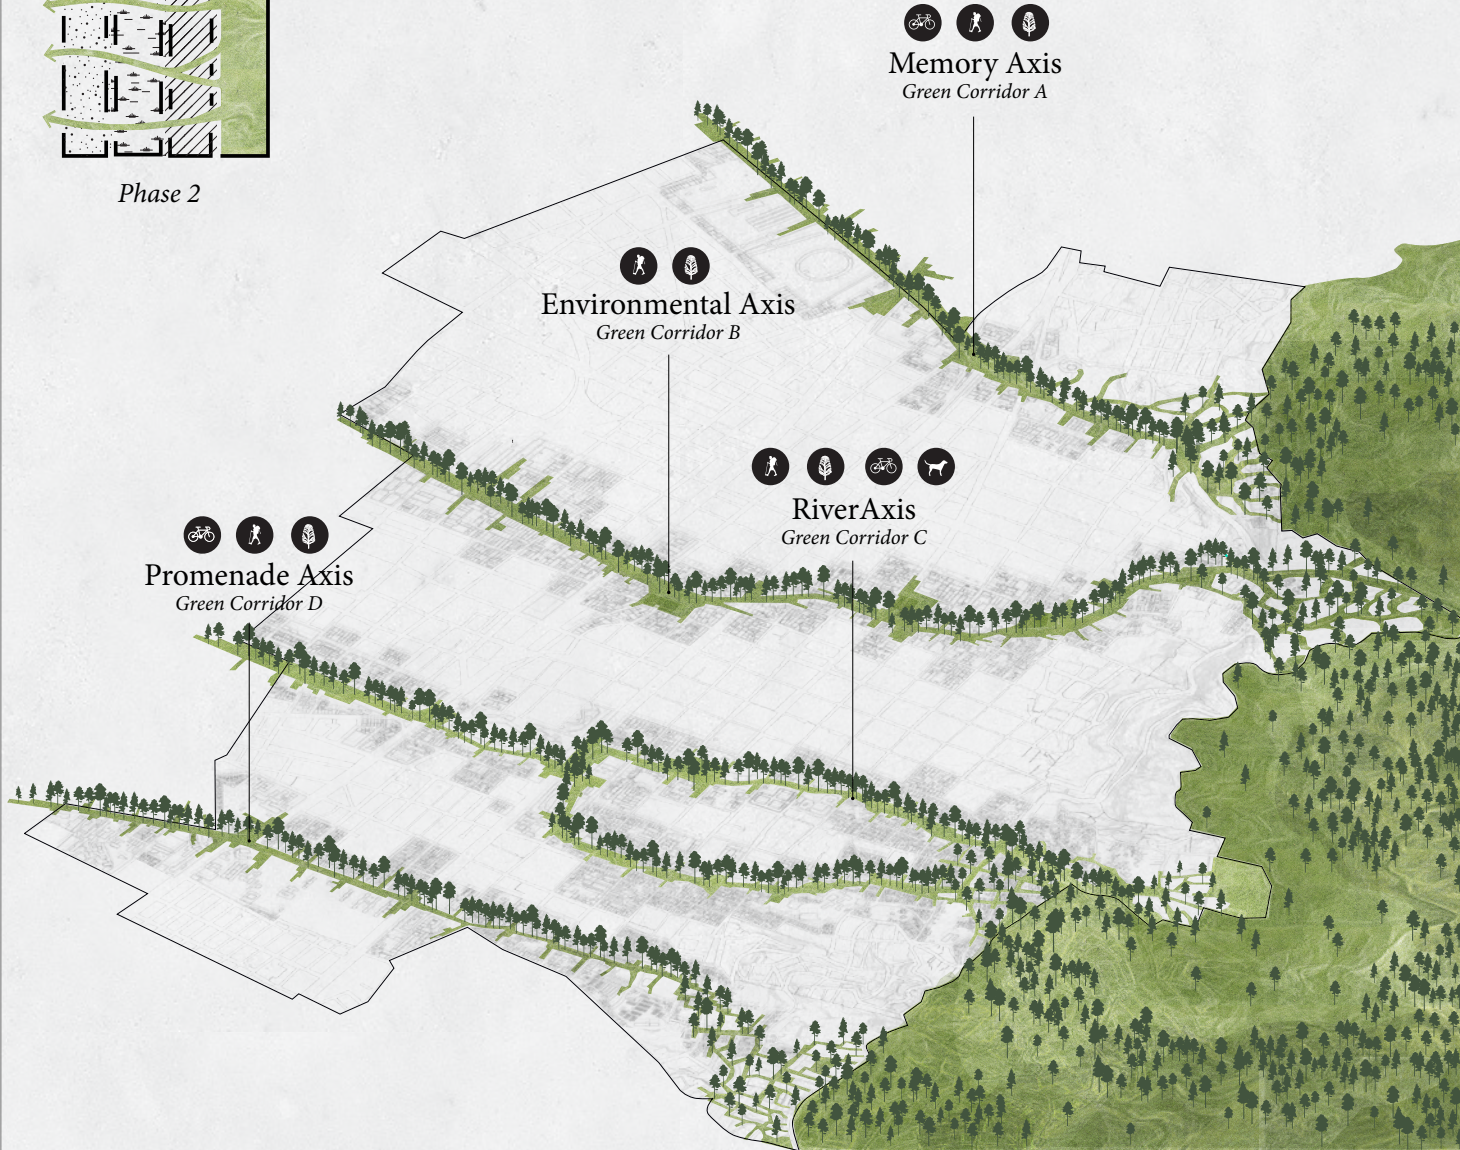

The green corridors along the former highways will become elements able to promote cohesion and order in the territory. They will have the natural ability to preserve the environmental values of the local ecosystems while reinforcing the daily activities in the public space.

CITY CENTER STRATEGIC PLAN

Integrated Regeneration Proposal
Source: Own Elaboration

Actions

01. Introducing a **network of diverse means of transportation** able to respond to the daily system of the diverse set of actors.
02. Enhancing mobility systems that could promote a more **sustainable transportation model**.
03. Promoting an **inclusive and exclusive transit oriented model** that could improve the existing dynamics principally at the local level.
04. **Interweaving the formal and informal sphere**, in order to promote collective functions that recognize the realities of the multiple actor's and their respective role in society.
05. **Consolidating** the urban functions into **strategic clusters**, that could revitalize the value of meaning of the City Center as the most valuable place within the city.
06. **Encouraging residential activities** to make a livelier and more secure city center, principally at nights and on the weekends and on the long term promote a compact, dense and mixed urban model.
07. **Recover the deprived urban and environmental heritage** by introducing new functions such as transport, residential or institutional components.
08. **Empower the plurality and identity of the City Center** and its diverse neighborhoods by empowering the existing positive cultural character and diminishing the undesired ones.
09. **Reoccupying parking lots and private parks** in order to enable a better integration between the green public spaces and the metropolitan ecological structure.
10. **Establish a evolutionary strategic and operative plan** that could cope the goals and values of the heritage, mobility and renovation plans in the Historic City Center.
11. Formulate a flexible **platform that facilitates the interinstitutional relations and community participation** in order to make the City Center's plans and designs feasible, sustainable and easy to be implemented.

Principles

REHABILITATION		Reinforce mobility corridors as epicenters of urban transformation.
		Promote easy access to sustainable mobility systems.
		Recover and adapt elements on abandonment or decay.
ACTIVATION		Establish typologies that promote densification and mixed use.
		Reinforce safe and lively public spaces at multiple levels.
		Establish stations as cohesive and inclusive centralities.
INTEGRATION		Enable functional plurality between the formal and the informal.
		Establish places for gathering together and building community.
		Intertwine tangible and intangible natural and urban assets.
