Building System

Digitally Supported Building System

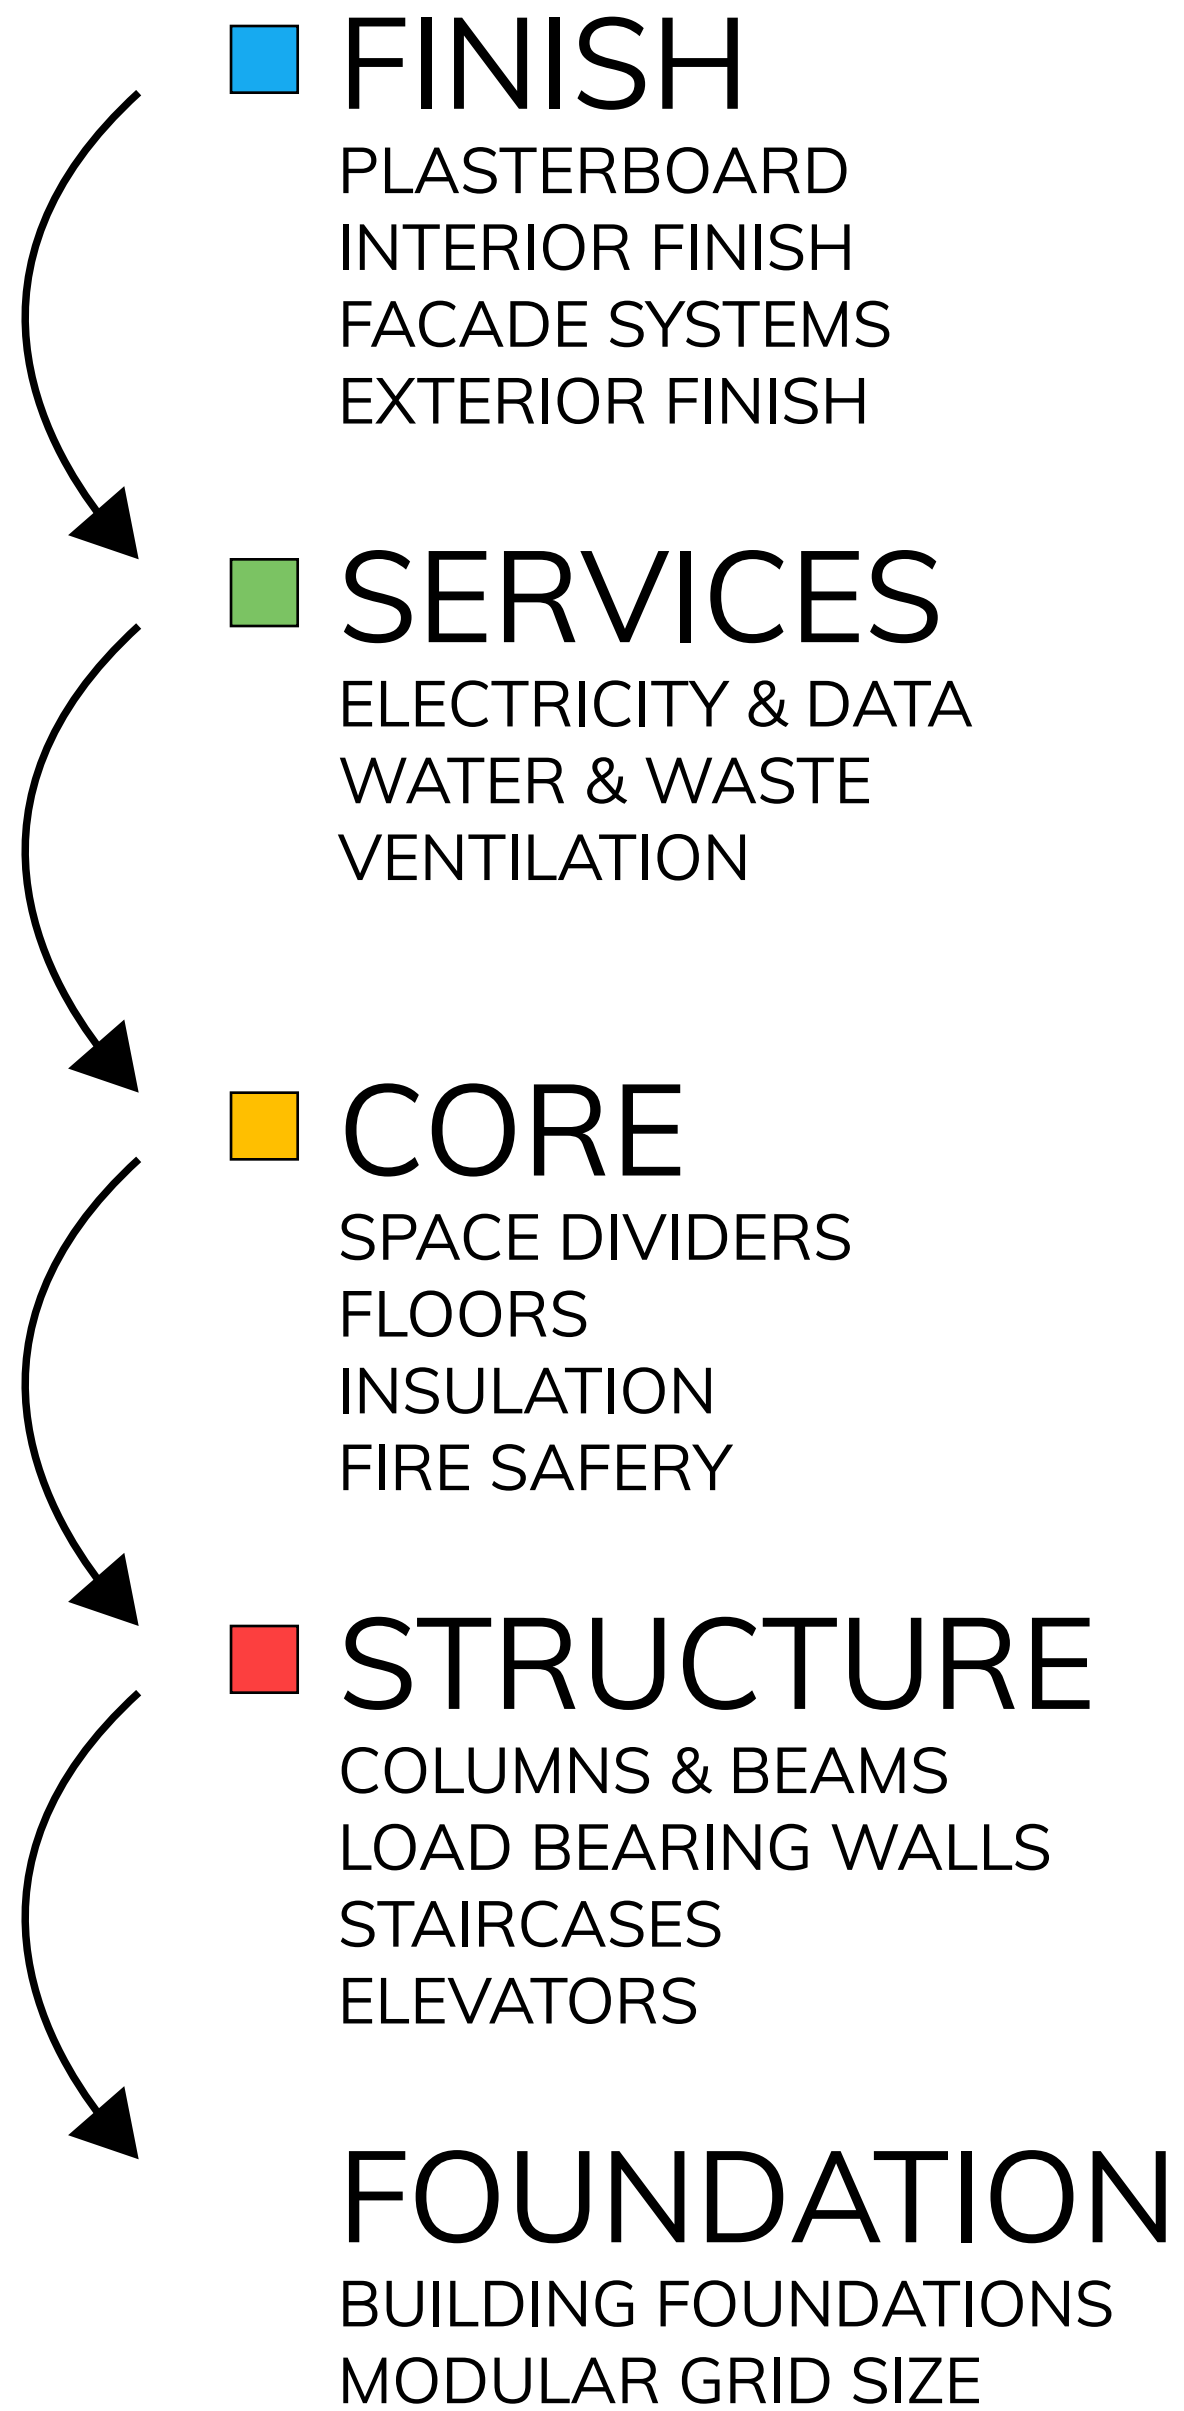

Digitally Supported Building System

- Digital Detailing
- Mass Production
- Flexible
- Circular
- Open Specifications

Shearing layers	Description	Typical lifespan/activity
Site	Location and context	Permanent
Structure	Bones	30-300 years
Skin	Envelope	20+ years
Services	Lifeblood	7-20 years
Space plan	Interior layout	3 years
Stuff	Furniture and equipment	Under 3 years
Souls	People	Daily

Disadvantages

- Critical Mass
- Monopoly
- High Initial Costs

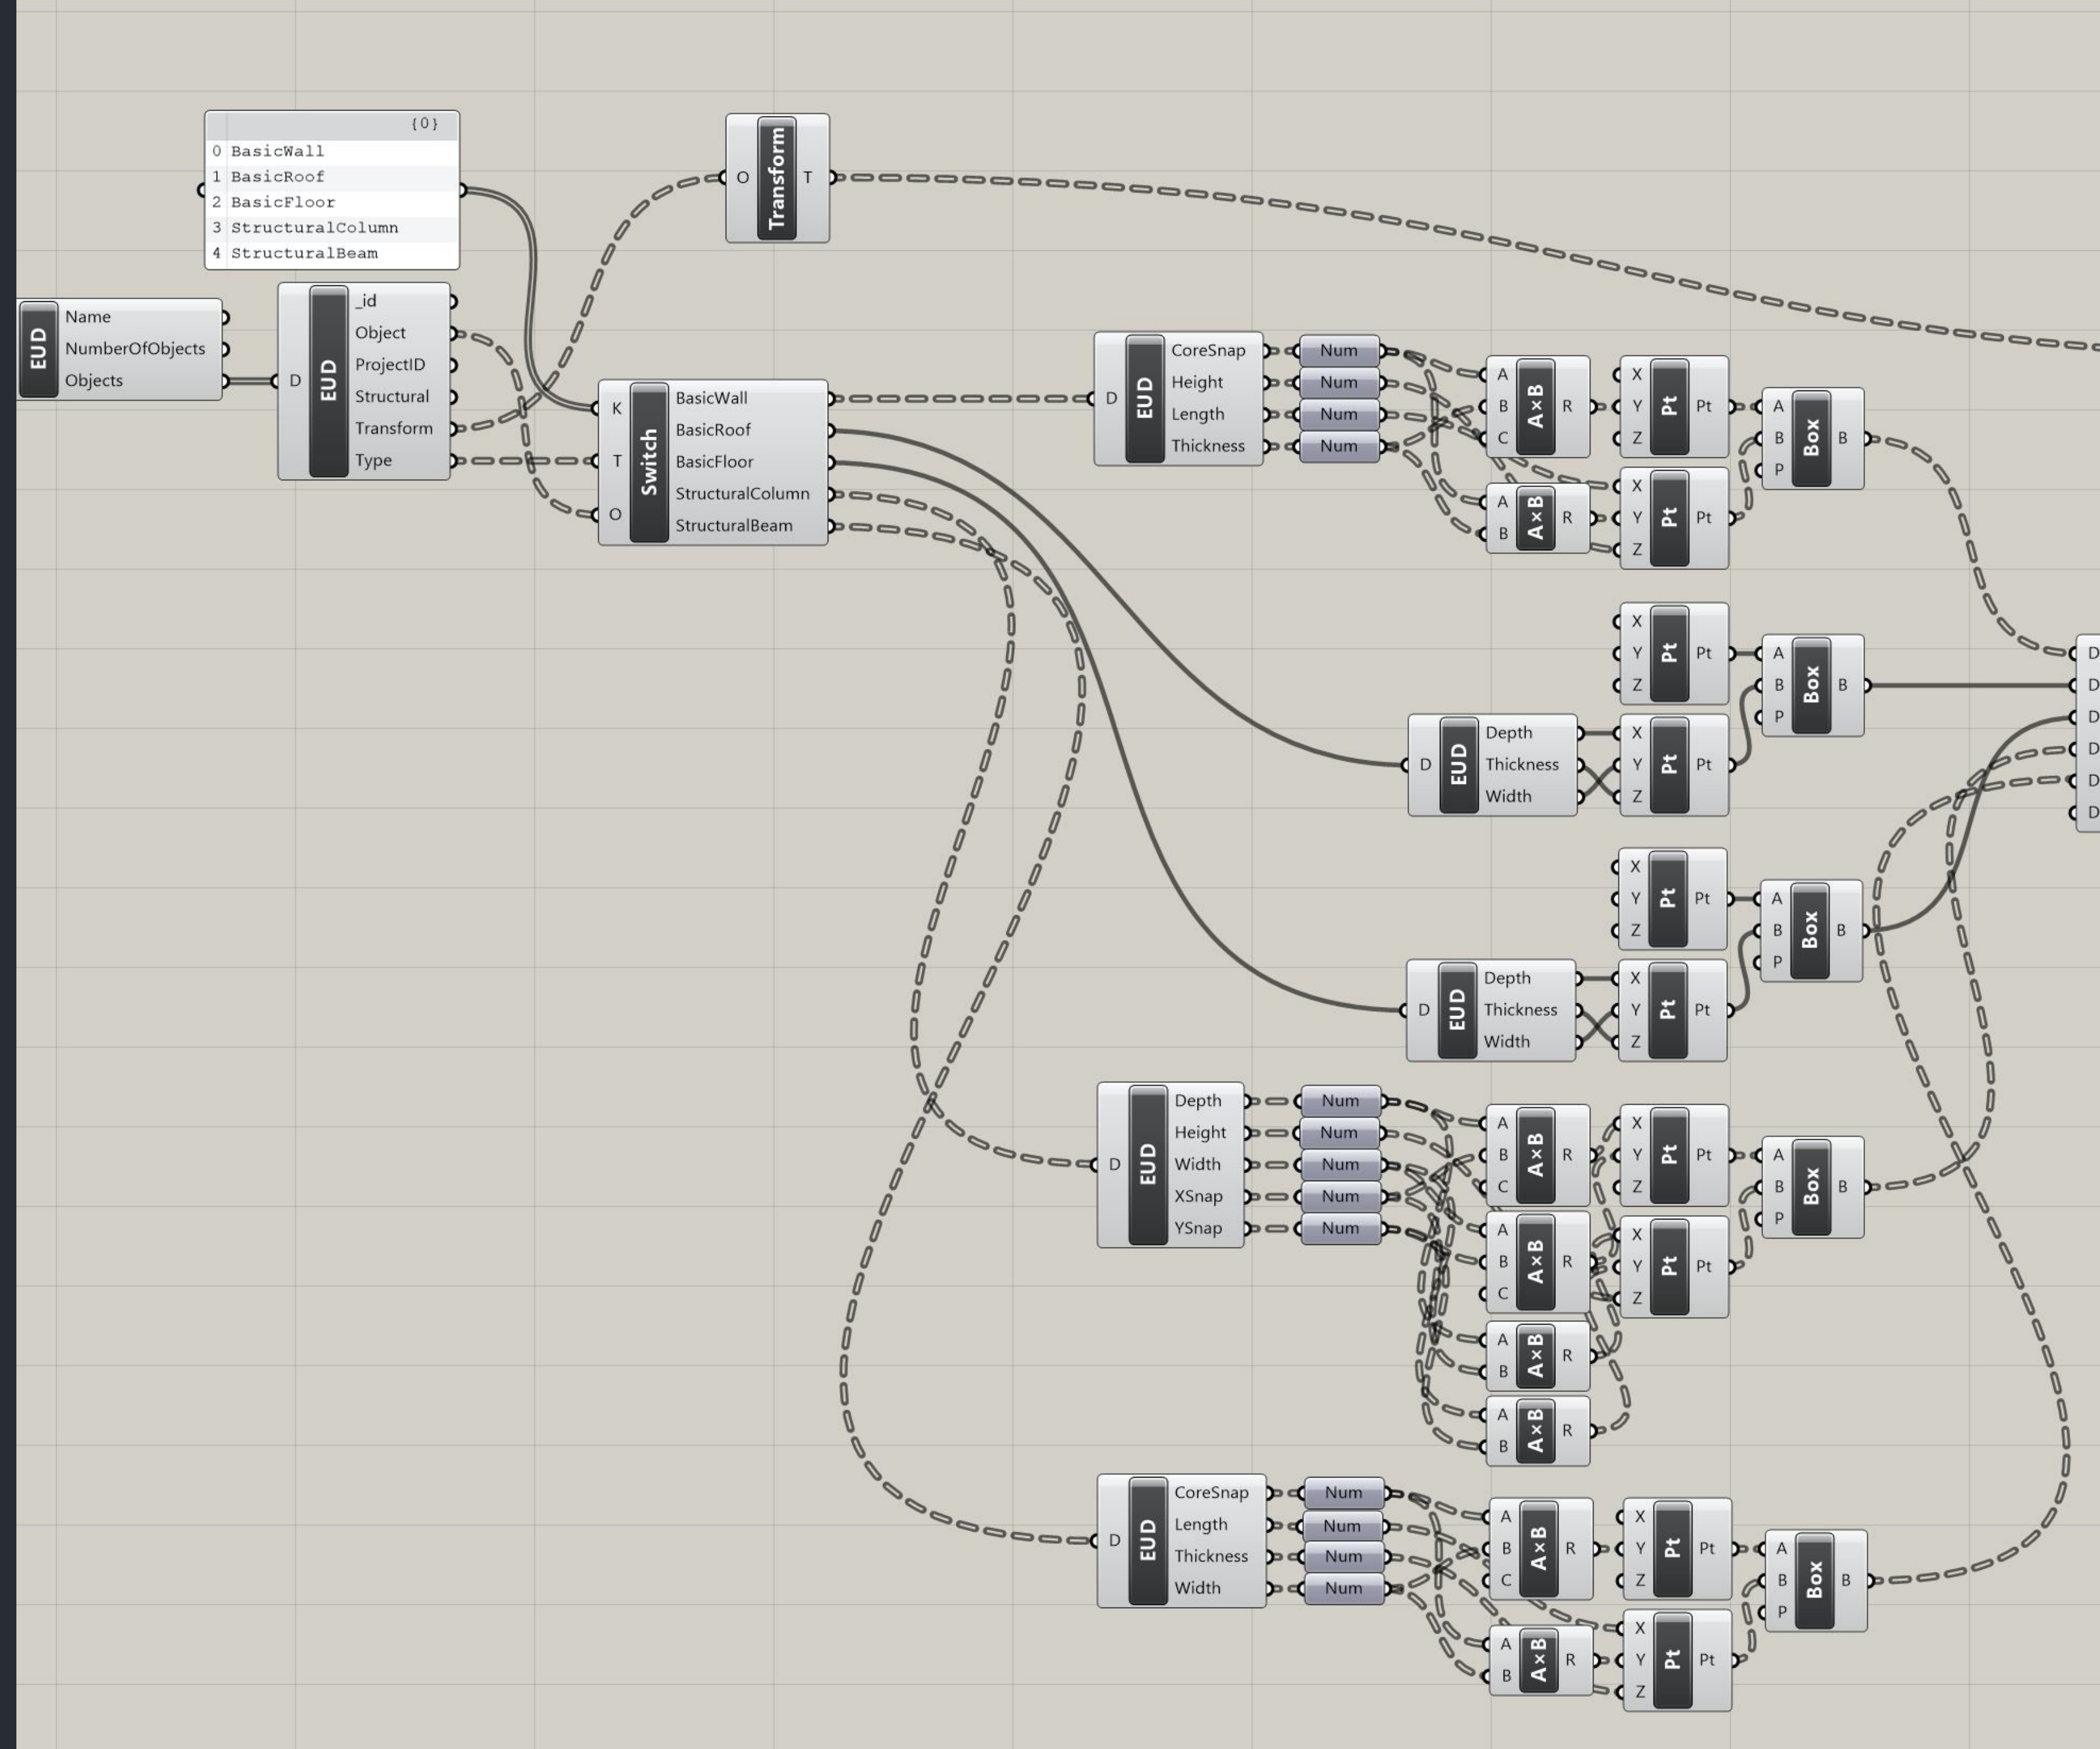

Advantages

- Circular Production and Reduced Waste
- Automated Production
- Scalable
- Reduced Costs
- Customized Living

Co-Design Process

**As proposed
by the project
sponsor.**

**As specified
in the project
request.**

**As designed
by the senior
architect.**

**As produced
by the
engineers.**

**As installed at
the user's
site.**

**What the
customer
really wanted.**

Co-design process

- Phase 1: Raw Design Brief
- Phase 2: Design Brief and Frame of References
- Phase 3: Concept and Building Design
- Phase 4: Residence Design and Detailing
- Phase 5: Evaluation

Findings

General Impression

- Participants were satisfied with the results
- Participants felt involved in the process
- More co-design sessions preferred
- More feedback loops

VR as a Visual Language

- VR is a crucial tool in the co-design process
- Easier to understand than conventional tools
- Difference between VR and 3D on screen
- No need to be dynamic

Shared Frame of References

- Approach was successful
- Improved insight in 'unspoken' wishes and requirements
- Improved critical dialogue
- Supported further phases
- Helped me as a designer

Tensions and Priorities

- No important tensions experienced by participants
- Miscommunications were quickly resolved
- Tensions did not escalate to conflicts

Multiplayer VR

- Greatly improves communication
- Non-verbal communication is possible
- Essential part of VR for co-design

Role of Architect and User

- Clear distinction between architect and users
- Distinction is preferred by participants
- Changed setup could improve participant involvement in architectural themes

Discussion

- Simulation and Budget
- Number of Participants
- Education Setting
- Impact
- Further Research

Case Study

Plot:

Size:	320m ²
Width:	2x6m
Depth:	26.8m
Front Elevation:	1.95+NAP
Back Elevation:	1.41+NAP

Maximum Building Size:

Height:	16m
Depth:	14m
Width	6m
Basement:	3m

Minimum Building Size:

Height:	9.4m
Depth:	11m
Width	6m
Basement:	3m

Garden:

Depth:	11.6m
Patio Height:	3m

Street Access:

2 Parking Spots at the Back
Bike Parking at the Front
Home Office at the Front
