A sustainable future start with students

PROBLEM: STRESS WITH STUDENTS

78% thinks performance pressure too high

60% experience stress on a weekly base

46% sometimes stays home because of stress

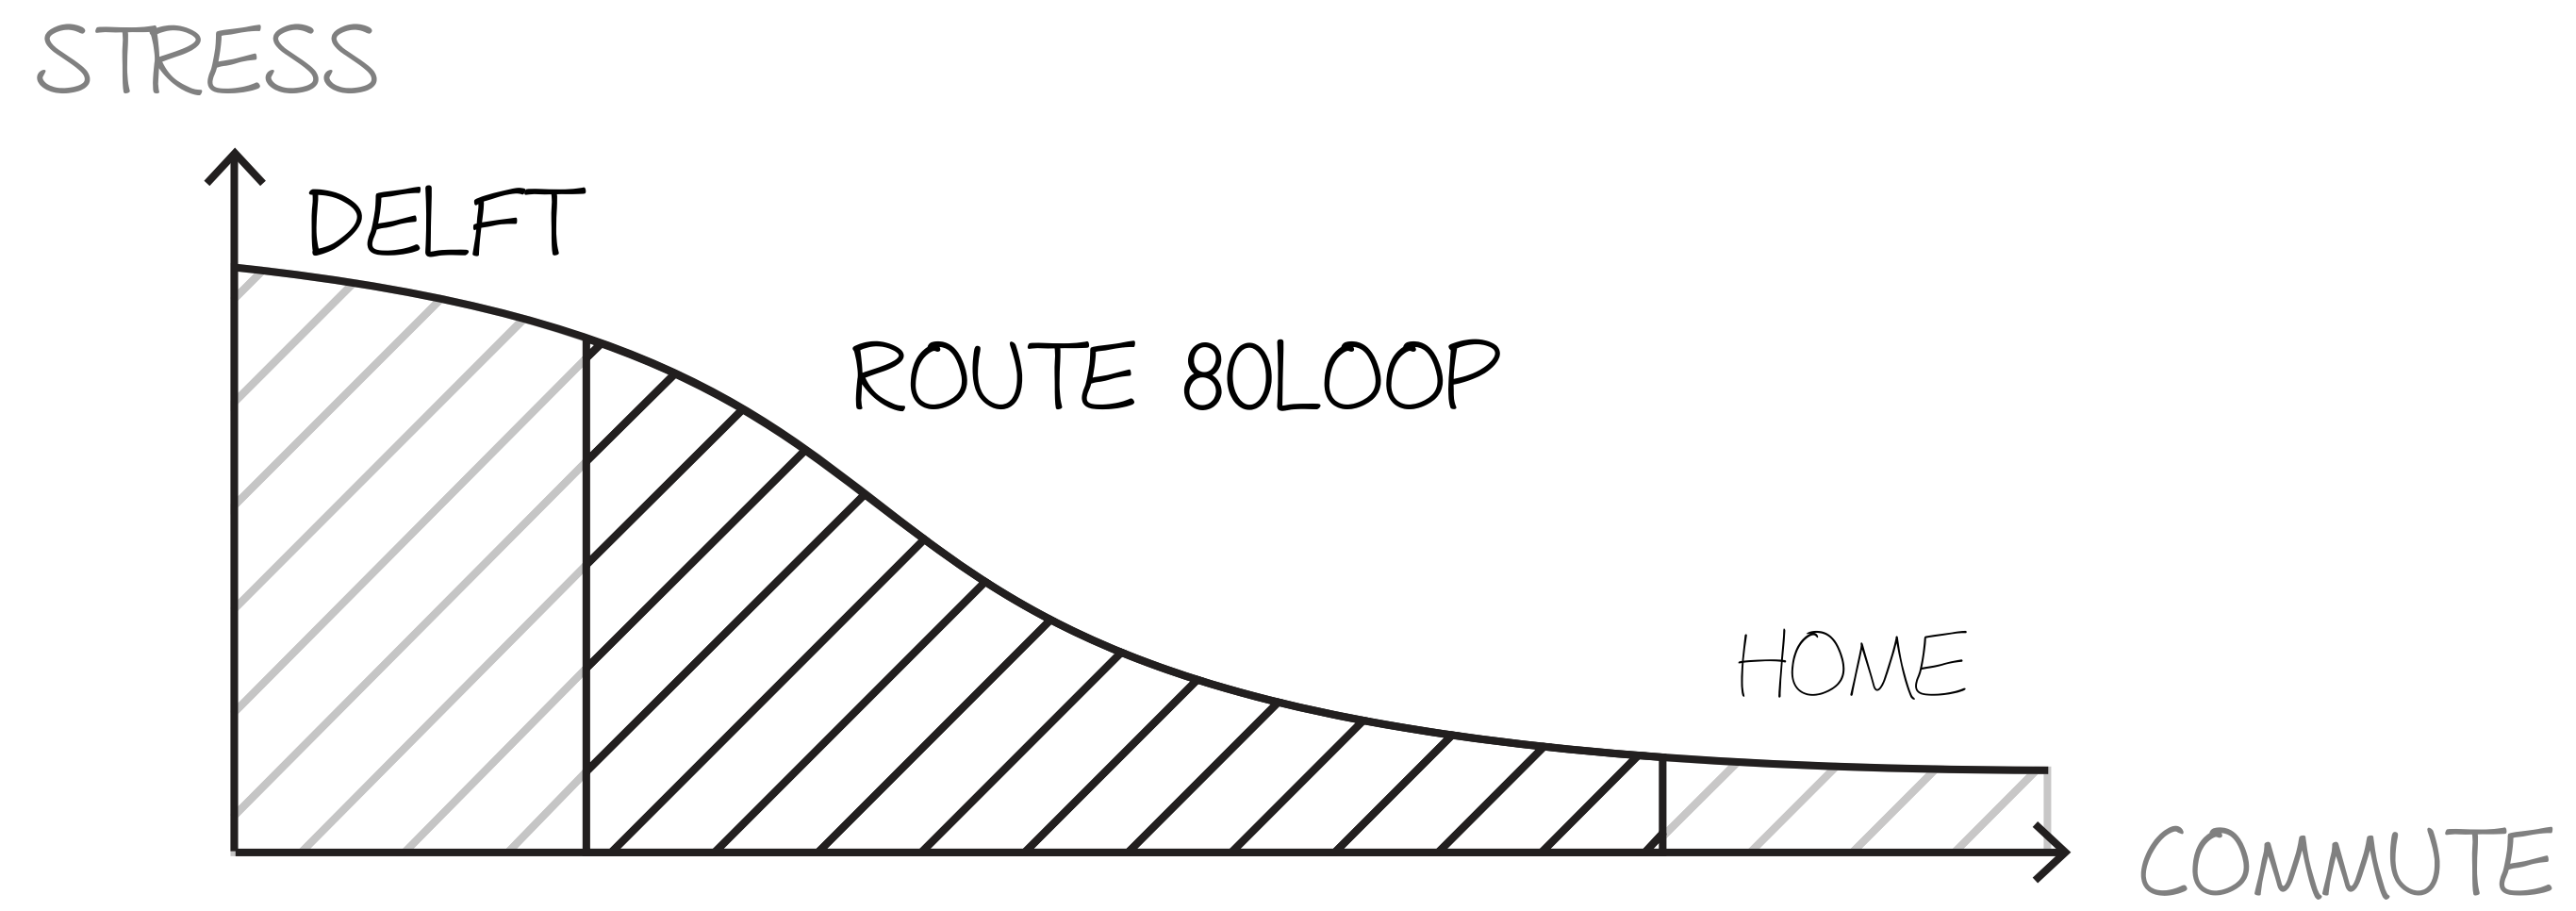

40% has psychological complains

35% are afraid for burnouts

How can we solve this architecturally?

- Space for social activities
- Interaction with nature
- Peaceful surrounding for work live and meet
- Spaces isolated from chaos

Concept: a route that calms the mind

STRESS

CHARACTERISTICS LOOP

- Abstract
- Concrete
- Curved
- Ongoing
- Open and accesable
- Heavy
- Permament

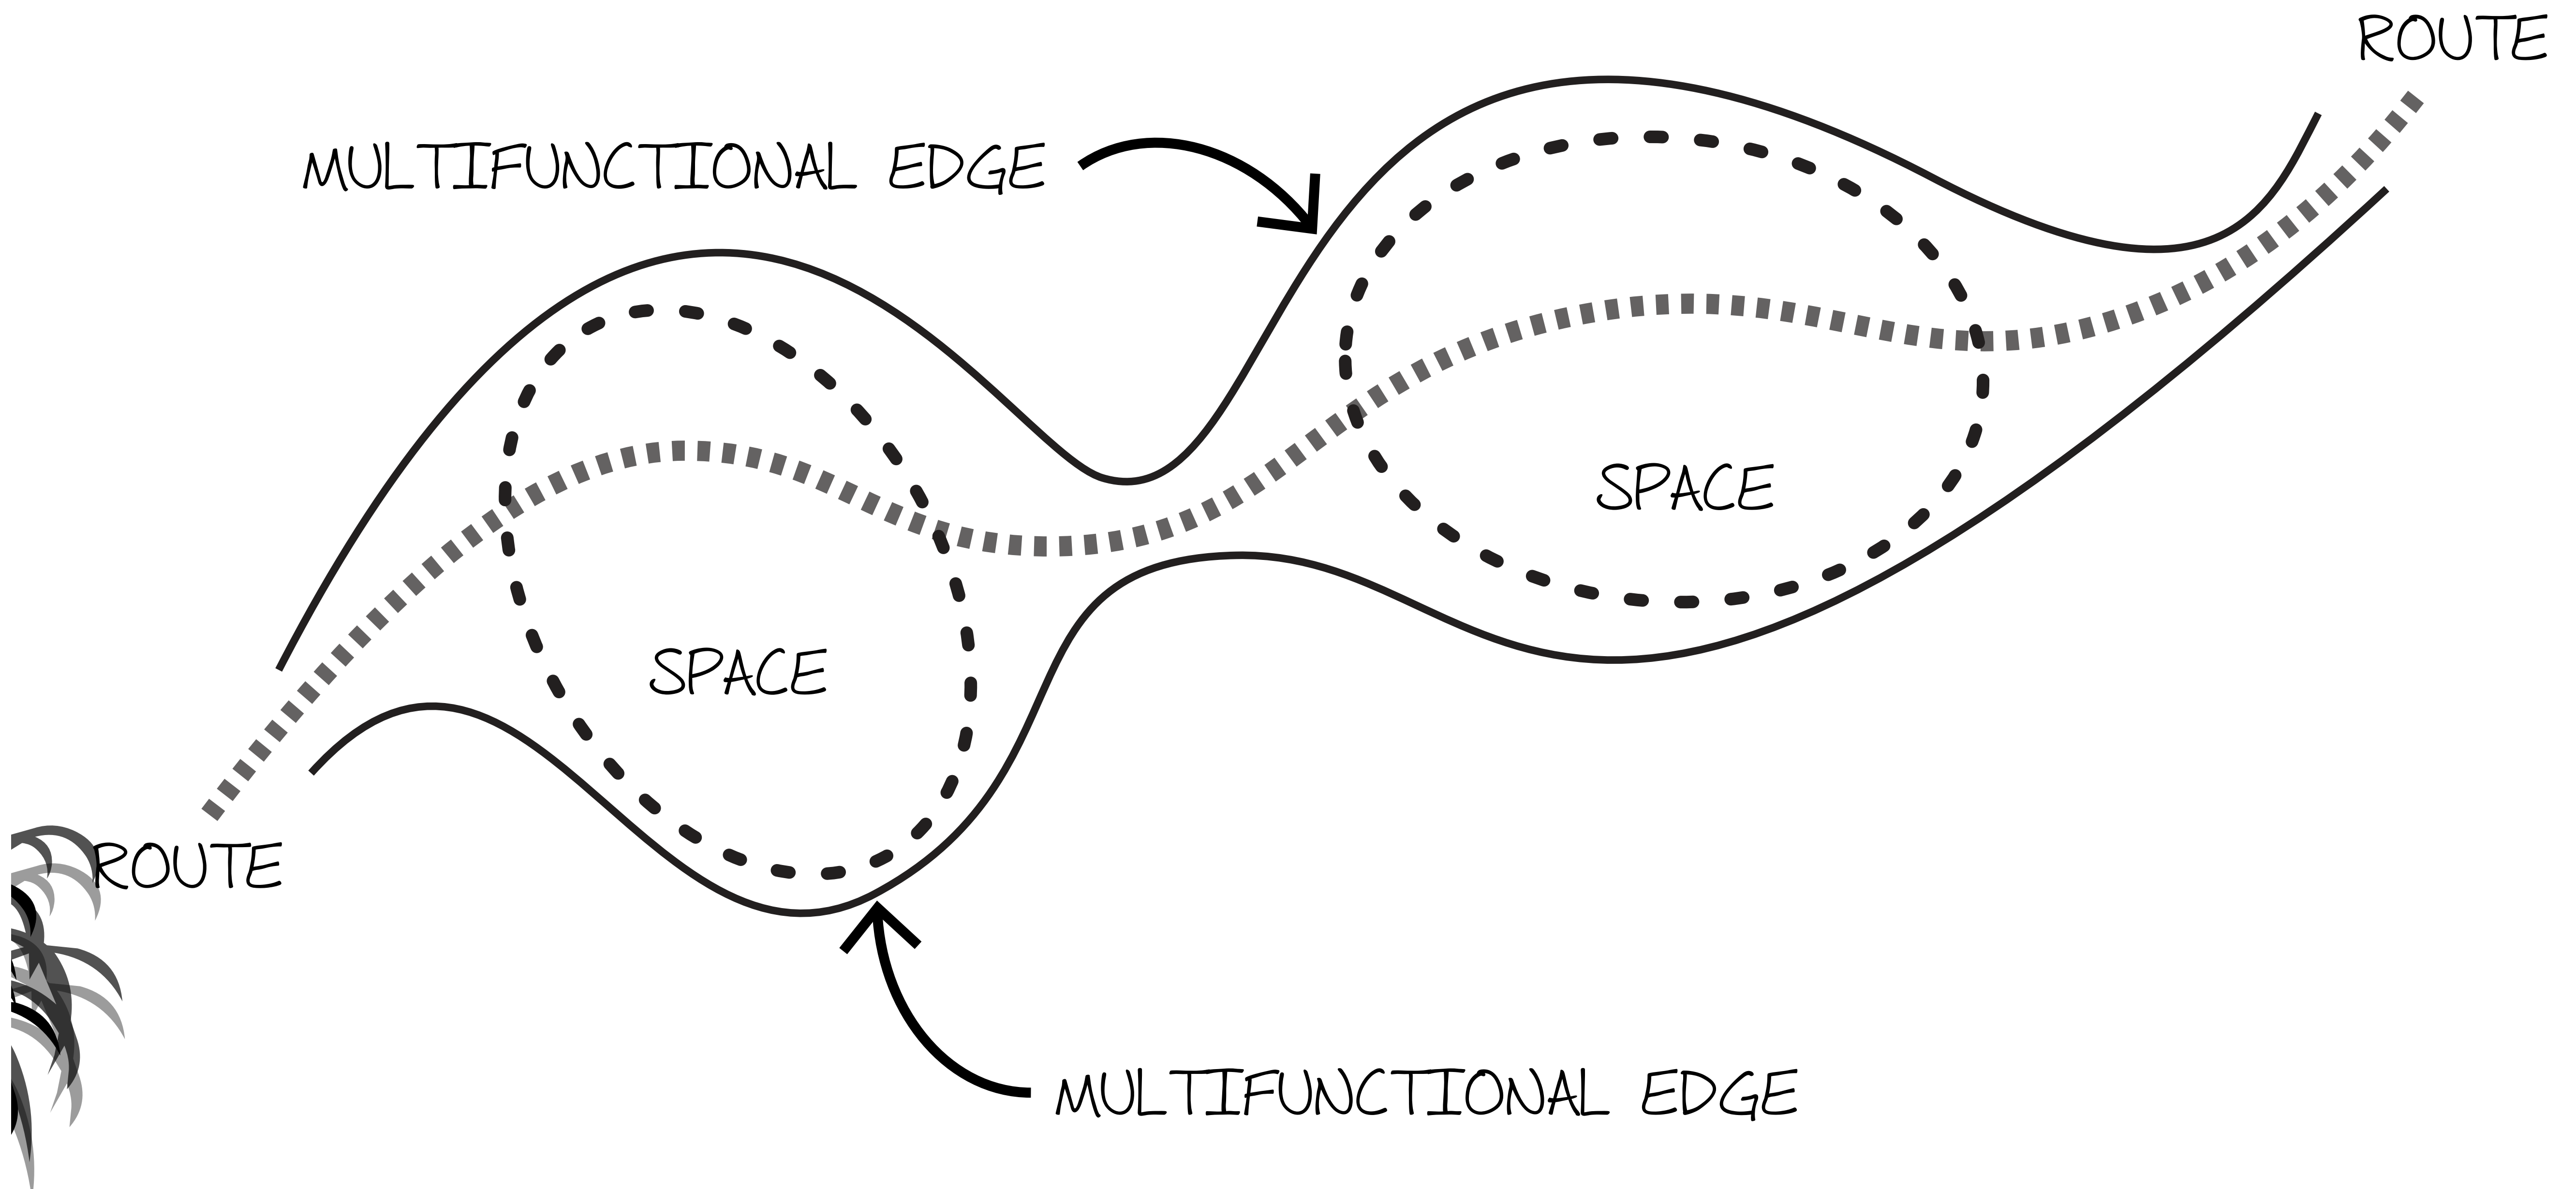

CHARACTERISTICS HOME

- Warm
- Wood
- Orthogonal
- Stopping
- Enclosed & efficient
- Light
- Adjustable

Functions and spaces are added to the route to make it more functional

Nature works as fall prevention

A: Bench

height 600<900mm
sitheight 400<500mm
sitdepth <500mm
length 3000<7000mm

B: Route

width >1200mm

C: Fall prevention

height 200<600mm
width >800mm

Nature for enclosure of the space

A: Shelter

height 1600<2400mm
sitdepth 400<1200mm
sitheight 300<500mm
length 3000<5000mm

B: Space

width 3200>mm

C: Bench

height 600<900mm
sitheight 400<500mm
sitdepth <500mm
length 3000<7000mm

Nature for healthy mind

A: Bench

height 600<900mm
sitheight 400<500mm
sitdepth <500mm
length 3000<7000mm

B: Route

route width >1200mm

C: Table

height 700mm
width 800<1200mm
Benchheight 400<500mm
length 2000<3500mm

Nature guides people & helps to orientate

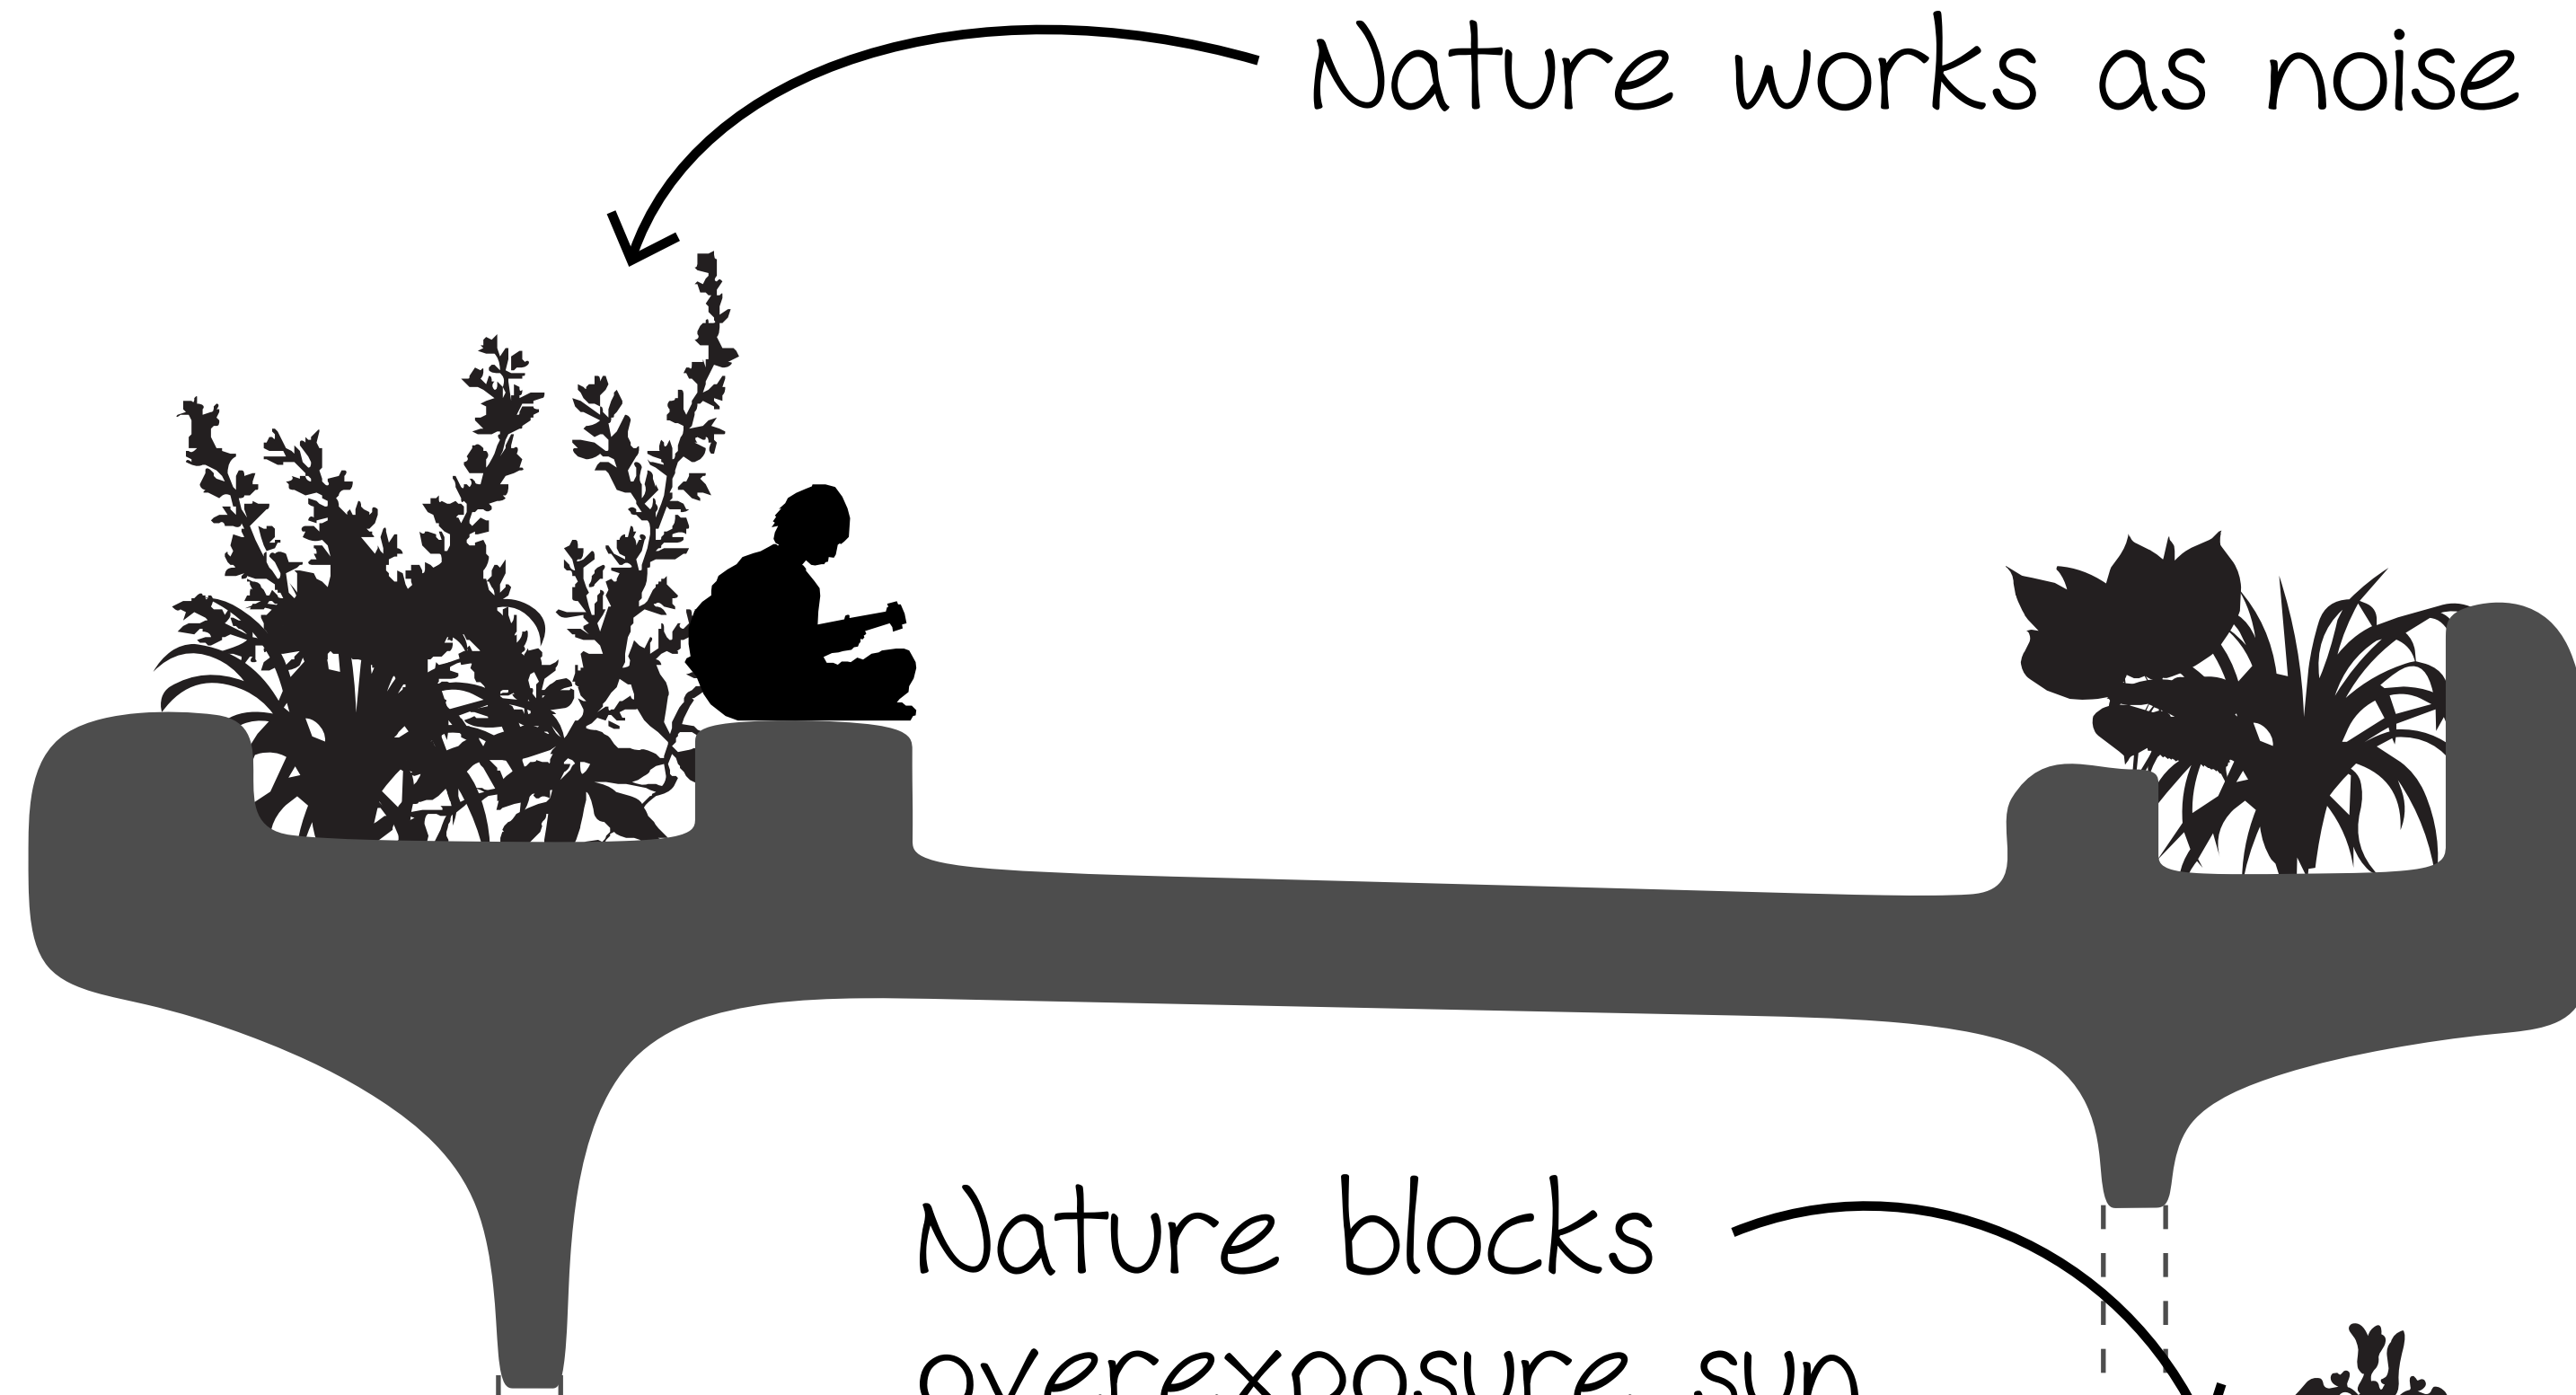

A: Gate support

B: Entrance

C: Gate support

width 2400<4200mm
height 2600<3200mm

Nature works as noise reduction

Nature blocks overexposure sun

A: Fall prevention

B: Route

C: Dwelling

height 200<600mm
width >800mm

width 1200>

size 36>48m²
width 7000>9000mm
height 4000<6000mm

Nature for enclosure of the space

A: Gallery/(Food)Bar

height 2600<3200mm
depth 800<3200mm
length 3000<8000mm

B: Space

width 3200>mm

C: Bench

height 600<900mm
sitheight 400<500mm
sitdepth <500mm
length 3000<7000mm

loads of ceiling

top edge dwelling

support walls

Ceiling is shapes according to the load of forces. The top edge of the dwelling will continue transferring it to the structural walls.

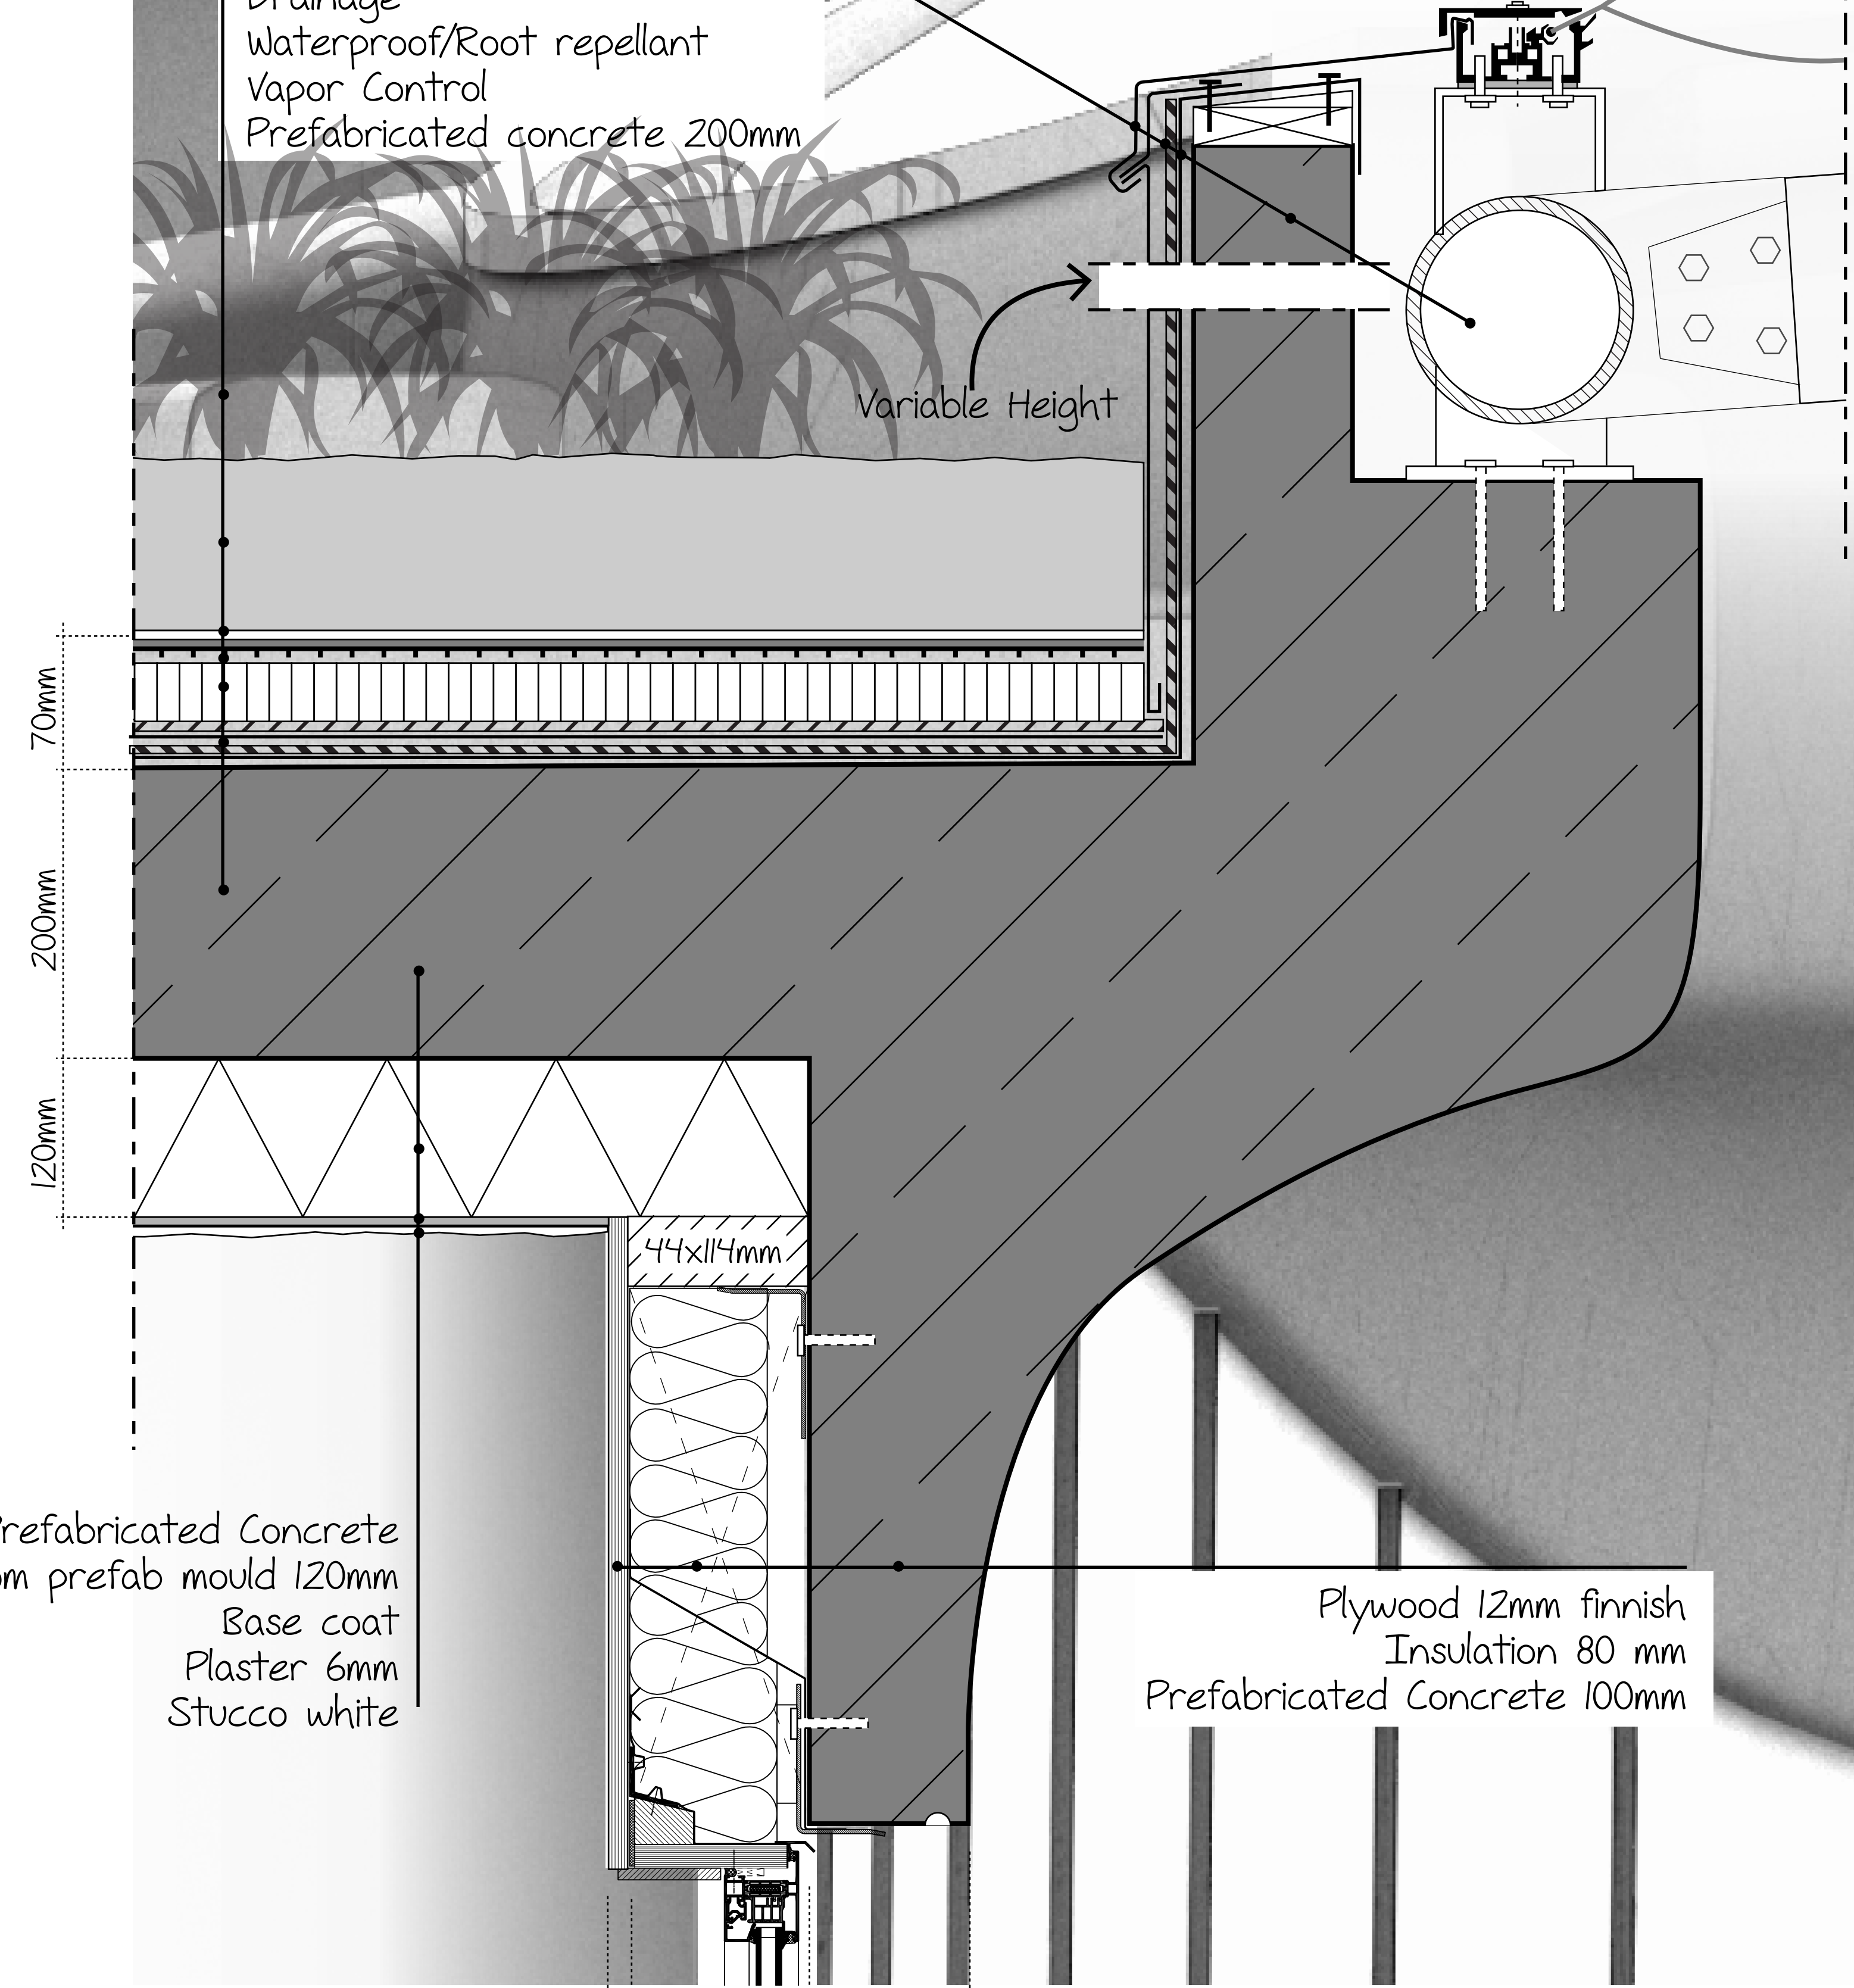

All dwelling will have an cold and warm side. Solar radiation heats the space underneath ETFE. By controlling the air outlet, the dwellings will be ventilated, cooled and warmed in summer and winter.

ETFE Roof with controlled air outlet

Vegetation
 Growing medium
 Filter membrane
 Drainage
 Waterproof/Root repellent
 Vapor Control
 Prefabricated concrete 200mm

Sheet Metal parapet cap drain to roof side
 Protection course
 Sheet Metal protection
 Prefabricated concrete 100mm
 Roof support beam 150mm diameter

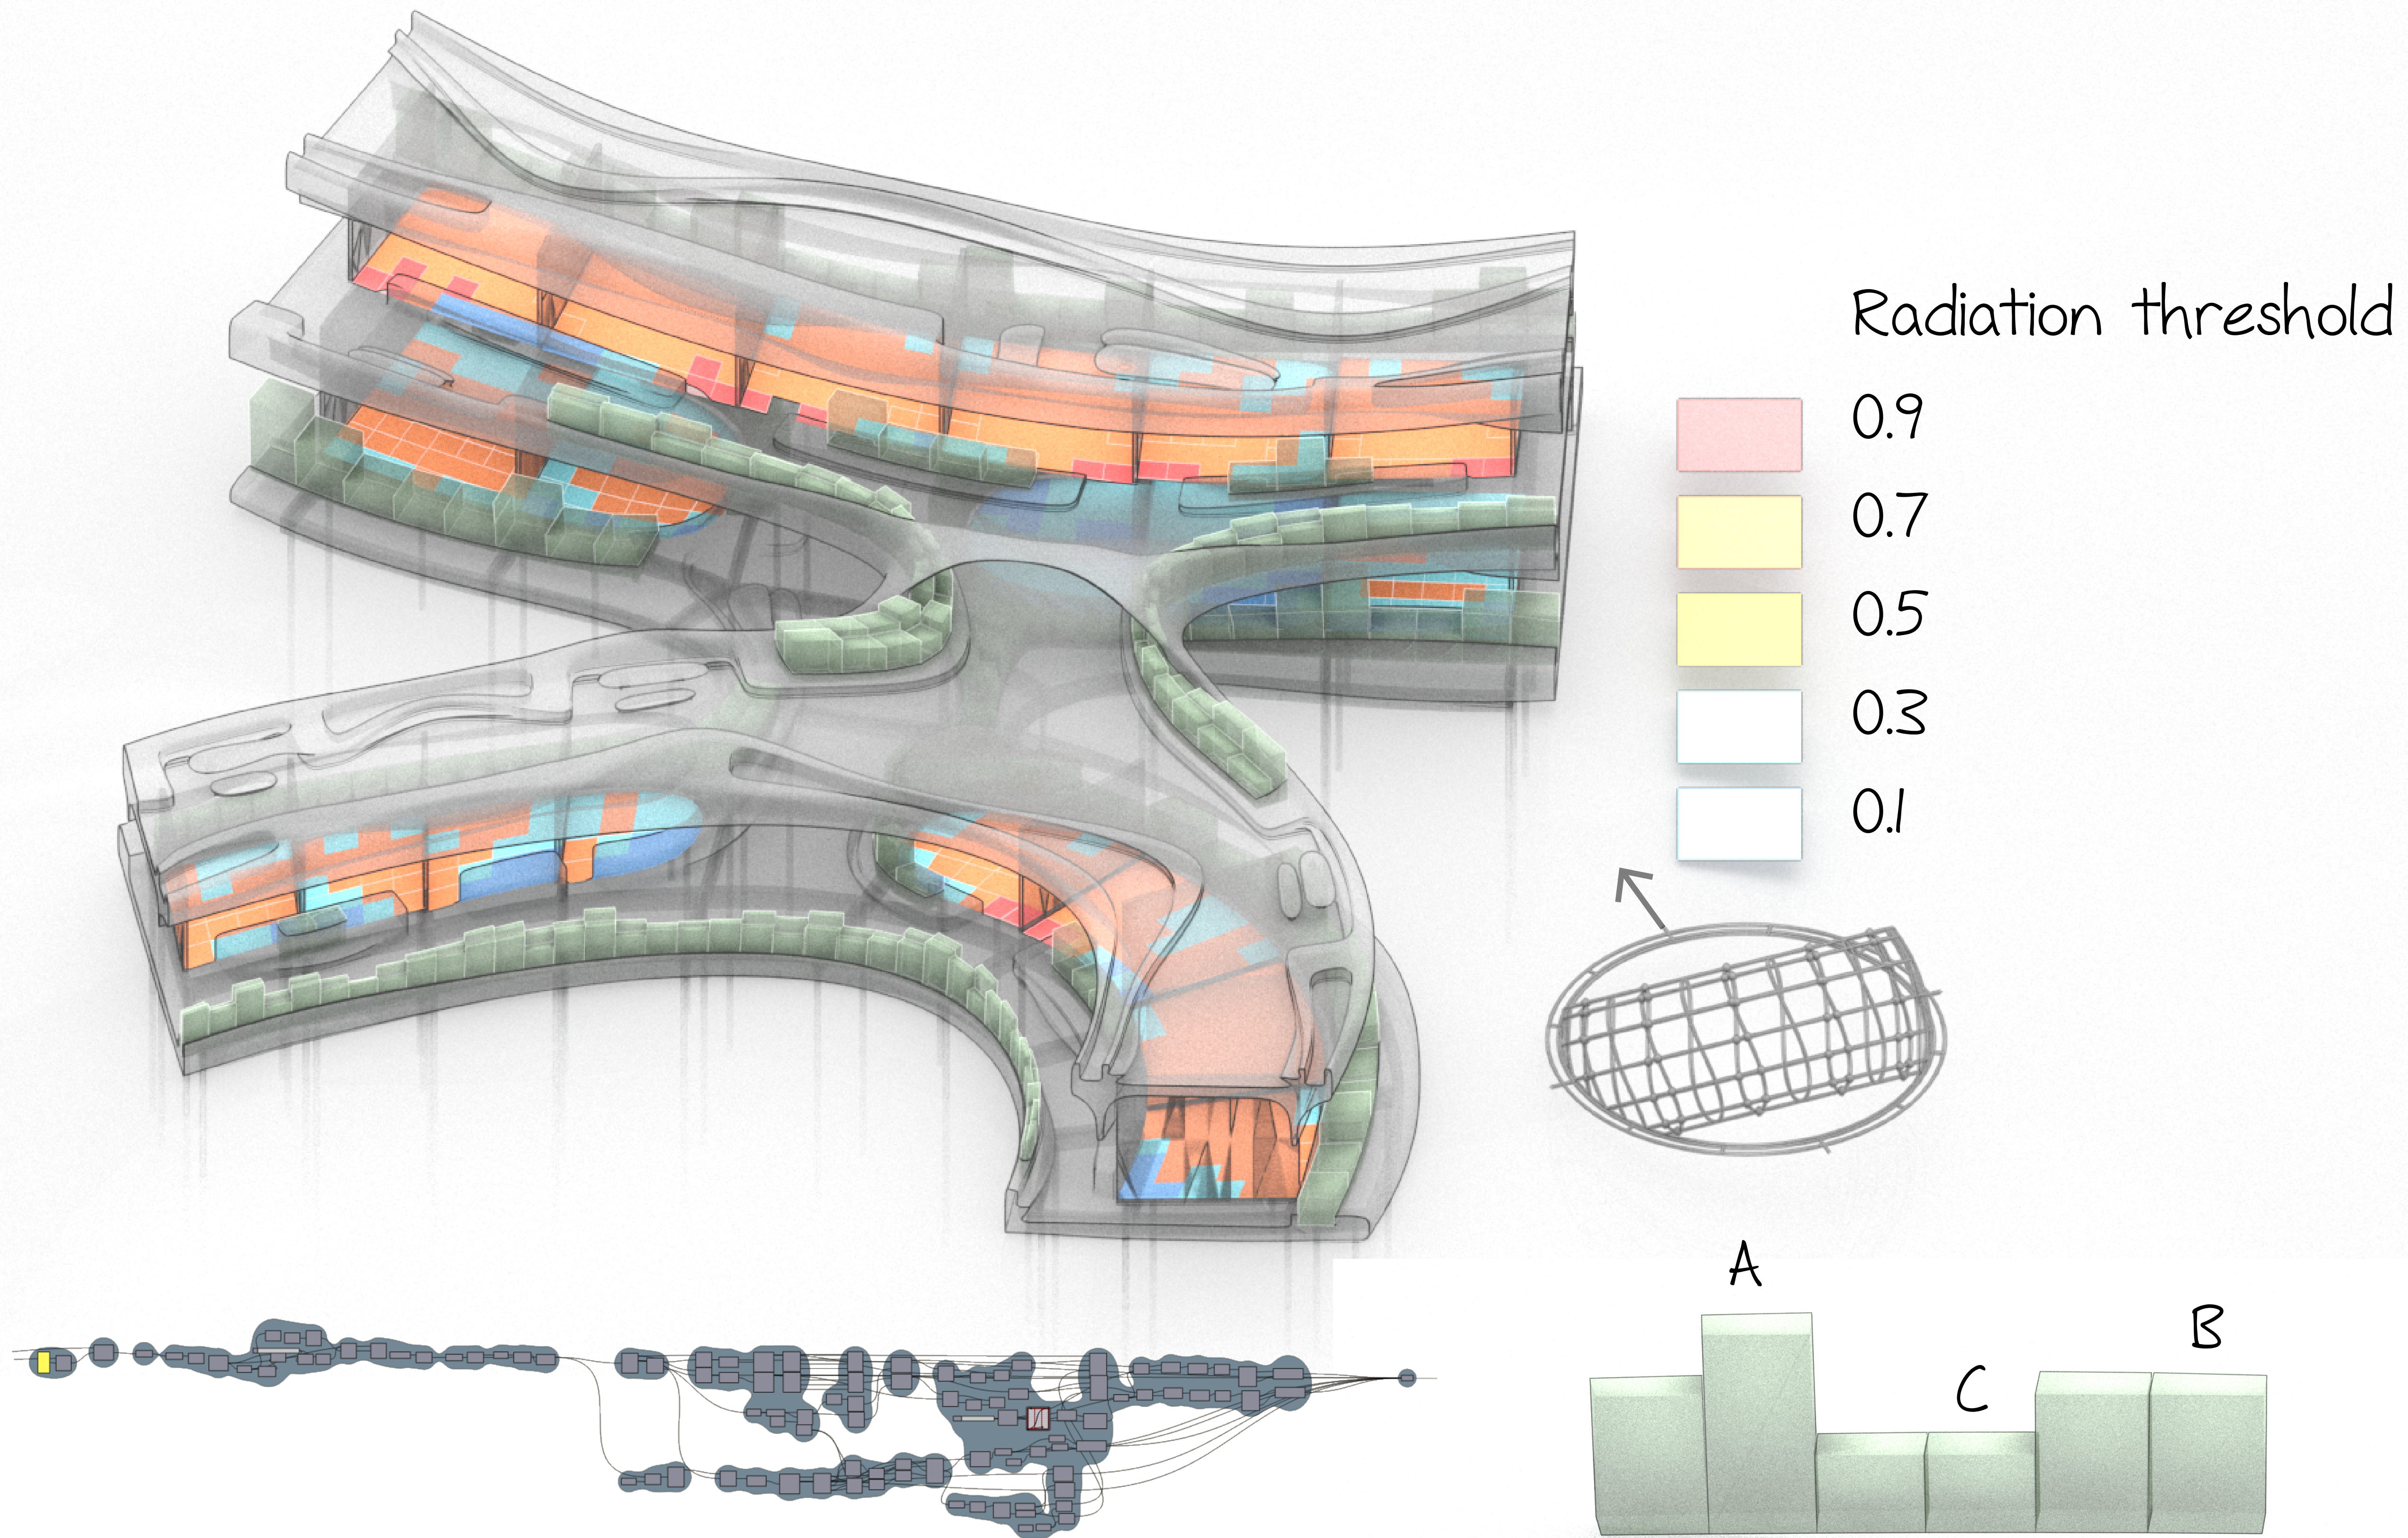

ETFE profile
 Actuator to lift ETFE panel
 Stainless steel support profiles

Prefabricated Concrete
 EPS from prefab mould 120mm
 Base coat
 Plaster 6mm
 Stucco white

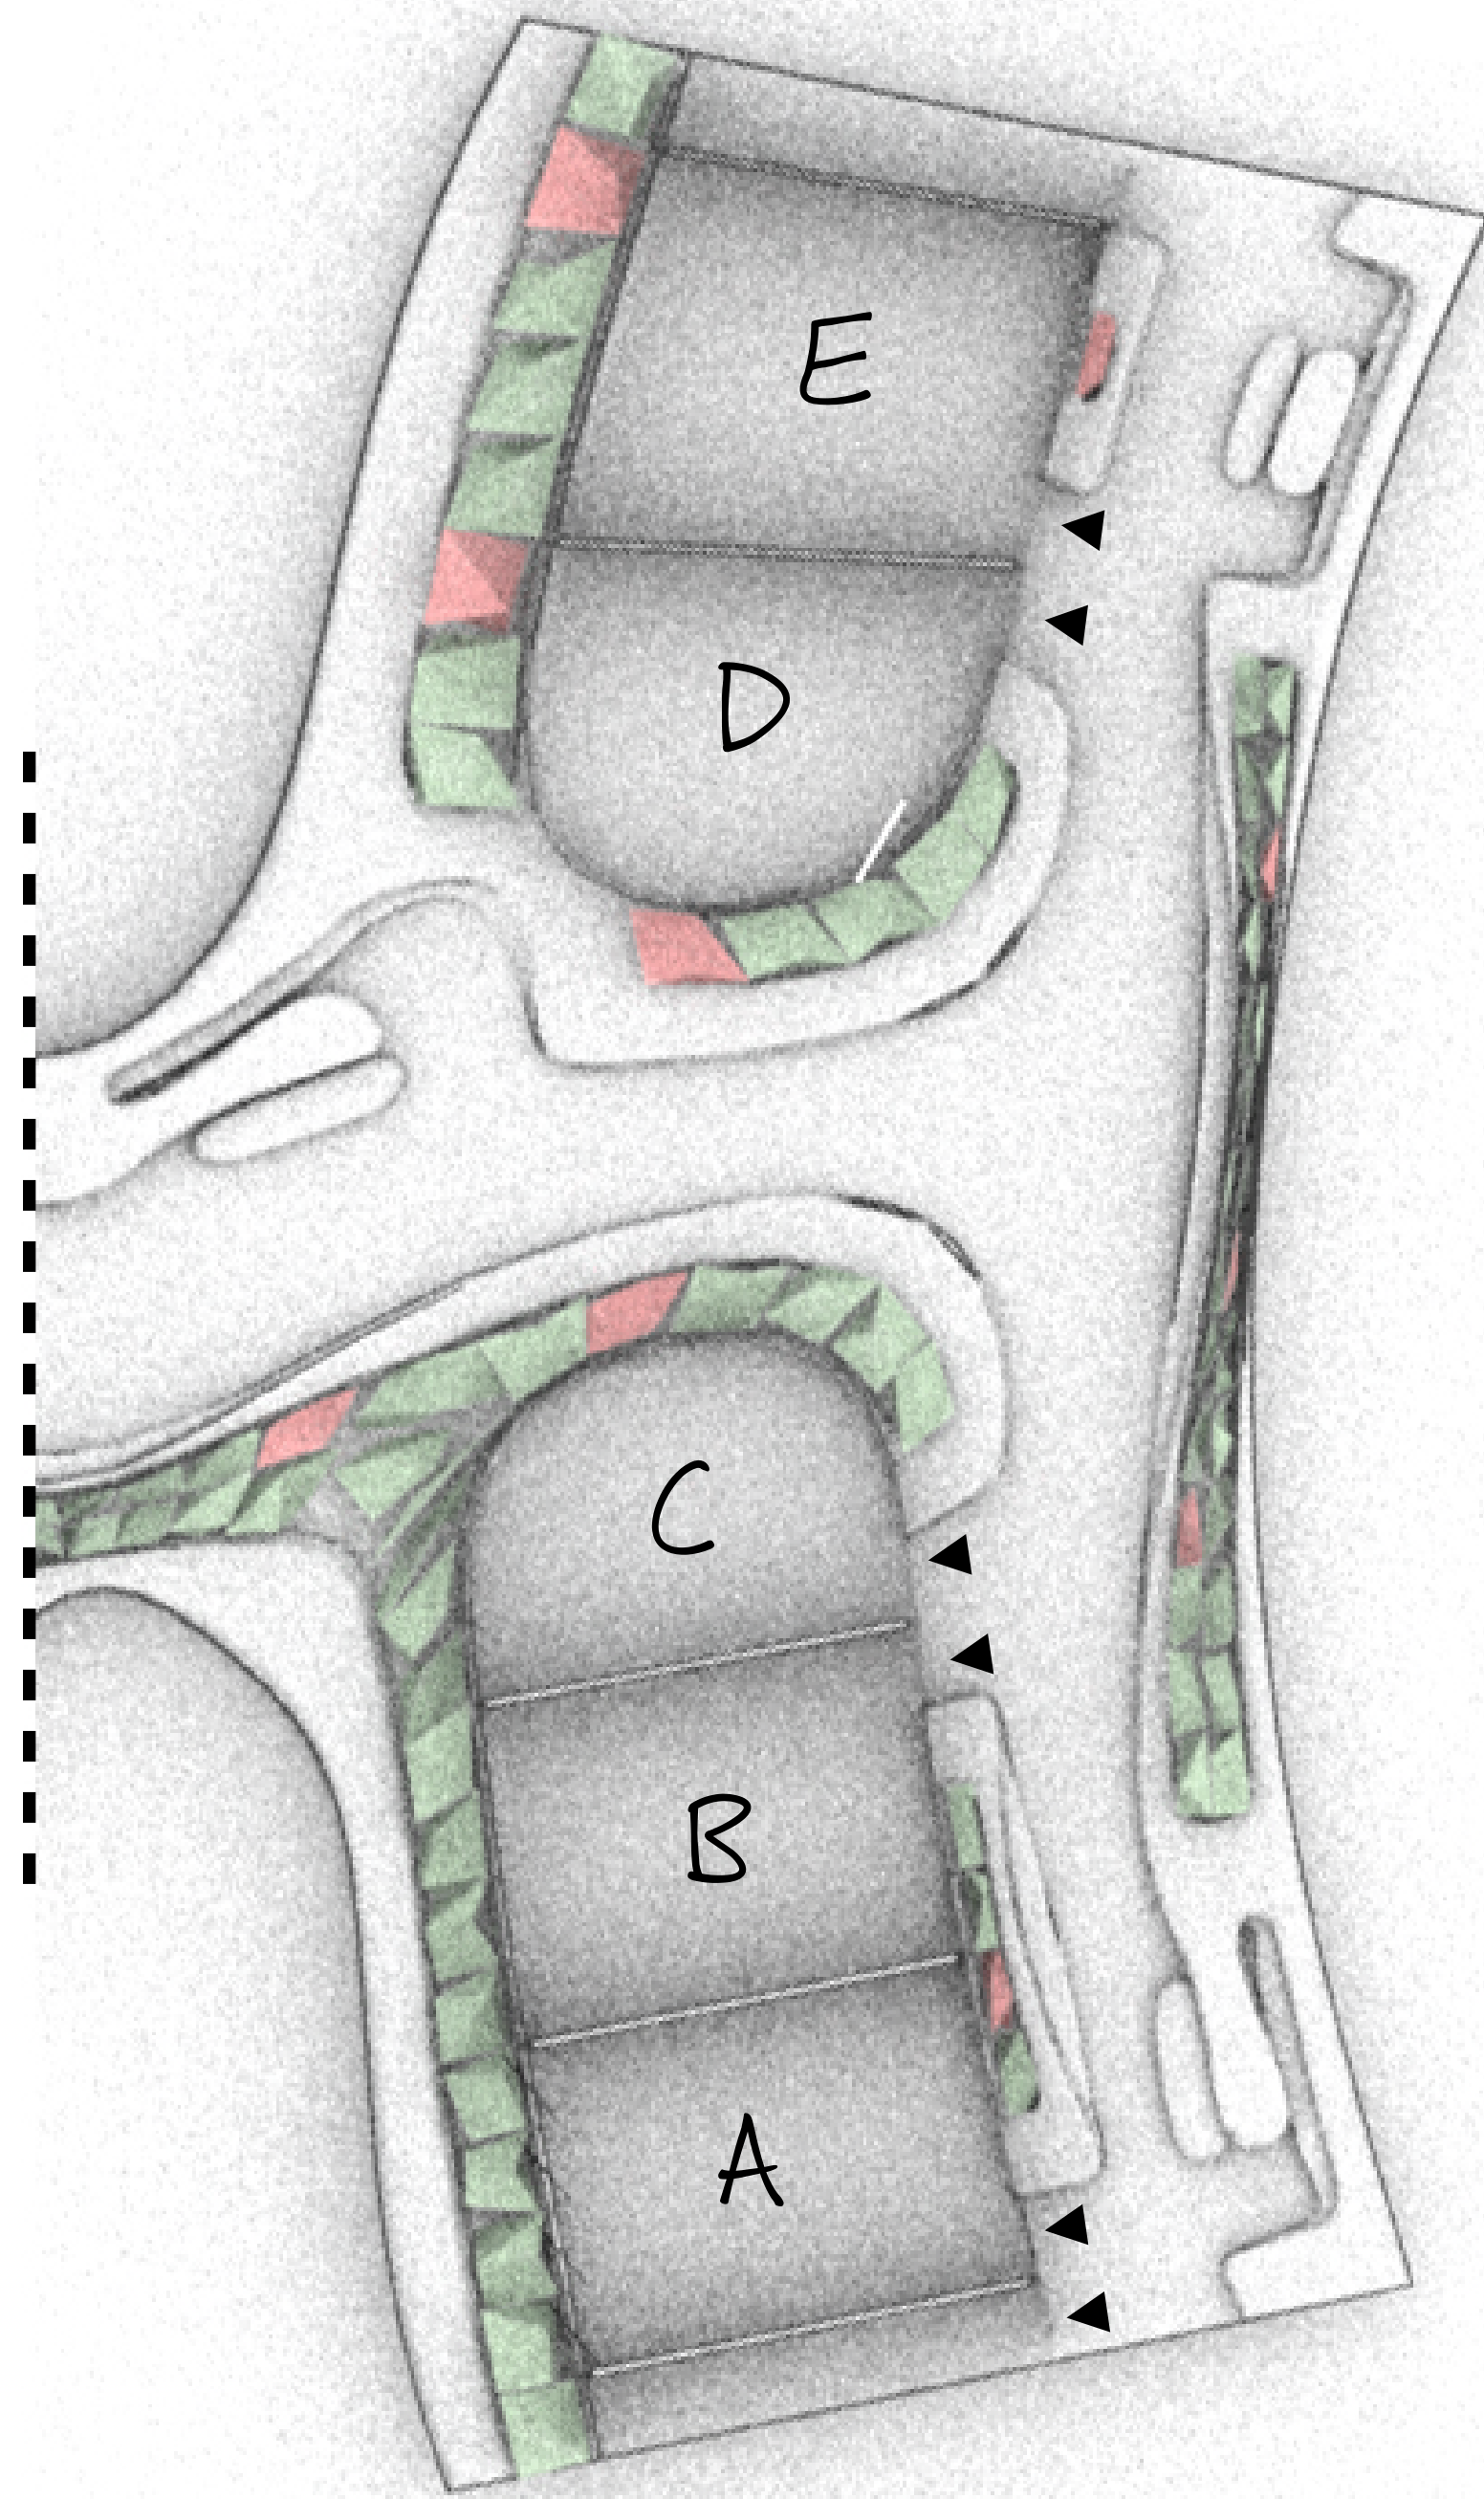

Plywood 12mm finish
 Insulation 80 mm
 Prefabricated Concrete 100mm

12mm 80mm 100mm

Computational script will run all possible variations of heights for minimum and maximum allowed radiation of the interior of the dwellings

First Floor

- A Master 44m²
- B Master 42m²
- C Master 38m²
- D Master 40 m²
