A well-structured process to better meet the qualitative criteria of offshore wind tenders in the Netherlands

A systems engineering approach

by

E.E.M. Brassier

Master thesis submitted to Delft University of Technology in partial fulfilment of the requirements for the degree of

MASTER OF SCIENCE

In Complex Systems Engineering and Management

Faculty of Technology, Policy and Management

To be defended in public on the 25th of May 2023 at 10:00

Student number:	5415217	
Thesis committee:	Prof. dr. ir. Zofia Lukszo	TU Delft (first supervisor)
	Dr. Aad A.F. Correljé	TU Delft (second supervisor)
	Prof. dr. Ad J.M. van Wijk	TU Delft (advisor)
	Ir. Stephanos Kythreotis	Vattenfall (external supervisor)

This thesis is confidential and cannot be made public until the 25th of May, 2026

Acknowledgements

Finalising this thesis marks the end of my journey in pursuing a master's degree in Complex Systems Engineering and Management at the Delft University of Technology. This thesis project has been a challenging and bumpy adventure, encompassing excitement, fulfilment, frustrations, and fatigue. Before proceeding, I want to thank everyone who has supported me over the past months.

First, I would like to thank my TU Delft committee supervisors for their valuable guidance, perspectives, and expertise. Specifically, I am deeply grateful to my first supervisor, Zofia Lukso, for allowing me to write this thesis with her. You taught me how to structure my work, encouraged me to reflect critically on my work and to be critical of my writing style. This knowledge will remain valuable throughout my entire (working) life ahead of me. Despite your hectic working schedule, you consistently made time to answer my numerous questions. I am thankful for your thought-provoking yet critical queries and for providing me with beneficial feedback. Your input kept me engaged, driving my work to greater quality. Thank you so much for your guidance throughout this journey and for providing me with the utmost support when needed. Secondly, I am grateful to my second supervisor, Aad Correljé, for offering valuable feedback throughout the project and posing critical questions that encouraged me to examine my work critically. I am also thankful for your comforting words at the end when I needed support. Thirdly, I would like to thank my advisor, Ad van Wijk, for his perspective and constructive feedback throughout the project. The combined efforts of all three supervisors have significantly contributed to improving my work.

Then I would like to thank my Vattenfall colleagues. In particular, I would like to sincerely thank my Vattenfall supervisor, Stephanos Kythreotis, for his extremely helpful guidance and support throughout the project. Your welcoming attitude made me feel comfortable within the company and team from the very beginning. Our numerous whiteboard sessions helped me to make certain research decisions and gave me insights into developing the well-structured process for the project. Your expertise in the systems engineering approach and various other fields significantly contributed to structuring this exciting project. I deeply appreciate your extensive feedback during the project and your consistent availability to discuss ideas and topics with me. Thank you so much for your guidance during the project. Moreover, I would like to thank Petr Kadurek for sharing his ideas, perspectives, and expertise throughout the project. Without you, this exciting project would not have started. Also, many thanks for evaluating the results at the end of the project. I would also like to thank Alex Koehler for sharing his expertise and perspectives throughout the project. Furthermore, I would also like to thank my other colleagues at Vattenfall. Thank you for your support, guidance and for making me feel comfortable at Vattenfall. I am thrilled to keep seeing you within Vattenfall after the thesis.

Furthermore, I would like to thank all interviewees for devoting their time and being open to sharing their experiences with me. Your valuable insights were greatly appreciated, and I thoroughly enjoyed your passion for the subject matter.

Finally, I would like to thank my friends and family. Thank you all for your patience, unconditional love, encouraging words, and support whenever I needed it during the project. Without every one of you, I would not be where I am today.
