

SHELTER LANDSCAPE: A LANDSCAPE APPROACH TO THE REFUGEE CAMP

IN THE PERI URBAN AREAS ALONG THE AUSTRIAN HUNGARIAN BORDER : THE REGION OF MOSON MAGYAROVAR AS A CASE STUDY

low water: development of the marshland, more room for the stairs and the pathway

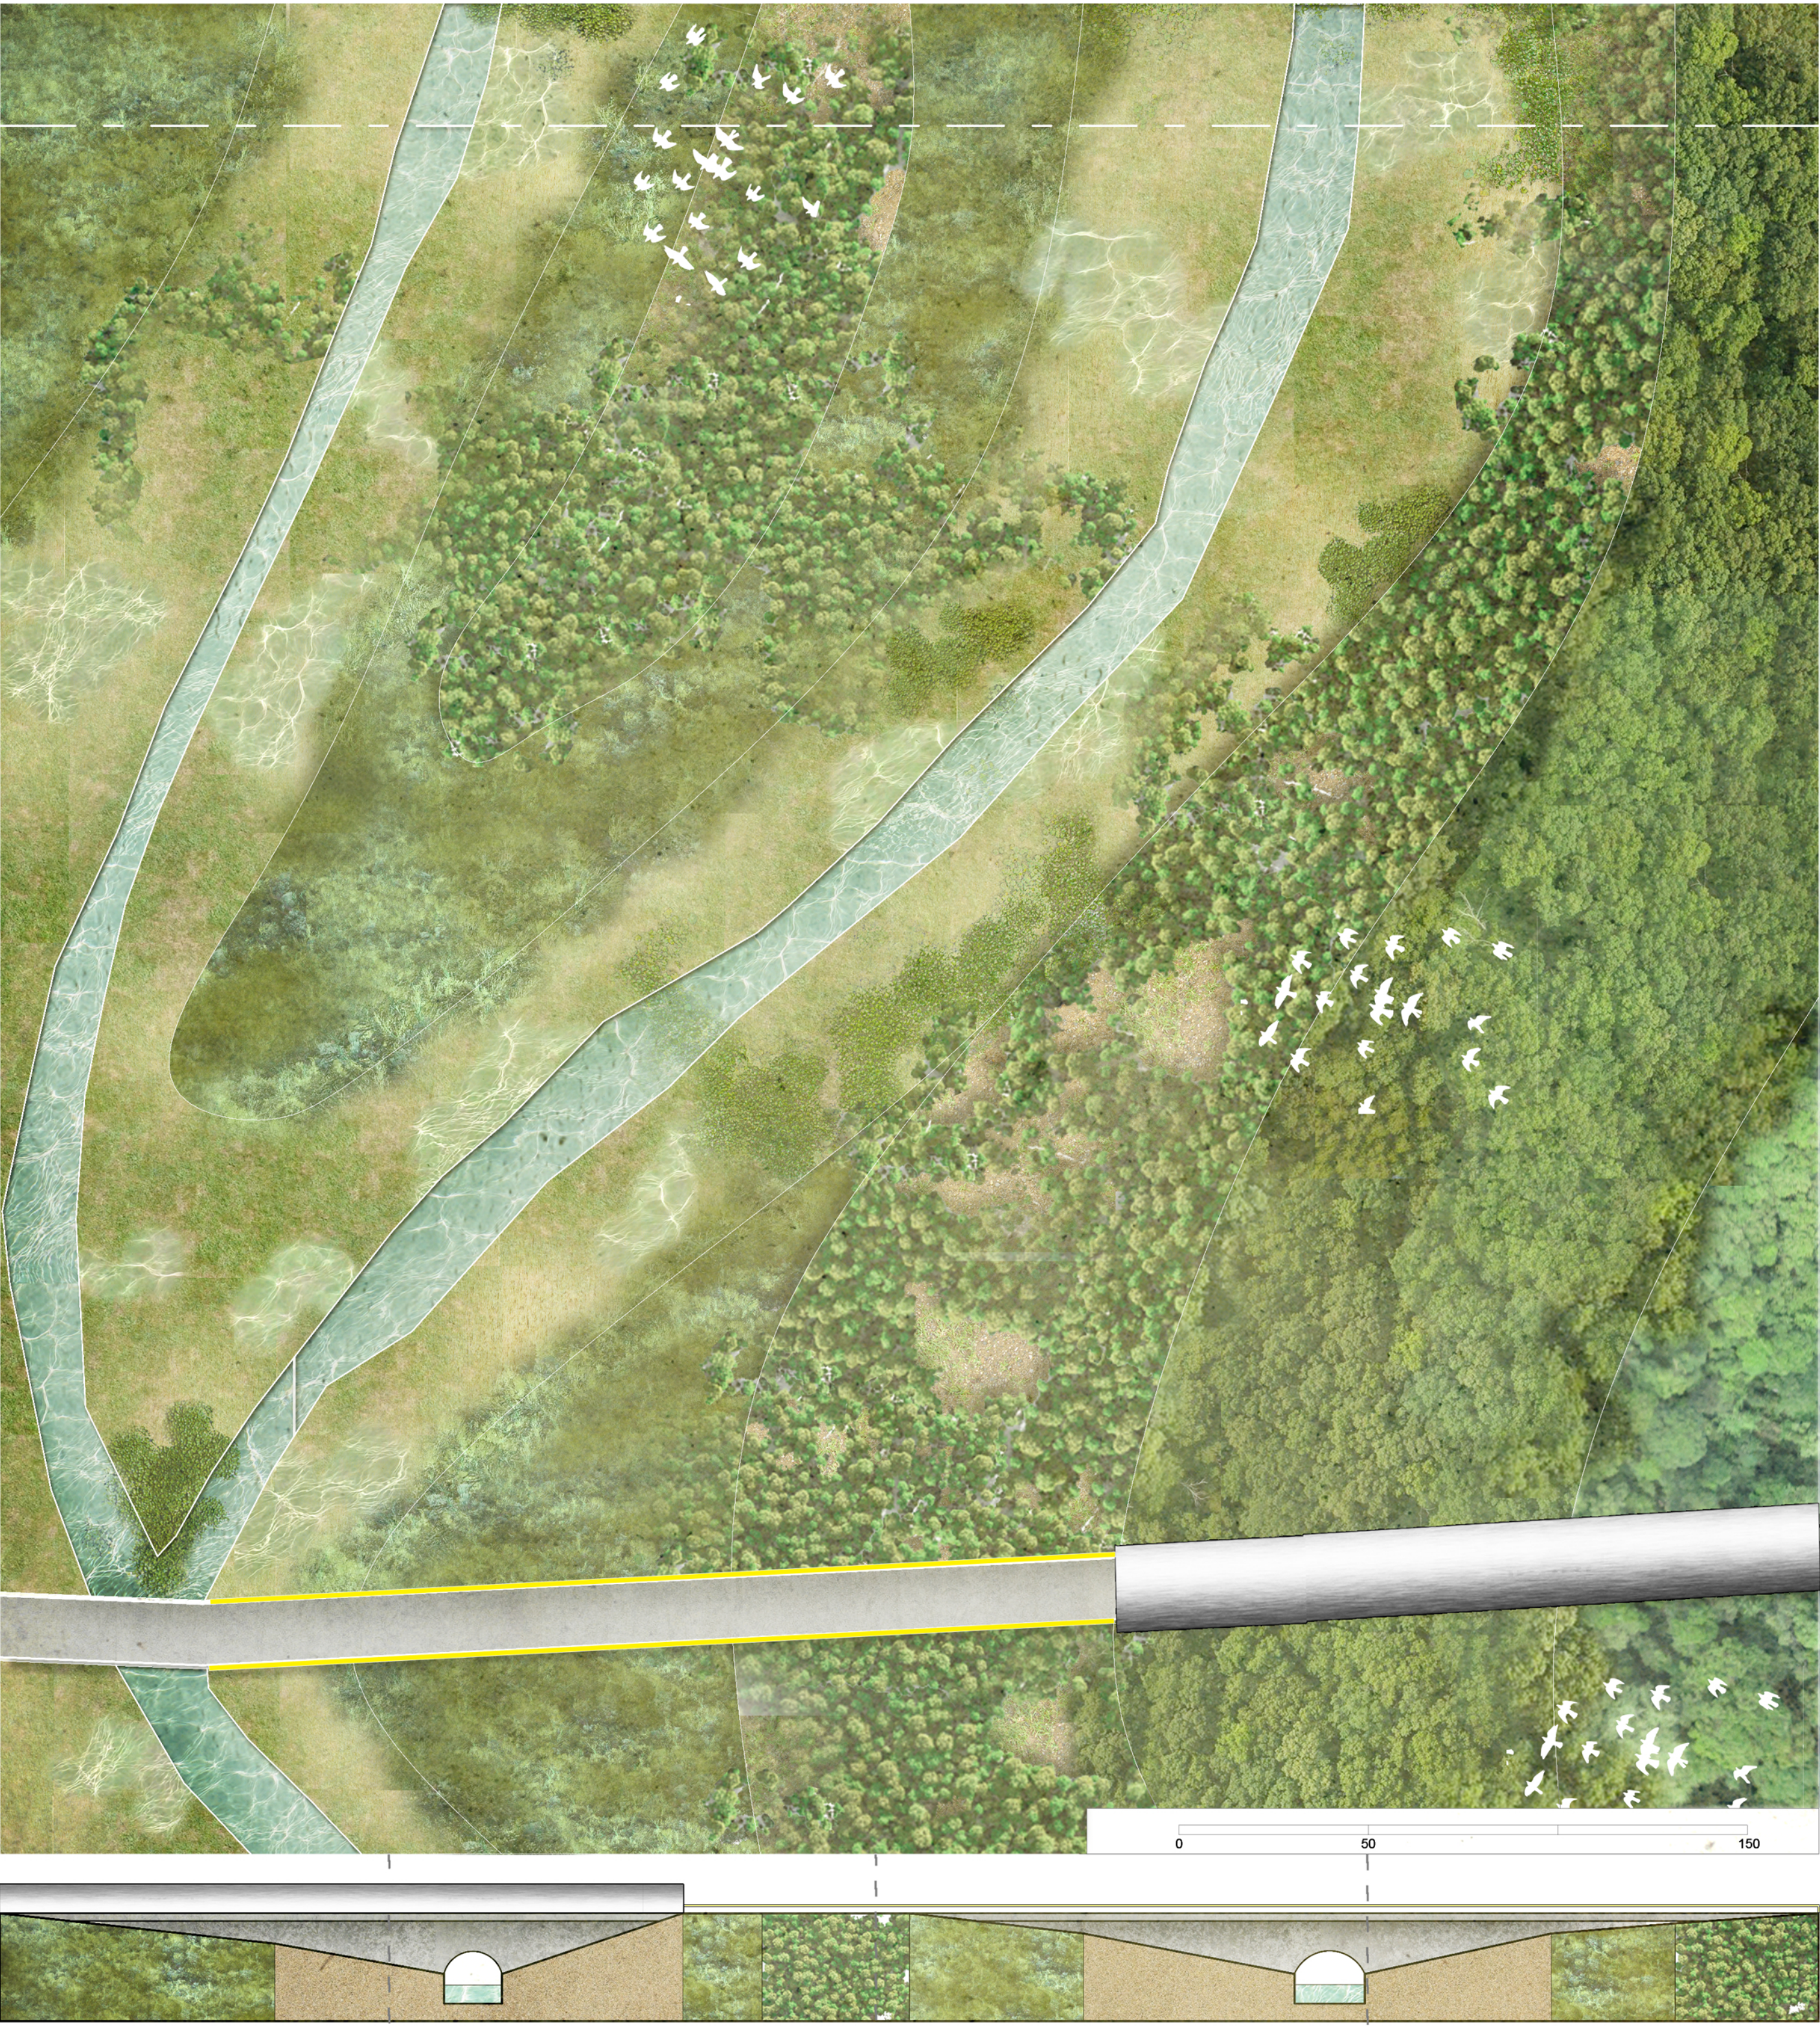

medium water level: more room for the gradients in between wet and dry habitats

the water fluctuation can go between few centimeters to more than 2 meters

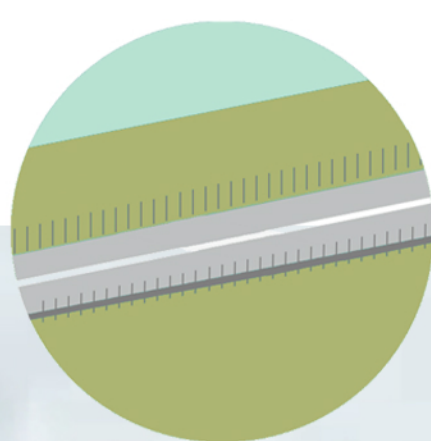

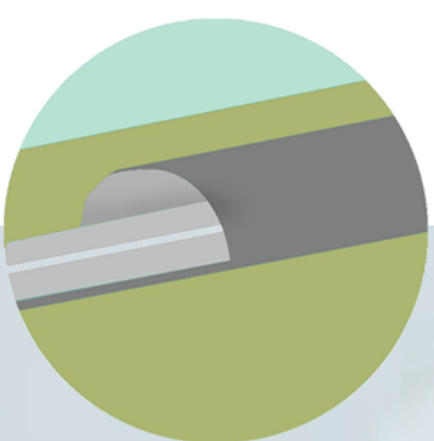

zoom in the green connection: the rehabilitated wetlands and solutions for mitigation

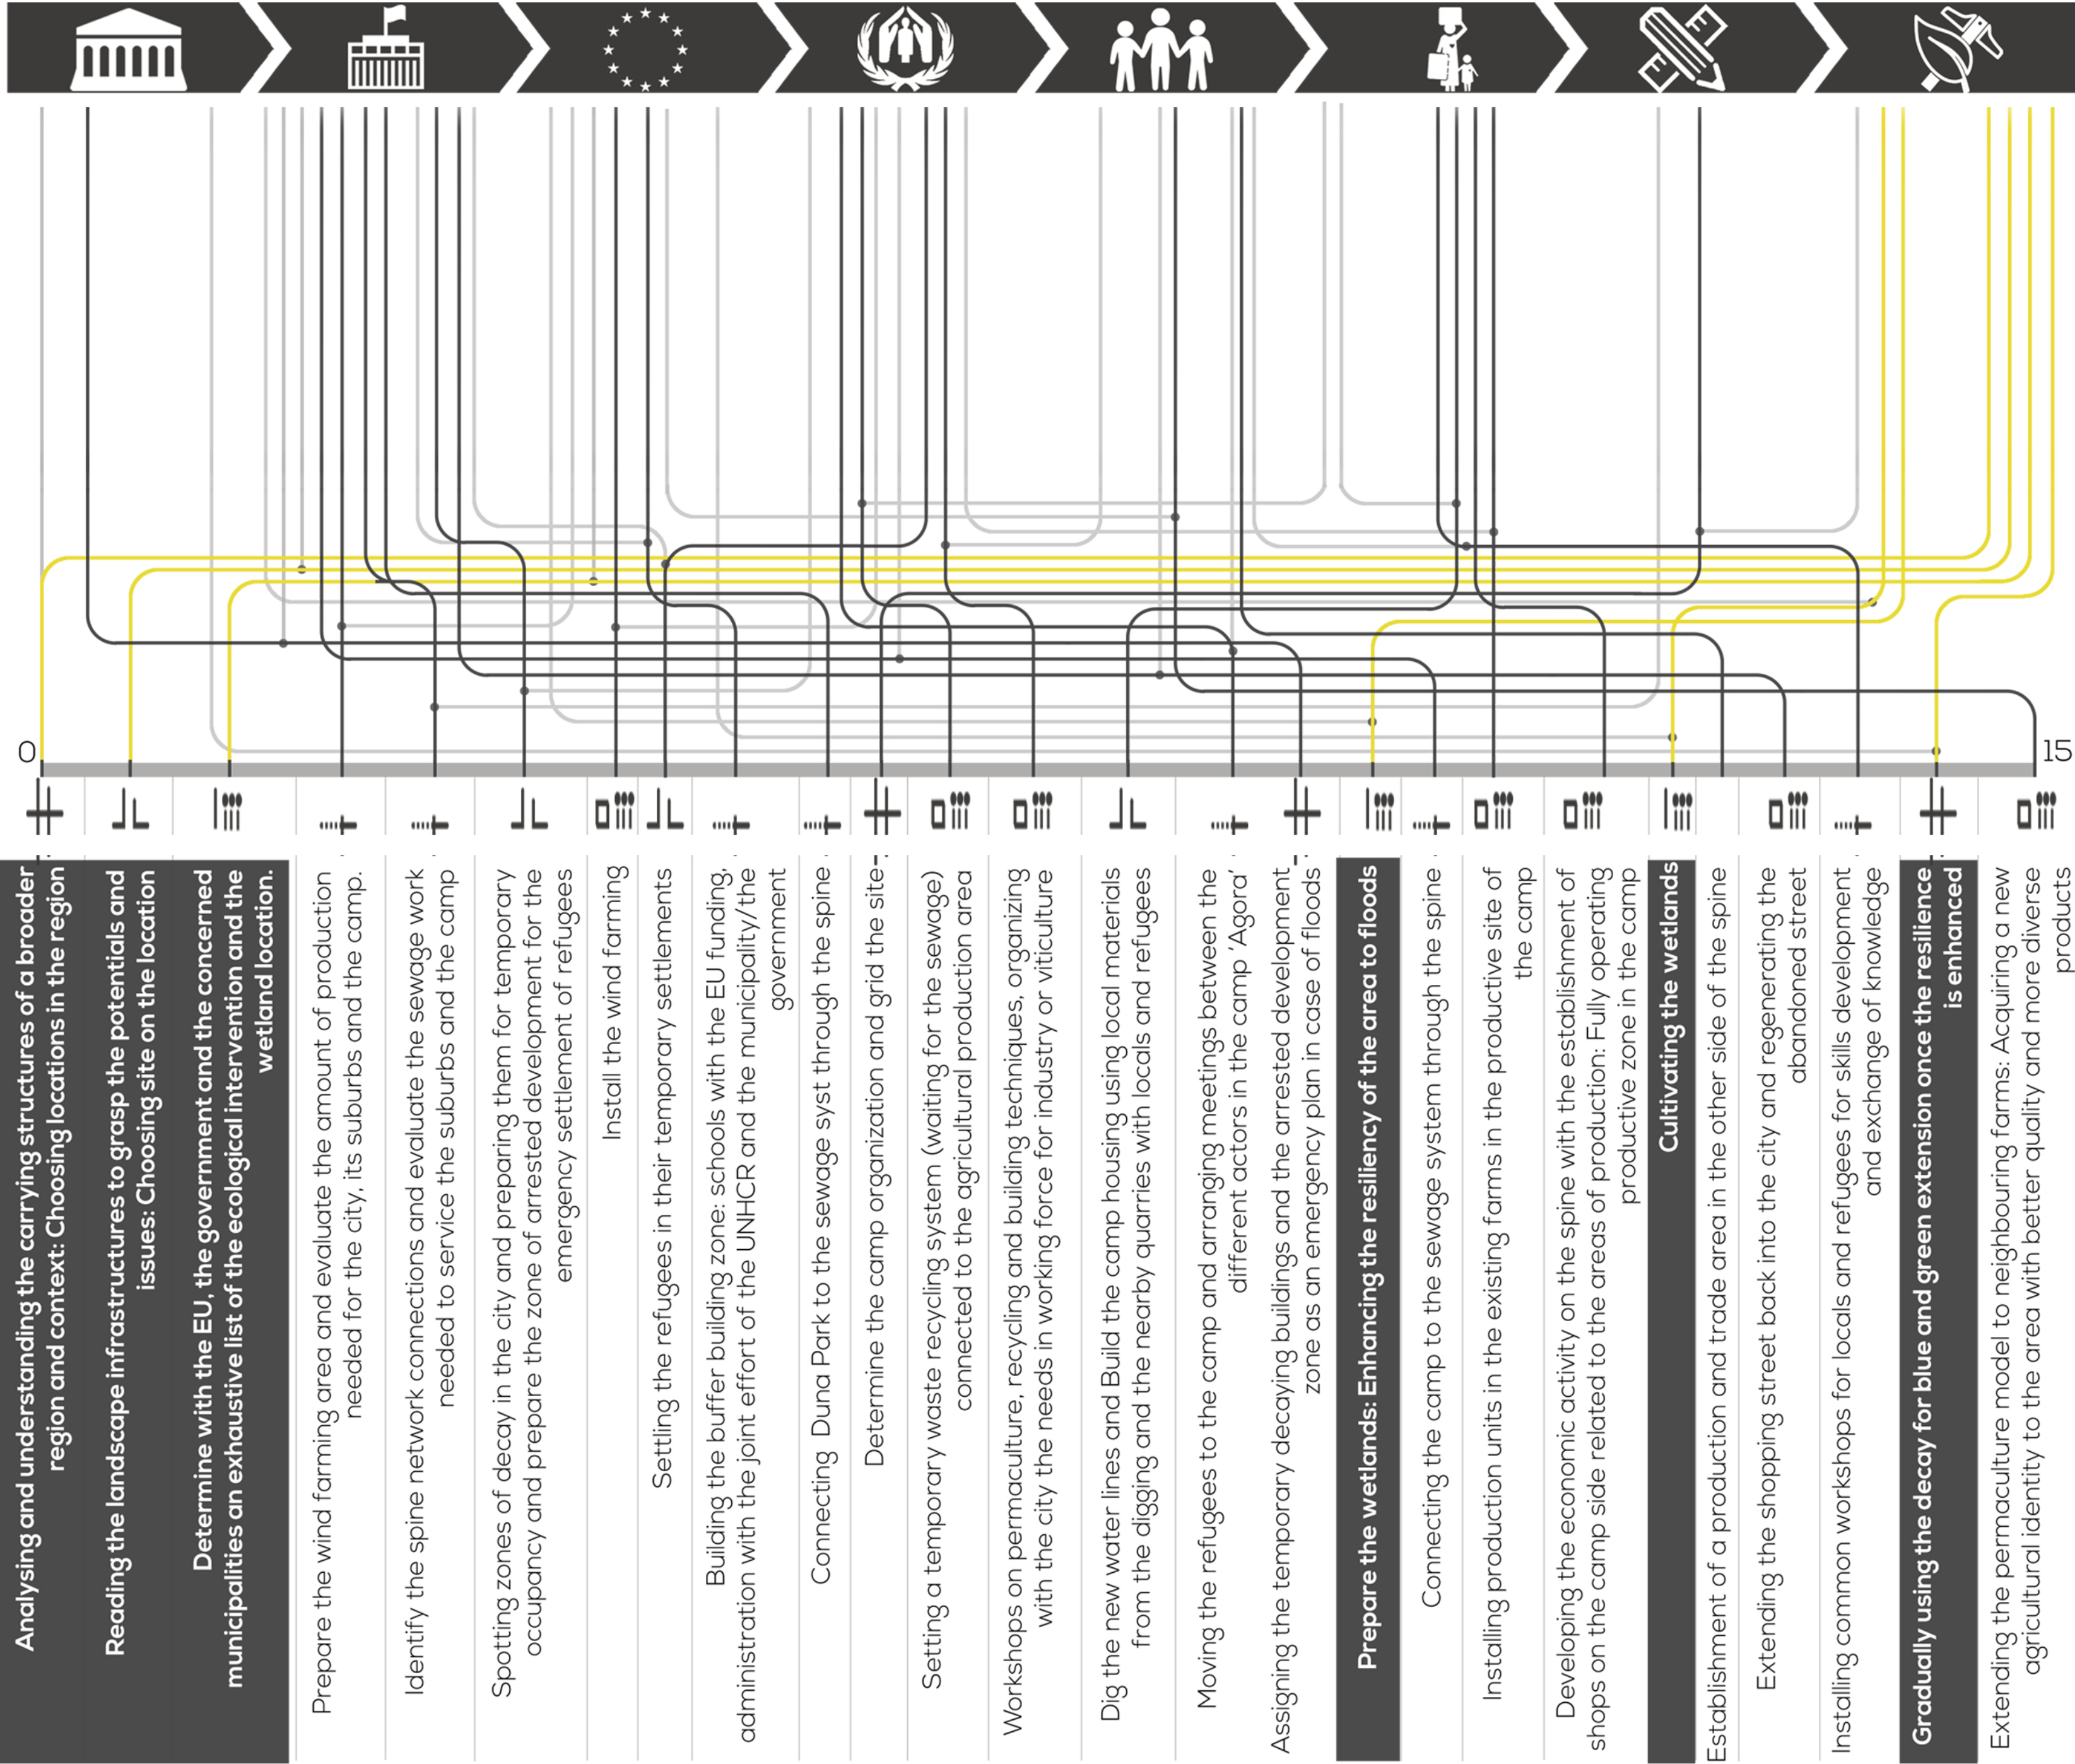

noise isolation

fences

culverts

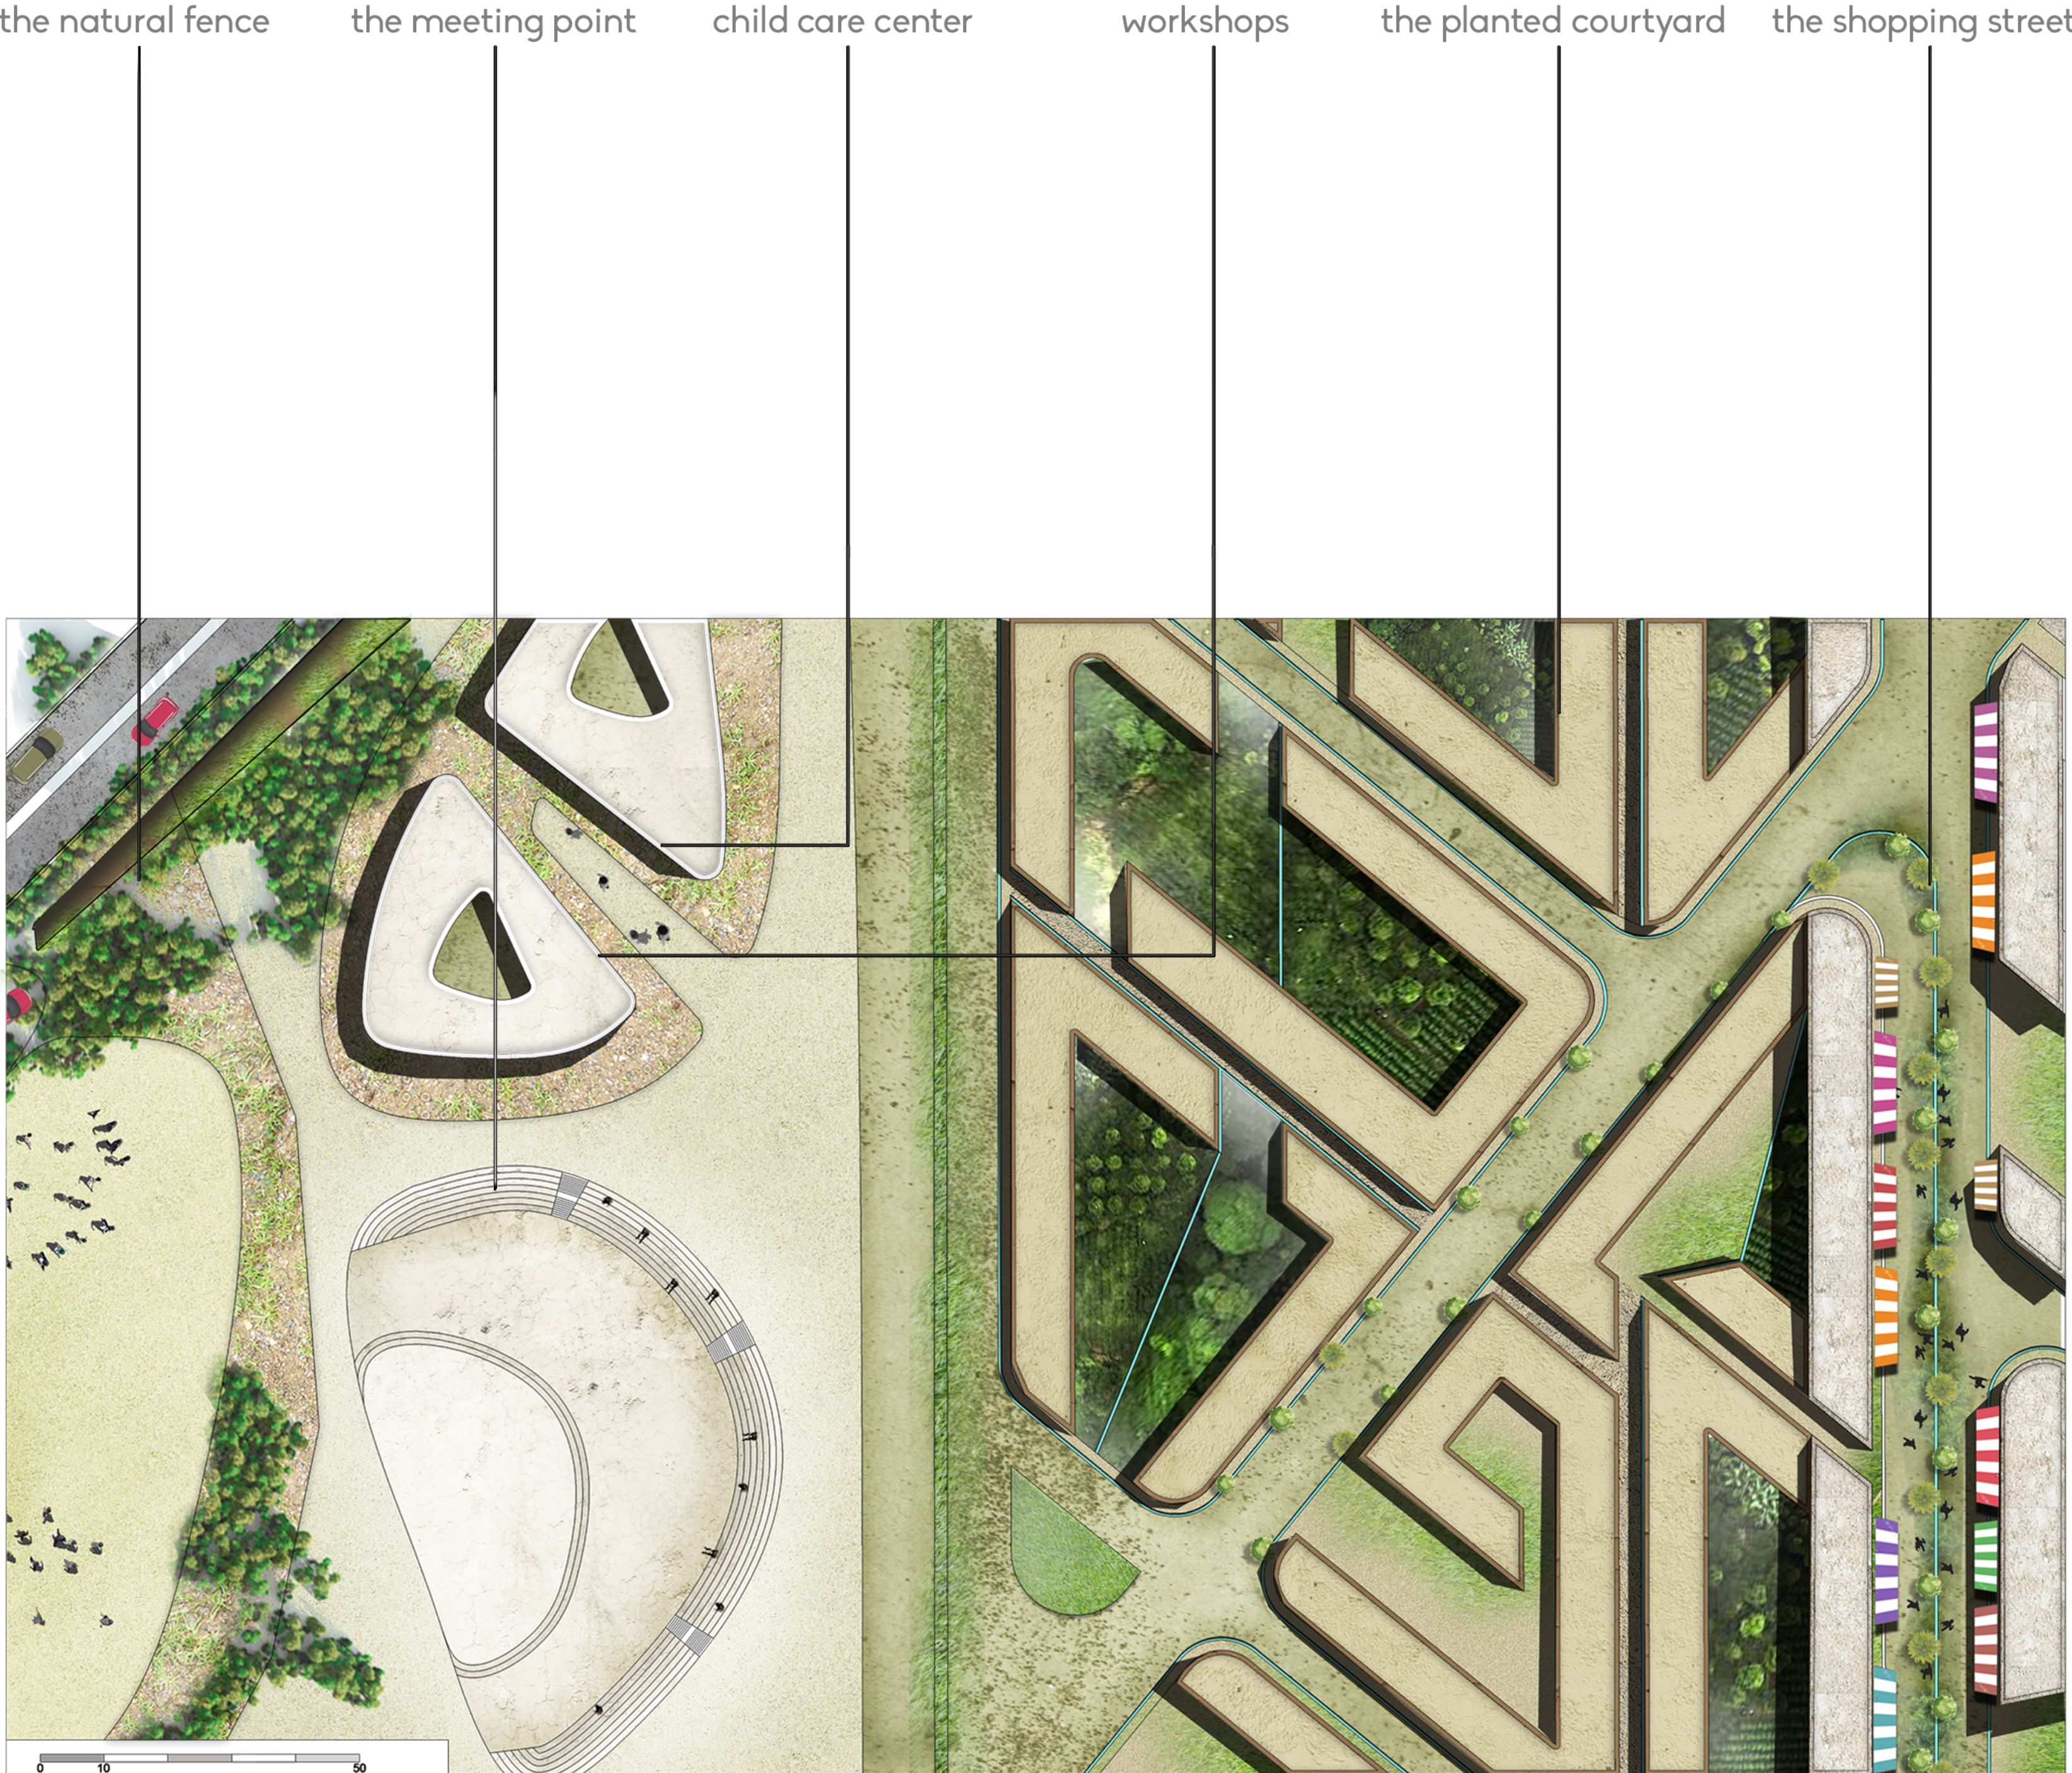

stakeholders diagram: connection actions to be taken to the main actors along a 15 years timeline

stakeholders diagram: connection actions to be taken to the main actors along a 15 years timeline

a zoom-in in the camp: the socio-economic detail and the different atmospheres through the camp

transitions from private to public: from the very crowded streets, to more private ones, the common courtyards, the women and children dedicated spaces, the very public Agora that can accomodate both the locals and the refugees

a section on the spine: and details on the bundle of networks: green energy, sewage connection, production and trade interface: the 'traditional' agriculture on one side, permaculture on the other side.
