Received: 4 April 2019; Accepted: 7 April 2019; Published: 18 April 2019

The authors wish to make the following corrections to this paper [1]:  
Update of Figure 1 and correct authorship to include Dr. Eleanor Blyth (CEH).

**Figure 1.** Example of usage of land surface temperature during dry episodes after a precipitation event. The plot shows a composite of the so-called Relative Warming Rate (RWR) as a function of the amount of precipitation during the preceding event for March–April–May (MAM, **left**) and June–July–August (JJA, **right**). RWR quantifies the increase in dry spell land surface temperature relative to air temperature, and is a measure for the evaporation regime of the land surface.

The authors wish to make the following corrections to this paper [2]:

Correction to the legend of Figure 15 to mention this is adapted from Rodriguez-Fernandez et al., 2018 ([2] and referenced as [182] in [1]).

The authors would like to apologize for any inconvenience caused to the readers by these changes.
