

# CITY OF THRESHOLDS

*MODEL PHOTOBOOK*

The following photographs are of a model I made. The model aims to highlight a passage into the core of the project. A variety of thresholds at different scales are constructed in the form of a theatre-set-like model.

The scenes constructed depict how I imagine my project may be used. The model isn't constructed in a manner which aims to show a polished, 'out of the showroom' type architecture, but rather an architecture which responds to the used nature of Brussels.

The model highlights aspects which I struggled to depict in drawings, and hence pictures a dimension of the project which brings together my research product, the photos seen in my photo booklet. The scenes I have created are directly influenced by displays of urbanity in the Brussels fabric. In this way I hope to have learnt from, and transposed my fascination of liminality in the thresholds of urban life.
