The goal of Accurator is to support the annotation process of external annotators to enrich the collection of the Rijksmuseum Amsterdam.

**Step 1**: Identify (part of) prints for annotation from Rijksmuseum collection

**WP6**: What are the characteristics of prints that need more/detailed annotations?

**WP5**: How can we determine that a person is part of a niche group?

**Step 2**: Assign these to appropriate niche groups

**WP7**: What kind of interface elements support creation of qualitative annotations?

**Step 3**: Gather annotations from persons in the niche groups

- Windmill niche group
- Maritime niche group

**Niche group**: A group of persons outside the institution with common interest in one or multiple topics, are knowledgeable and are motivated to perform tasks related to those topics.

**Step 4**: Rate the quality of annotations and select the most complete and accurate annotations

**WP8**: How can we determine the trustworthiness and quality of annotations?

**Artwork with complete annotations**
