**SPORTS & RECREATION COMPLEX**

This project is a design of a multi-sports sports complex and is located in the seaside area of Batuik. Different sports and recreational facilities are in the building and are combined with sustainable strategies. This project is designed to be a sustainable and healthy building. The building is designed to have a positive impact on the environment and society. The use of green spaces, water bodies, and natural lighting helps to create a sustainable and healthy environment inside the building.

**WATER**

Water plays an important role in the building, providing not only visual and aesthetic benefits but also a functional role in the design. The building has large areas of water, which help to create a relaxing and serene atmosphere. The greenery around the water bodies adds to the overall beauty of the building.

**DAYLIGHT**

The use of transparent glass walls and large openings allows natural light to flow into the building, creating a bright and airy interior. Daylight is used to not only provide natural light but also to create a connection with the exterior. The glass walls and large openings help to create a seamless transition between the interior and exterior.

**VENTILATION**

The building is designed to have natural ventilation through the use of towers. The towers not only provide ventilation but also act as water features. The water within the towers helps to create a cooling effect, improving the comfort level inside the building.

**HEAT STORAGE**

The building is designed to have heat storage, which helps to regulate the temperature inside the building. The heat storage is designed to capture the heat from the sun and store it for later use. This helps to reduce the dependence on artificial heating and cooling systems.

**OVERVIEW OF THE SPORTS COMPLEX**

**VIEW FROM THE LAKE**

**THE SKATE PARK ROOF**

**THE CENTRAL NCE WITH THE SKATE PARK ROOF ABOVE**

**THE CENTRAL NCE WITH THE CLIMBING TOWER AND THE SKATE PARK ROOF ABOVE**

**THE STADIUM WITH A COMBINATION OF DAYLIGHT AND ARTIFICIAL LIGHT**
