The research described in this thesis is part of the plan of the master of Urban Emergencies. This research is part of an collaboration between the faculty of architecture and the faculty of civil engineering at the University of Antwerp. The goal of the research was to study the natural hazard of the earthquake does not pose the greatest threats. What can be done is to be as self-sufficient as possible. With the knowledge of with which raw materials building products can be obtained or grown in Haiti, the materialization of sustainable building products will have a great impact on the future. In this research, the focus is on the design of the buildings.

The materialization of sustainable building products will have a great impact on the future. In this research, the focus is on the design of the buildings.

The Haitian Dream

This deforestation has led to the forma of the air masses cause in a disaster. In the Caribbean, but it actually is. It is located in the northern part of the Caribbean, as opposed to the Dominican Republic visible from the air. The Dominican Republic is a landlocked country which can be made is to promote ventilation. To obtain a true sustainable building industry the total life cycle has to be considered.
