Reclaiming Arcadia
Redefining the socio-productive landscape

1. Excavation work

2. Construction of concrete water storage tanks

3. Construction of rammed earth base using part of the excavated materials
   - The excavation walls are used as the outer formwork for the rammed earth

4. Construction of the reinforced concrete structure
   - Functions like a shell, resting upon the rammed earth foundation

5. Infills with the excavated rubblework
   - Substrate for the planting and the gravel terraces

6. Final interior and exterior surfaces and glazing
