In this region, the average yearly precipitation is around 1338 mm, the annual average sunshine is around 1545 hours, and the relative humidity averages for the year is 68%.

The climate is continental between Germany and Czech Republic. Besides, this region is part of the Alpine orogenic belt, with several mountains, including the Alps, having slopes. The climate and vegetation changes progressively from lowlands to inaccessible valleys and permanent snow cover on the mountain tops. The climate is Mediterranean in lowlands, continental near the mountains, and alpine in the mountains.

The precipitation in this region is high, with more than 1300 mm of rain per year. The summer temperatures are high, with an average of 19°C, and the winter temperatures can drop to -5°C. The relative humidity is high, around 70%, with a high level of pollution.
