THEORY

The negative effects of climate change and the old industrial economy are already visible on the land. The long-term vision and design is strongly influenced by the dual threats: natural systems and society. The proposed interventions include a series of strategies that link natural systems to new economic opportunities. The focus of designing productive landscapes is on the physical and the emotional. The approach is to reframe the urban conditions and develop new opportunities for the human and the natural. The three main principles of this project are: productive landscapes, infrastructure, and the new urban economy.

1. The Negative Effects of Climate Change and Natural Systems

2. The Old Industrial Economy and Urban Conditions

3. The New Urban Economy and Productive Landscapes

4. The Approach to Designing Productive Landscapes

ANALYSIS

1. The Negative Effects of Climate Change and Natural Systems

2. The Old Industrial Economy and Urban Conditions

3. The New Urban Economy and Productive Landscapes

4. The Approach to Designing Productive Landscapes

DESIGN

1. The River and Its Surroundings

2. The Urban Landscape

3. The Natural Environment

4. The New Urban Economy

ROOFTOP FARMING & FOOD

- Crops: tomatoes, peppers, garlic, paprika, tomatoes, carrots

LAND FARMING & FOOD

- Crops: potatoes, onions, garlic, paprika, tomatoes, carrots

AQUATIC FOOD

- Crops: fish, shrimp, oysters, clams, mussels, eels
