

Synergistic Urban Interventions:

- 1 The routing between the public squares is extended and strengthened by the oblique front facade of the Groninger Forum.
- 2 The public Stadhuis and Korenbeurs have classical facade elements such as columns, frieze, tympanum and stairs. The public Groninger Forum connects to these public buildings by reinterpreting these typological elements.
- 3 The new market square offers terrace space which is (unlike the other squares) undisturbed by car and bus traffic.
- 4 The projected video art on the Groninger Forum facade enhances the nightlife by connecting the nightlife area to the center.
