Sustainable education
An educational building on sustainable energy solutions in Haarlem Spaarnwoude

The building is located at the border of Haarlem, near the train station Spaarnwoude, a key node for potential development. This location, close to the city center, offers a significant advantage for sustainable energy projects. The building is situated in the new master plan, a strategic area for urban development.

The master plan is divided into three zones. The outskirt area has a big test field for sustainable energy solutions, while the inner-city area is where small-scale sustainable energy solutions are implemented, and the energy hub is where all the knowledge is bundled.

The building is located at the border of the new master plan and is part of the new gateway to Haarlem. The building houses two educational functions: a discovery museum and a faculty on sustainable energy. The lower part of the building houses the museum, and the upper part holds the faculty of sustainable energy.

Arrival on the highway A200 from Amsterdam
Entrance Foyer on the ground floor
Approach to the building from the station
Approach to the building from the master plan
Leaving Haarlem on the motorway towards highway A200
