The United Nations is an organization that promotes international cooperation, addresses major issues such as peace, security, development, economic and social progress, human rights, and environmental sustainability. The environmental council will be one of the main organs for sustainability in the world and will become a unity again.

The UNEC building will be an icon for sustainability. By fitting the UNEC, the master plan will ensure that the UN area will become unity again. The UNEC building will be a meeting place, recognizable from the television. Around this chamber, on the First Avenue, the new building, the Council Chamber is the representative of the United Nations.

The new council will get a place in a new building next to the General Assembly building. The United Nations is an important organ for sustainability and the world gatherings, and the lobby will create a place where decisions will be made: the Council Chamber (formal) and the Lobby (informal). These spaces are the heart of the UNEC and will be the place where it actually happens.

Flexible spaces will not only give the environmental discussion a place, but will also make future development possible. The UNEC has optimal sun-orientation and passive building services. But the building is not as tight as possible. Generous opening and views on the surroundings will identify with it and wish to reuse and conserve the building.

A good building, on a good spot will always be valued. People will recognize it, it will become one with the city, scale, placement and materialisation and rhythm in the façade. The UNEC building will be an icon for sustainability. By fitting the UNEC, the master plan will ensure that the UN area will become unity again.
