Towards a simple complex

MANIFESTO

Here, the breaking point is the very first line of the individual's vision and planning. Recognizing this through a critical and informed approach, we must acknowledge that the real challenge lies in the mindset of the individual. This mindset must be changed from one of fear and survival to one of curiosity and exploration. The ultimate goal is to reach a more sustainable future, one where the individual not only survives but thrives.

What are we?

From a certain point of view we do not differ so much from the river. Even though we do not move from the eroded land and nestle between the reeds while the amount of oxygen in the water will be evaporated away from its siblings and brought to an unknown destination from where it will be reused in another place, we share the same traits of sustainability. Rivers, the breathing lungs of our landscape. It is here that life settles down, adapts, and develops. From a certain point of view we do not differ so much from the river. Even though we do not move from the eroded land and nestle between the reeds while the amount of oxygen in the water will be evaporated away from its siblings and brought to an unknown destination from where it will be reused in another place, we share the same traits of sustainability. Rivers, the breathing lungs of our landscape. It is here that life settles down, adapts, and develops.

What are we, architects? A collaborative living project should be part of the many circular processes in the environment. In contrast to the river, the disposal of our waste is not the end of its life cycle. Waste and products that we produce are not only a way to get rid of waste, but also a way to create new opportunities. The river does not destroy but creates. Waste should be seen as a resource that can be used to create new opportunities. We should use waste as a resource to create new possibilities. A collaborative living project should be part of the many circular processes in the environment.

The right to circularity

Whatever most effectively allows us to attain our immediate goals is the preferred way. In order to understand how we can do this, one needs to understand how to make buildings sustainable. This firstly asks for rescheduling ones personal priorities from lifestyles of an individual, it is obvious that some essential but occasionally used spaces and necessities — such as spacious living areas or luxury items — can be towards us. Last but not least, we are specialized in the built environment. We spend our lives working on the environment, the only difference is that our luxurious lifestyles bring.

Collaborative living as a key to change

As architects we have the possibility to create the built environment and therefore we have the chance to make a difference. We can use them appropriately. This firstly asks for rescheduling ones personal priorities from lifestyles of an individual, it is obvious that some essential but occasionally used spaces and necessities — such as spacious living areas or luxury items — can be towards us. Last but not least, we are specialized in the built environment. We spend our lives working on the environment, the only difference is that our luxurious lifestyles bring.

The role of the architect

As architects we have the possibility to create the built environment and therefore we have the chance to make a difference. We can use them appropriately.
