Bottlenecks transition OA

- Traditional lucrative business model subscriptions alive
- Exclusive transfer of rights hinders Open Access and reuse of publications
- Impact and citations for scientists still crucial, not the way of dissemination
- Any changes in the interests of stakeholders?

There are two primary vehicles for delivering OA to research articles: OA journals (gold) and OA archives or repositories (green)

Chemical Science moves to Gold Open Access

By Valerie Simpson.

Chemical Science, launched in 2010, is set to become the world's first high-quality Open Access chemistry journal.

From the first issue in January 2015, our flagship journal will move to Gold Open Access. All content published from that date will be free to every reader.

Plus, unlike other Gold Open Access journals, we will waive all Article Processing Charges (APCs) for at least two years. So it will be free for authors too.

Nature Communications to become open access

Nature Publishing Group is proud to announce that from 20th October 2014 *Nature Communications*, the number three multidisciplinary journal*, is to become open access.

Nature Communications becomes NPG's flagship open access title, and confirms the company's commitment to providing high quality open access research alongside its subscription portfolio.

NATURE COMMUNICATIONS: CITATION ANALYSIS

Independent Analysis Shows Open Access Articles Published in Nature Communications Have More Views and Downloads

Filed by [Gary Price](#) on  July 30, 2014

For your open access folder.

From [Nature Publishing Group](#):

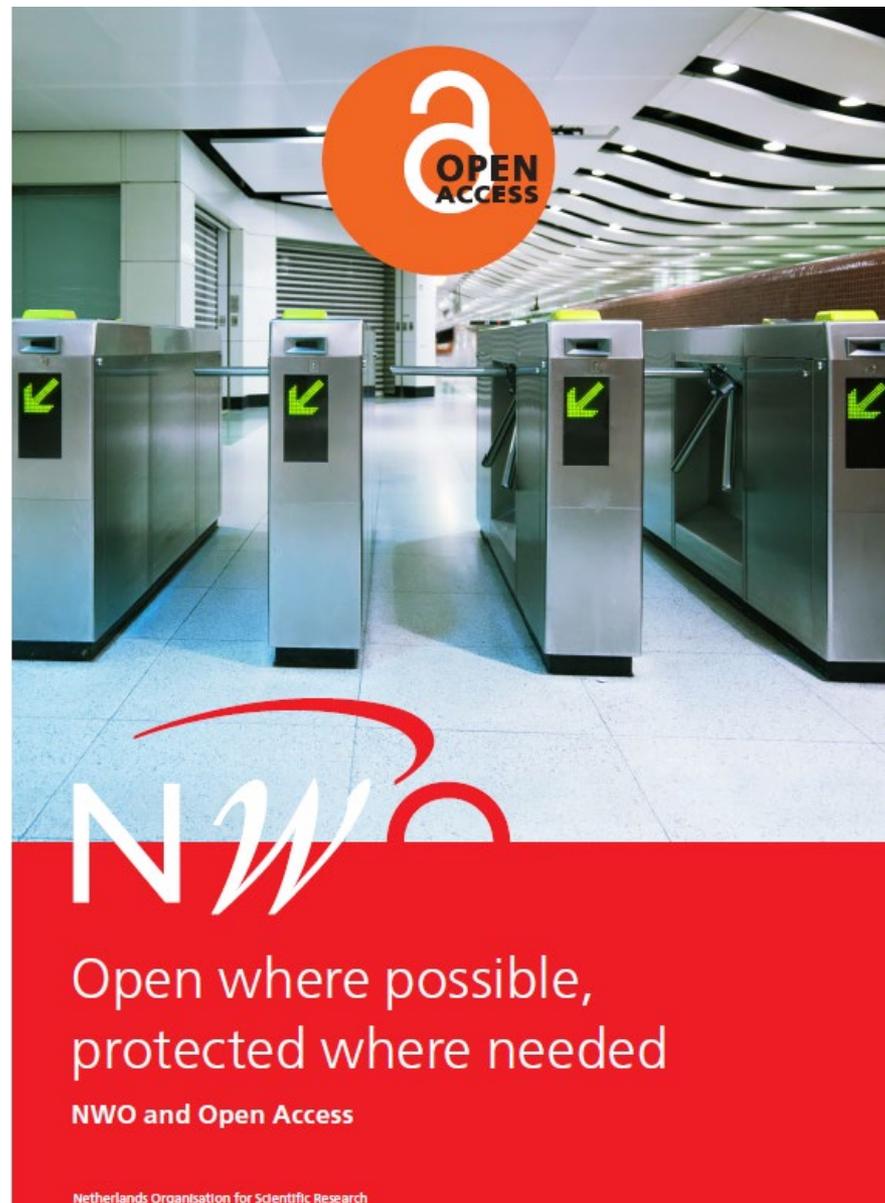

[An independent statistical analysis](#) of the articles published in [Nature Communications](#), carried out by the [Research Information Network \(RIN\)](#) has found that open access (OA) articles are viewed three times more often than articles that are only available to subscribers. RIN also found that OA articles are cited more than subscription articles.

100% Open Access in 2022: Denmark sets out ambitious targets

Updated on 08 September 2014

Danish minister announces ambitious Open Access targets

Denmark has joined a long line of European countries and announced a national strategy for Open Access. It follows in the footsteps of the European Commission and recommends Green Open Access as the main route.

Danish Minister is strong support of Open Access

Earlier this year - at the ESOF conference in Copenhagen - Sofie Carsten Nielsen, Denmark's Minister of Higher Education and Science announced the long awaited Danish Open Access strategy. In her presentation she underlined her support to Open Access by pointing out the Open Access started as a movement but today is an integral part of the overall framework for research. "We need to push this agenda forward" stated Sofie Carsten Nielsen.

Ambitious goals

What is remarkable in the Danish strategy for Open Access are the ambitious goals to reach Open Access to 80 % of all publically funded peer reviewed articles in 2017 and concluding this with 100 % in 2022.

De schade die een invasie van exotische planten of dieren kan aanrichten is groot. Het is een aanslag op de inheemse biodiversiteit en het kan riskant zijn voor de menselijke gezondheid, de visserij, de landbouw en de voedselvoorziening. De jaarlijkse kosten in de EU om dit te voorkomen en de schade te herstellen zijn 12 miljard euro. Gewaarzijn en kennis van de risico's van biologische invasies kunnen veel ellende voorkomen. Het is iets wat jou en mij en iedereen aangaat.

TU Delft Library and IOS Press sign agreement on Open Access books Delft authors

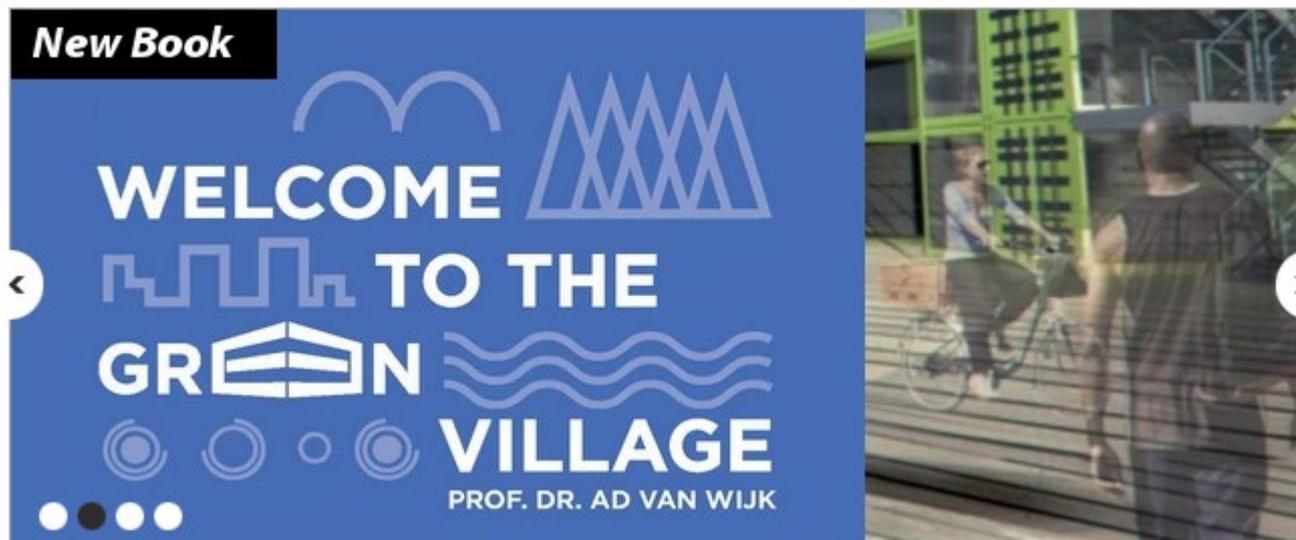

JANUARY 21, 2014

TU Delft Library and IOS Press have signed an agreement to publish at least ten Open Access (OA) books - as ebooks – by authors affiliated with TU Delft. Both parties hope to stimulate the use of OA within all TU Delft departments.

“When talking about scientific publishing, one can no longer exclude Open Access from the equation. TU Delft prefers OA because titles are widely available directly upon publication without restrictions,” says Just de Leeuwe of TU Delft University. TU Delft has been supporting the use of Open Access since 2004. The Library does its own research into the effectiveness of OA and manages several repositories and the [TU Delft OA fund](#).

Since 2010 IOS Press has increasingly been publishing OA books and journals. The publishing company has a special relationship with TU Delft: in 2005 all activities of Delft University Press were taken over by IOS Press. Publications affiliated with TU Delft are now published under the Delft University Press imprint.

Description

A sustainable world can only be achieved by an open collaboration between science, business and the public. That is why we create the Green Village: an innovative, lively, interactive and challenging environment where entrepreneurs, innovators, companies, artists, teachers and visitors can meet, work and play to develop, apply and experience innovative sustainable products and solutions.

INDUSTRY TRENDS

Open-access journal revenue to triple by 2017

12 September 2014

Tweet 64

A new report from media and publishing intelligence firm Simba Information indicates that a global campaign to increase open access to scientific research has created a fast-growing revenue stream for scientific, technical and medical journal publishers.

The debate about how free is free (costs) and how open is open (copyrights) are ongoing. However open access is already having a bigger impact in terms of publishing output. By some estimates, it already represents 10 per cent to 20 per cent of all research articles published.
