Suburban Metabolism in the Greater Toronto Area

Project Description

The issue of suburban regions in Toronto, particularly in the Greater Toronto Area, is a complex and multifaceted one. The region is characterized by a significant amount of sprawl, with new developments often occurring at the expense of existing urban areas. The metropolitan area is home to over 4 million people, making it one of the most populous in North America. The region is divided into several different municipalities, each with its own unique characteristics and challenges.
