Chapter two: RESEARCH FRAMEWORK

This chapter is part of a framework of the master's thesis, selected after its study. The production cycle of building materials was used as a framework to theoretically integrate those three hows building materials were selected in a leading theme because of their diverse importance in the construction phase, and their potential for contributing to sustainable development in the long-term. The research project focuses on the beginning of the production cycle, the growing of raw materials, raw materials processing, the possible locations for manufacturing, and the third research project used building materials for the design of a climate-resilient building. This chapter focuses on the theoretical framework of strategic spatial planning is elaborated on to accommodate the post-disaster context and the regional scale. These results on the local scale are then extrapolated to the regional scale to arrive at a regional development vision. A stakeholder process is designed (figure 9). These results on the local scale are valid for the wider area of Fort au Prince region (figure 9).

Chapter three: RESEARCH SET-UP

This chapter is part of a framework of the master's thesis, selected after its study. The production cycle of building materials was used as a framework to theoretically integrate those three hows building materials were selected in a leading theme because of their diverse importance in the construction phase, and their potential for contributing to sustainable development in the long-term. The research project focuses on the beginning of the production cycle, the growing of raw materials, raw materials processing, the possible locations for manufacturing, and the third research project used building materials for the design of a climate-resilient building. This chapter focuses on the theoretical framework of strategic spatial planning is elaborated on to accommodate the post-disaster context and the regional scale. These results on the local scale are then extrapolated to the regional scale to arrive at a regional development vision. A stakeholder process is designed (figure 9). These results on the local scale are valid for the wider area of Fort au Prince region (figure 9).
