Computation of density currents in estuaries

Extended calibration for inhomogeneous
flow in a tidal flume

Report on mathematical investigation

R 897 part VII

Oktober 1980

CONTENTS

NOTATION

	page
1. <u>Introduction</u>	1
2. <u>Review of the measurements</u>	2
2.1 Description of the flume.....	2
2.2 Test used for calibration.....	2
3. <u>Description of the mathematical model</u>	5
4. <u>Numerical modifications</u>	7
4.1 Review of the modifications.....	7
4.2 Discretisation of the boundary condition for the diffusion equation, at bottom and surface.....	8
4.3 Discretisation of the Richardson number.....	9
4.4 New reference situation.....	12
5. <u>The tuning</u>	13
5.1 Review of the variations.....	13
5.2 Tuning of the vertical turbulent exchange coefficients.....	14
5.3 Tuning of the longitudinal dispersion coefficient.....	15
5.4 Conclusions of the tuning.....	17
6. <u>Conclusions and recommendations</u>	18
6.1 Conclusions.....	18
6.2 Recommendations.....	19

TABLES

FIGURES

FIGURES

- 1 Set-up of the tidal salinity flume with notation
- 2 Calibration with tidal flume data;
velocities at $x = 18.3$ m and at $t = 0.68T$
- 3 Calibration with tidal flume data;
concentration at $z = 18.3$ m and at $t = 0.68T$
- 4 Damping functions $F(Ri)$ and $G(Ri)$
- 5 Calibration with tidal flume data;
longitudinal concentration distribution at four characteristic times
- 6 Calibration with tidal flume data;
relative depth-averaged concentrations
- 7 Calibration with tidal flume data;
longitudinal concentration distribution at four characteristics times
- 8 Calibration with tidal flume data;
relative depth-averaged concentrations
